Lesson 1. How living things adapt

Diversity of Matter | Term 1

EXPLORE

Plants and animals have features that help them survive.

Look for: thorns, webbed feet, fur, long roots

PLAY & APPLY

Activity: match a feature to its possible use

Materials: pictures and observation sheet

Real life: observe local animals without disturbing them

Remember: Not all animals survive in the same environment.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about How living things adapt?

A. soil B. lungs C. air D. thorns

2. What is the best activity for practising How living things adapt?

A. match a feature to its possible use B. ignore the instructions and rush C. copy without discussing anything D. leave all materials untouched

3. Which other example helps us explore How living things adapt?

A. rain B. shoe sole C. bulb D. webbed feet

4. Which materials should the group prepare to study How living things adapt?

A. broken objects found at random B. nothing suitable for the task C. pictures and observation sheet D. unsafe tools without an adult

5. Where can you use what you learnt about How living things adapt?

A. avoid talking about the idea B. damage the classroom display C. ignore the safety guidance D. observe local animals without disturbing them

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in How living things adapt?

A. An observation is exactly the same as a guess. B. Safety instructions can be ignored during an activity. C. One example proves that all cases are identical. D. Plants and animals have features that help them survive.

2. A classmate makes a mistake in How living things adapt. Which reminder helps?

A. Safety instructions can be ignored during an activity. B. An observation is exactly the same as a guess. C. One example proves that all cases are identical. D. Not all animals survive in the same environment.

3. The class plans to explore How living things adapt. Which action fits?

A. guess without looking at evidence B. match a feature to its possible use C. mix unrelated ideas without planning D. skip the task and claim it is complete

4. Choose a pair of examples that fits How living things adapt.

A. lungs and new moon B. thorns and long roots C. air and soil D. medicine and covered water

5. Which materials are most helpful for How living things adapt?

A. pictures and observation sheet B. unrelated broken electronics C. random objects that cannot help the task D. sharp tools without supervision

6. How could a learner apply How living things adapt outside school?

A. ignore school or home safety rules B. observe local animals without disturbing them C. refuse to practise the lesson D. leave a mess after the lesson

7. Which key word should appear on a How living things adapt revision card?

A. orbit B. cell C. fur D. cloud

8. While studying How living things adapt, which choice shows careful learning?

A. copy answers without understanding B. observe, try, explain and check your result C. rush without listening D. change the answer without reviewing

9. Which label belongs on a poster about How living things adapt?

A. long roots B. sunlight C. soap D. blood

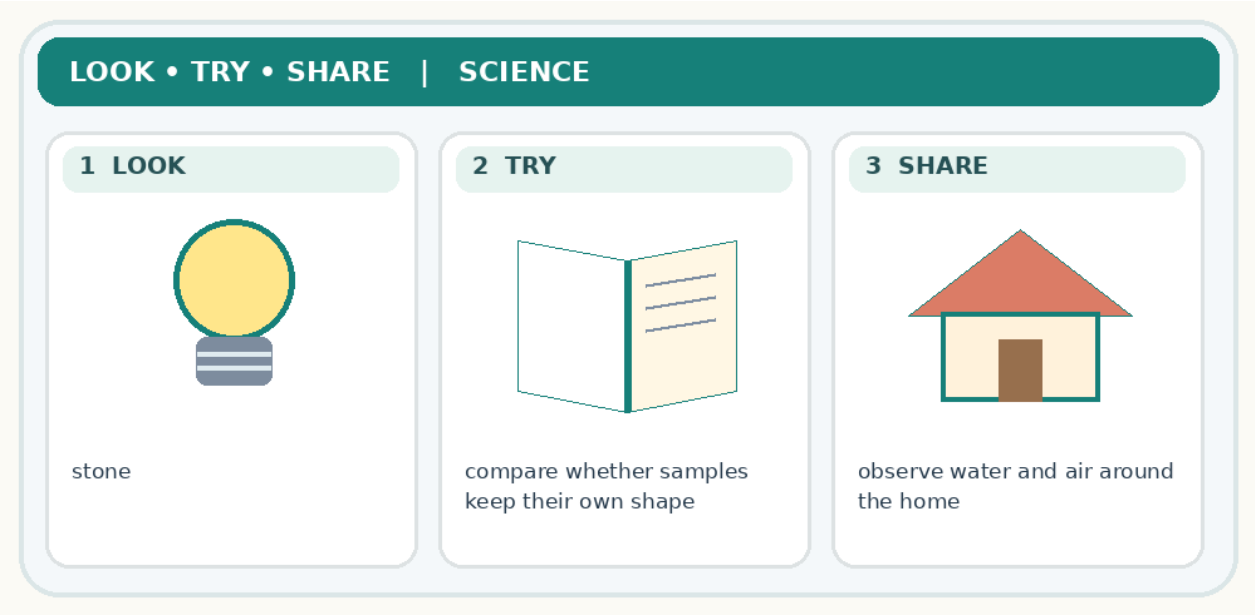

10. After practising How living things adapt, what is a useful next step?

A. claim that feedback is never helpful B. share one observation and listen to feedback C. leave the group without sharing D. tear up other learners work

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 2. Solids, liquids and gases

Diversity of Matter | Term 1

EXPLORE

Materials occur in different states with different properties.

Look for: stone, water, air, ice

PLAY & APPLY

Activity: compare whether samples keep their own shape

Materials: sealed bottle, cup, safe samples

Real life: observe water and air around the home

Remember: Air is matter even though we cannot see it.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Solids, liquids and gases?

A. plant B. switch C. planting D. stone

2. What is the best activity for practising Solids, liquids and gases?

A. compare whether samples keep their own shape B. copy without discussing anything C. ignore the instructions and rush D. leave all materials untouched

3. Which other example helps us explore Solids, liquids and gases?

A. water B. slope C. cooked food D. shadow

4. Which materials should the group prepare to study Solids, liquids and gases?

A. unsafe tools without an adult B. sealed bottle, cup, safe samples C. broken objects found at random D. nothing suitable for the task

5. Where can you use what you learnt about Solids, liquids and gases?

A. damage the classroom display B. ignore the safety guidance C. observe water and air around the home D. avoid talking about the idea

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Solids, liquids and gases?

A. Materials occur in different states with different properties. B. An observation is exactly the same as a guess. C. Safety instructions can be ignored during an activity. D. One example proves that all cases are identical.

2. A classmate makes a mistake in Solids, liquids and gases. Which reminder helps?

A. One example proves that all cases are identical. B. Safety instructions can be ignored during an activity. C. An observation is exactly the same as a guess. D. Air is matter even though we cannot see it.

3. The class plans to explore Solids, liquids and gases. Which action fits?

A. mix unrelated ideas without planning B. compare whether samples keep their own shape C. skip the task and claim it is complete D. guess without looking at evidence

4. Choose a pair of examples that fits Solids, liquids and gases.

A. stone and ice B. cell and evaporation C. planting and heart D. plant and switch

5. Which materials are most helpful for Solids, liquids and gases?

A. sharp tools without supervision B. sealed bottle, cup, safe samples C. unrelated broken electronics D. random objects that cannot help the task

6. How could a learner apply Solids, liquids and gases outside school?

A. observe water and air around the home B. leave a mess after the lesson C. refuse to practise the lesson D. ignore school or home safety rules

7. Which key word should appear on a Solids, liquids and gases revision card?

A. sunlight B. air C. health worker D. rain

8. While studying Solids, liquids and gases, which choice shows careful learning?

A. copy answers without understanding B. change the answer without reviewing C. observe, try, explain and check your result D. rush without listening

9. Which label belongs on a poster about Solids, liquids and gases?

A. bird B. soap C. ice D. energy saving

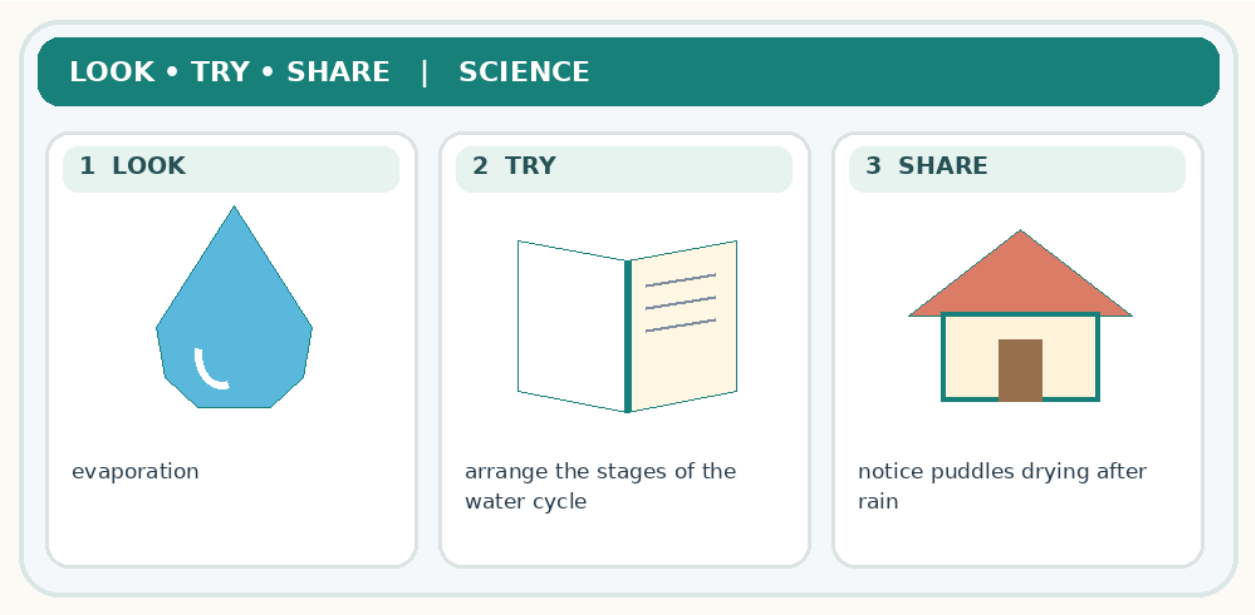

10. After practising Solids, liquids and gases, what is a useful next step?

A. claim that feedback is never helpful B. tear up other learners work C. leave the group without sharing D. share one observation and listen to feedback

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 3. The water cycle

Cycles | Term 1

EXPLORE

Water moves through evaporation, condensation and precipitation.

Look for: evaporation, condensation, cloud, rain

PLAY & APPLY

Activity: arrange the stages of the water cycle

Materials: water-cycle diagram and arrows

Real life: notice puddles drying after rain

Remember: Evaporation does not make water disappear forever.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about The water cycle?

A. drum sound B. flower C. evaporation D. water

2. What is the best activity for practising The water cycle?

A. copy without discussing anything B. leave all materials untouched C. ignore the instructions and rush D. arrange the stages of the water cycle

3. Which other example helps us explore The water cycle?

A. breathing B. condensation C. shoe sole D. falling ball

4. Which materials should the group prepare to study The water cycle?

A. broken objects found at random B. unsafe tools without an adult C. water-cycle diagram and arrows D. nothing suitable for the task

5. Where can you use what you learnt about The water cycle?

A. damage the classroom display B. notice puddles drying after rain C. avoid talking about the idea D. ignore the safety guidance

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in The water cycle?

A. Safety instructions can be ignored during an activity. B. Water moves through evaporation, condensation and precipitation. C. One example proves that all cases are identical. D. An observation is exactly the same as a guess.

2. A classmate makes a mistake in The water cycle. Which reminder helps?

A. Safety instructions can be ignored during an activity. B. Evaporation does not make water disappear forever. C. An observation is exactly the same as a guess. D. One example proves that all cases are identical.

3. The class plans to explore The water cycle. Which action fits?

A. guess without looking at evidence B. arrange the stages of the water cycle C. skip the task and claim it is complete D. mix unrelated ideas without planning

4. Choose a pair of examples that fits The water cycle.

A. evaporation and rain B. water and drum sound C. seedling and soil D. flower and warm air

5. Which materials are most helpful for The water cycle?

A. unrelated broken electronics B. random objects that cannot help the task C. sharp tools without supervision D. water-cycle diagram and arrows

6. How could a learner apply The water cycle outside school?

A. refuse to practise the lesson B. leave a mess after the lesson C. notice puddles drying after rain D. ignore school or home safety rules

7. Which key word should appear on a The water cycle revision card?

A. health worker B. cloud C. handwashing D. webbed feet

8. While studying The water cycle, which choice shows careful learning?

A. copy answers without understanding B. change the answer without reviewing C. observe, try, explain and check your result D. rush without listening

9. Which label belongs on a poster about The water cycle?

A. bird B. rough road C. rain D. shadow

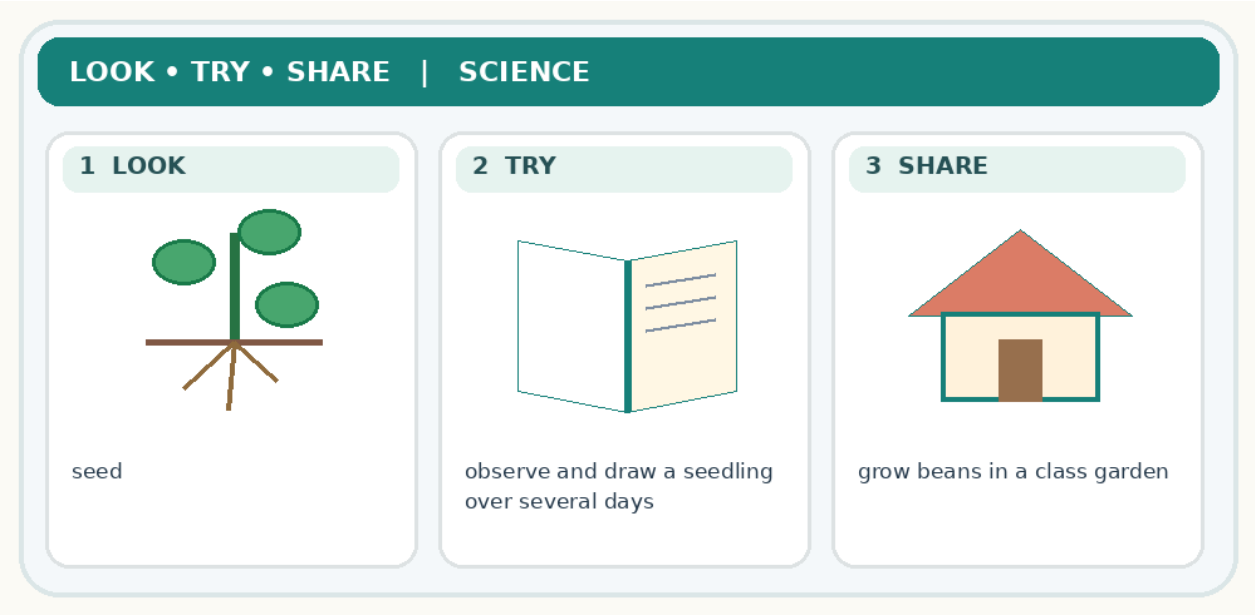

10. After practising The water cycle, what is a useful next step?

A. tear up other learners work B. claim that feedback is never helpful C. leave the group without sharing D. share one observation and listen to feedback

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 4. Plant growth stages

Cycles | Term 1

EXPLORE

Seeds can germinate and become mature flowering plants.

Look for: seed, seedling, plant, flower

PLAY & APPLY

Activity: observe and draw a seedling over several days

Materials: bean seed, cup and soil

Real life: grow beans in a class garden

Remember: Seeds need suitable conditions, not constant flooding.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Plant growth stages?

A. orbit B. water C. clean water D. seed

2. What is the best activity for practising Plant growth stages?

A. copy without discussing anything B. ignore the instructions and rush C. leave all materials untouched D. observe and draw a seedling over several days

3. Which other example helps us explore Plant growth stages?

A. slope B. seedling C. soil D. warm air

4. Which materials should the group prepare to study Plant growth stages?

A. bean seed, cup and soil B. broken objects found at random C. unsafe tools without an adult D. nothing suitable for the task

5. Where can you use what you learnt about Plant growth stages?

A. damage the classroom display B. grow beans in a class garden C. avoid talking about the idea D. ignore the safety guidance

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Plant growth stages?

A. Safety instructions can be ignored during an activity. B. Seeds can germinate and become mature flowering plants. C. One example proves that all cases are identical. D. An observation is exactly the same as a guess.

2. A classmate makes a mistake in Plant growth stages. Which reminder helps?

A. An observation is exactly the same as a guess. B. Safety instructions can be ignored during an activity. C. Seeds need suitable conditions, not constant flooding. D. One example proves that all cases are identical.

3. The class plans to explore Plant growth stages. Which action fits?

A. observe and draw a seedling over several days B. skip the task and claim it is complete C. guess without looking at evidence D. mix unrelated ideas without planning

4. Choose a pair of examples that fits Plant growth stages.

A. clean water and orbit B. seed and flower C. ice and long roots D. water and cloud

5. Which materials are most helpful for Plant growth stages?

A. unrelated broken electronics B. bean seed, cup and soil C. sharp tools without supervision D. random objects that cannot help the task

6. How could a learner apply Plant growth stages outside school?

A. refuse to practise the lesson B. leave a mess after the lesson C. ignore school or home safety rules D. grow beans in a class garden

7. Which key word should appear on a Plant growth stages revision card?

A. plant B. handwashing C. shadow D. webbed feet

8. While studying Plant growth stages, which choice shows careful learning?

A. copy answers without understanding B. rush without listening C. change the answer without reviewing D. observe, try, explain and check your result

9. Which label belongs on a poster about Plant growth stages?

A. flower B. condensation C. wire D. ventilation

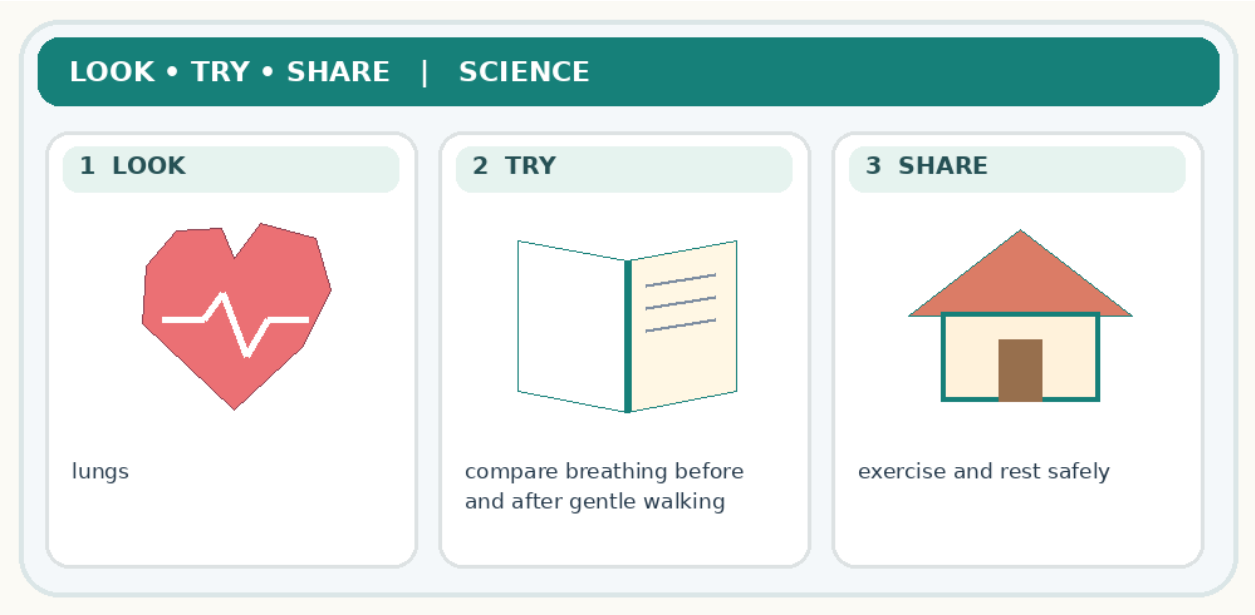

10. After practising Plant growth stages, what is a useful next step?

A. leave the group without sharing B. claim that feedback is never helpful C. share one observation and listen to feedback D. tear up other learners work

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 5. Breathing and circulation

Systems | Term 1

EXPLORE

Lungs bring oxygen into the body and blood carries materials.

Look for: lungs, heart, blood, breathing

PLAY & APPLY

Activity: compare breathing before and after gentle walking

Materials: body diagram and paper labels

Real life: exercise and rest safely

Remember: The heart does not pump air; lungs exchange gases.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Breathing and circulation?

A. air B. fur C. lungs D. webbed feet

2. What is the best activity for practising Breathing and circulation?

A. leave all materials untouched B. ignore the instructions and rush C. compare breathing before and after gentle walking D. copy without discussing anything

3. Which other example helps us explore Breathing and circulation?

A. plant B. seed C. flower D. heart

4. Which materials should the group prepare to study Breathing and circulation?

A. nothing suitable for the task B. broken objects found at random C. unsafe tools without an adult D. body diagram and paper labels

5. Where can you use what you learnt about Breathing and circulation?

A. exercise and rest safely B. damage the classroom display C. ignore the safety guidance D. avoid talking about the idea

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Breathing and circulation?

A. Lungs bring oxygen into the body and blood carries materials. B. An observation is exactly the same as a guess. C. One example proves that all cases are identical. D. Safety instructions can be ignored during an activity.

2. A classmate makes a mistake in Breathing and circulation. Which reminder helps?

A. Safety instructions can be ignored during an activity. B. One example proves that all cases are identical. C. An observation is exactly the same as a guess. D. The heart does not pump air; lungs exchange gases.

3. The class plans to explore Breathing and circulation. Which action fits?

A. guess without looking at evidence B. skip the task and claim it is complete C. compare breathing before and after gentle walking D. mix unrelated ideas without planning

4. Choose a pair of examples that fits Breathing and circulation.

A. fur and bulb B. lungs and breathing C. webbed feet and air D. drum sound and full moon

5. Which materials are most helpful for Breathing and circulation?

A. random objects that cannot help the task B. unrelated broken electronics C. sharp tools without supervision D. body diagram and paper labels

6. How could a learner apply Breathing and circulation outside school?

A. exercise and rest safely B. ignore school or home safety rules C. leave a mess after the lesson D. refuse to practise the lesson

7. Which key word should appear on a Breathing and circulation revision card?

A. falling ball B. medicine C. blood D. slope

8. While studying Breathing and circulation, which choice shows careful learning?

A. change the answer without reviewing B. copy answers without understanding C. rush without listening D. observe, try, explain and check your result

9. Which label belongs on a poster about Breathing and circulation?

A. warm air B. ventilation C. breathing D. long roots

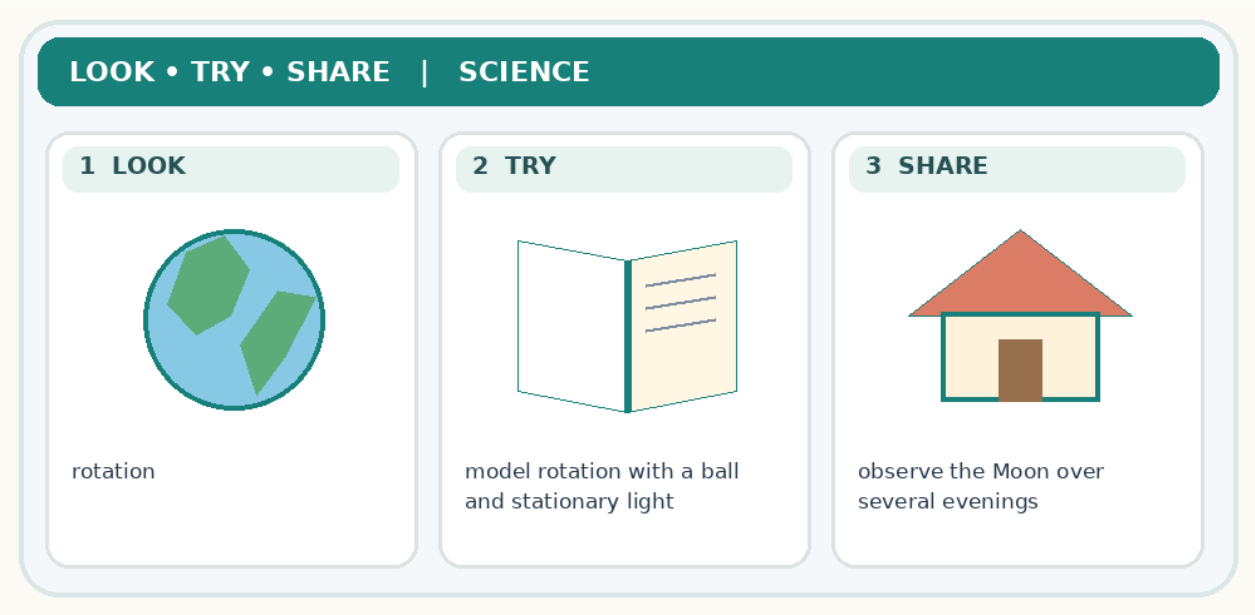

10. After practising Breathing and circulation, what is a useful next step?

A. tear up other learners work B. share one observation and listen to feedback C. leave the group without sharing D. claim that feedback is never helpful

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 6. Day, night and the Moon

Systems | Term 2

EXPLORE

Rotation creates day and night and the Moon has changing visible phases.

Look for: rotation, new moon, full moon, orbit

PLAY & APPLY

Activity: model rotation with a ball and stationary light

Materials: torch and model balls

Real life: observe the Moon over several evenings

Remember: Moon phases are not caused by Earth shadow every night.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Day, night and the Moon?

A. wire B. reducing waste C. medicine D. rotation

2. What is the best activity for practising Day, night and the Moon?

A. leave all materials untouched B. ignore the instructions and rush C. copy without discussing anything D. model rotation with a ball and stationary light

3. Which other example helps us explore Day, night and the Moon?

A. cell B. ventilation C. new moon D. falling ball

4. Which materials should the group prepare to study Day, night and the Moon?

A. unsafe tools without an adult B. torch and model balls C. broken objects found at random D. nothing suitable for the task

5. Where can you use what you learnt about Day, night and the Moon?

A. damage the classroom display B. observe the Moon over several evenings C. avoid talking about the idea D. ignore the safety guidance

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Day, night and the Moon?

A. One example proves that all cases are identical. B. Rotation creates day and night and the Moon has changing visible phases. C. An observation is exactly the same as a guess. D. Safety instructions can be ignored during an activity.

2. A classmate makes a mistake in Day, night and the Moon. Which reminder helps?

A. Safety instructions can be ignored during an activity. B. Moon phases are not caused by Earth shadow every night. C. An observation is exactly the same as a guess. D. One example proves that all cases are identical.

3. The class plans to explore Day, night and the Moon. Which action fits?

A. mix unrelated ideas without planning B. skip the task and claim it is complete C. model rotation with a ball and stationary light D. guess without looking at evidence

4. Choose a pair of examples that fits Day, night and the Moon.

A. rotation and orbit B. reducing waste and stone C. bird and heart D. medicine and wire

5. Which materials are most helpful for Day, night and the Moon?

A. sharp tools without supervision B. random objects that cannot help the task C. unrelated broken electronics D. torch and model balls

6. How could a learner apply Day, night and the Moon outside school?

A. leave a mess after the lesson B. refuse to practise the lesson C. observe the Moon over several evenings D. ignore school or home safety rules

7. Which key word should appear on a Day, night and the Moon revision card?

A. ice B. full moon C. cloud D. soil

8. While studying Day, night and the Moon, which choice shows careful learning?

A. rush without listening B. change the answer without reviewing C. observe, try, explain and check your result D. copy answers without understanding

9. Which label belongs on a poster about Day, night and the Moon?

A. lungs B. shoe sole C. orbit D. energy saving

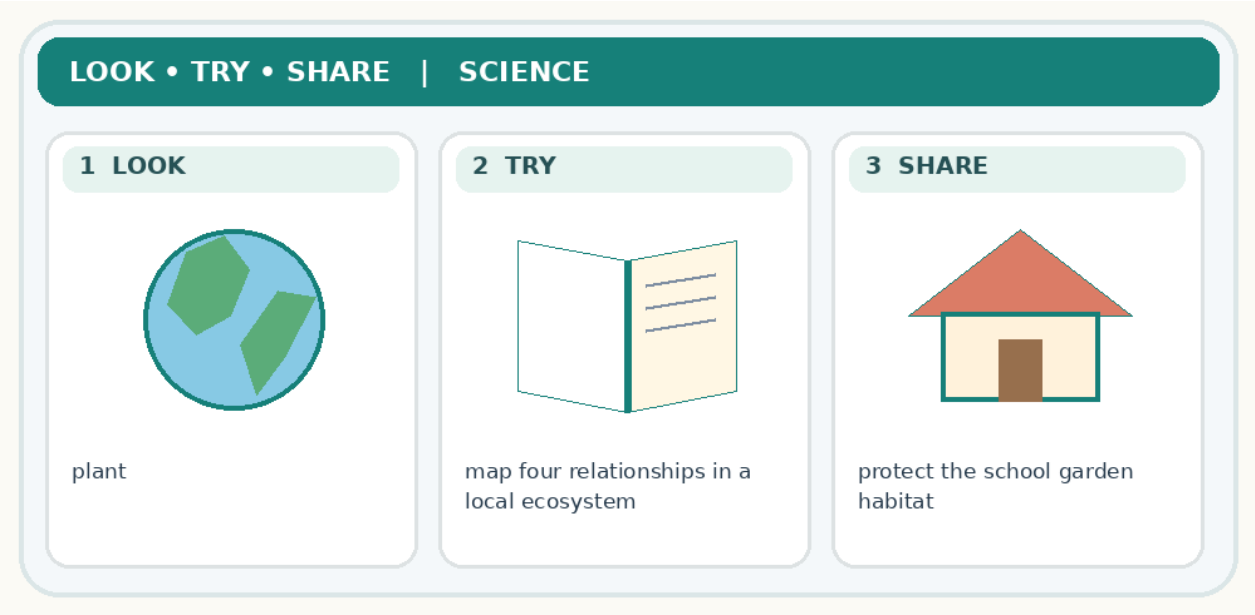

10. After practising Day, night and the Moon, what is a useful next step?

A. leave the group without sharing B. share one observation and listen to feedback C. tear up other learners work D. claim that feedback is never helpful

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 7. Balanced ecosystems

Systems | Term 2

EXPLORE

Living things, water, air and soil form connected ecosystems.

Look for: plant, insect, bird, soil

PLAY & APPLY

Activity: map four relationships in a local ecosystem

Materials: ecosystem picture and sticky notes

Real life: protect the school garden habitat

Remember: Removing one organism can affect others.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Balanced ecosystems?

A. cooked food B. air C. clean utensils D. plant

2. What is the best activity for practising Balanced ecosystems?

A. leave all materials untouched B. copy without discussing anything C. map four relationships in a local ecosystem D. ignore the instructions and rush

3. Which other example helps us explore Balanced ecosystems?

A. plant B. insect C. slope D. soap

4. Which materials should the group prepare to study Balanced ecosystems?

A. nothing suitable for the task B. ecosystem picture and sticky notes C. unsafe tools without an adult D. broken objects found at random

5. Where can you use what you learnt about Balanced ecosystems?

A. avoid talking about the idea B. damage the classroom display C. ignore the safety guidance D. protect the school garden habitat

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Balanced ecosystems?

A. An observation is exactly the same as a guess. B. One example proves that all cases are identical. C. Safety instructions can be ignored during an activity. D. Living things, water, air and soil form connected ecosystems.

2. A classmate makes a mistake in Balanced ecosystems. Which reminder helps?

A. Safety instructions can be ignored during an activity. B. An observation is exactly the same as a guess. C. Removing one organism can affect others. D. One example proves that all cases are identical.

3. The class plans to explore Balanced ecosystems. Which action fits?

A. skip the task and claim it is complete B. mix unrelated ideas without planning C. map four relationships in a local ecosystem D. guess without looking at evidence

4. Choose a pair of examples that fits Balanced ecosystems.

A. air and clean utensils B. cooked food and sunlight C. plant and soil D. switch and condensation

5. Which materials are most helpful for Balanced ecosystems?

A. ecosystem picture and sticky notes B. random objects that cannot help the task C. sharp tools without supervision D. unrelated broken electronics

6. How could a learner apply Balanced ecosystems outside school?

A. protect the school garden habitat B. ignore school or home safety rules C. refuse to practise the lesson D. leave a mess after the lesson

7. Which key word should appear on a Balanced ecosystems revision card?

A. medicine B. health worker C. bird D. wire

8. While studying Balanced ecosystems, which choice shows careful learning?

A. copy answers without understanding B. rush without listening C. change the answer without reviewing D. observe, try, explain and check your result

9. Which label belongs on a poster about Balanced ecosystems?

A. reducing waste B. cell C. full moon D. soil

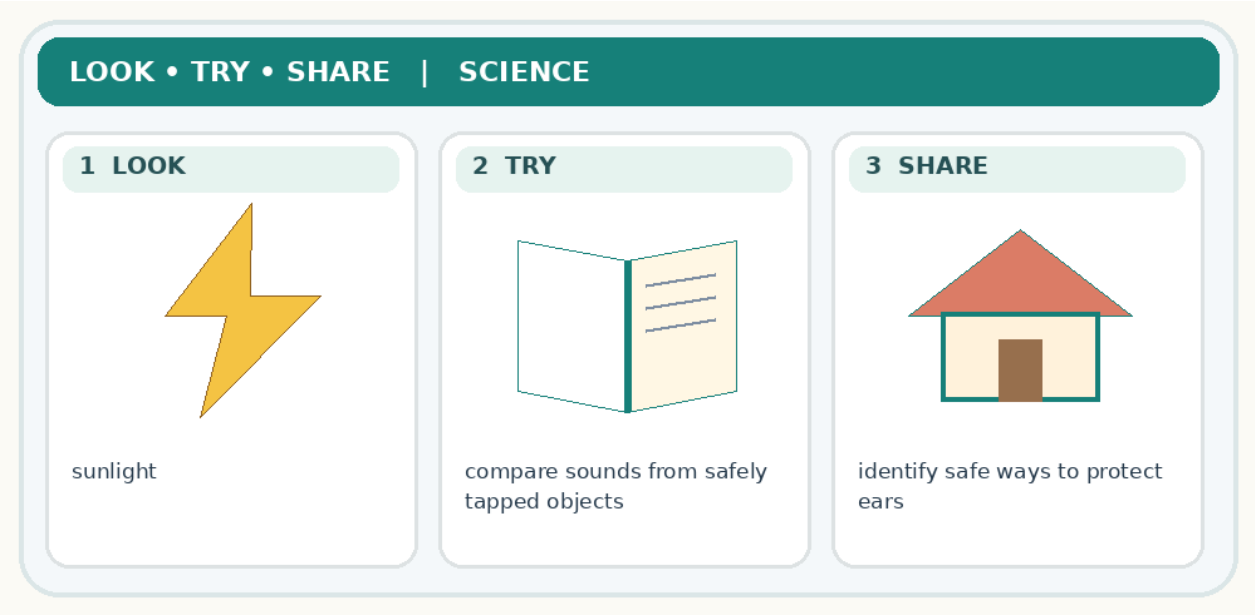

10. After practising Balanced ecosystems, what is a useful next step?

A. tear up other learners work B. claim that feedback is never helpful C. leave the group without sharing D. share one observation and listen to feedback

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 8. Heat, light and sound

Forces and Energy | Term 2

EXPLORE

Heat, light and sound transfer energy in different ways.

Look for: sunlight, drum sound, warm air, shadow

PLAY & APPLY

Activity: compare sounds from safely tapped objects

Materials: paper, torch operated by adult, drum

Real life: identify safe ways to protect ears

Remember: Sound needs a material medium to travel.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Heat, light and sound?

A. water B. irrigation C. clean water D. sunlight

2. What is the best activity for practising Heat, light and sound?

A. copy without discussing anything B. ignore the instructions and rush C. compare sounds from safely tapped objects D. leave all materials untouched

3. Which other example helps us explore Heat, light and sound?

A. seed B. drum sound C. falling ball D. rotation

4. Which materials should the group prepare to study Heat, light and sound?

A. unsafe tools without an adult B. paper, torch operated by adult, drum C. broken objects found at random D. nothing suitable for the task

5. Where can you use what you learnt about Heat, light and sound?

A. avoid talking about the idea B. damage the classroom display C. ignore the safety guidance D. identify safe ways to protect ears

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Heat, light and sound?

A. One example proves that all cases are identical. B. Safety instructions can be ignored during an activity. C. An observation is exactly the same as a guess. D. Heat, light and sound transfer energy in different ways.

2. A classmate makes a mistake in Heat, light and sound. Which reminder helps?

A. Sound needs a material medium to travel. B. One example proves that all cases are identical. C. Safety instructions can be ignored during an activity. D. An observation is exactly the same as a guess.

3. The class plans to explore Heat, light and sound. Which action fits?

A. guess without looking at evidence B. compare sounds from safely tapped objects C. mix unrelated ideas without planning D. skip the task and claim it is complete

4. Choose a pair of examples that fits Heat, light and sound.

A. clean water and irrigation B. cooked food and air C. water and soil D. sunlight and shadow

5. Which materials are most helpful for Heat, light and sound?

A. paper, torch operated by adult, drum B. random objects that cannot help the task C. sharp tools without supervision D. unrelated broken electronics

6. How could a learner apply Heat, light and sound outside school?

A. ignore school or home safety rules B. identify safe ways to protect ears C. leave a mess after the lesson D. refuse to practise the lesson

7. Which key word should appear on a Heat, light and sound revision card?

A. flower B. cloud C. blood D. warm air

8. While studying Heat, light and sound, which choice shows careful learning?

A. observe, try, explain and check your result B. change the answer without reviewing C. copy answers without understanding D. rush without listening

9. Which label belongs on a poster about Heat, light and sound?

A. rough road B. wire C. shadow D. rain

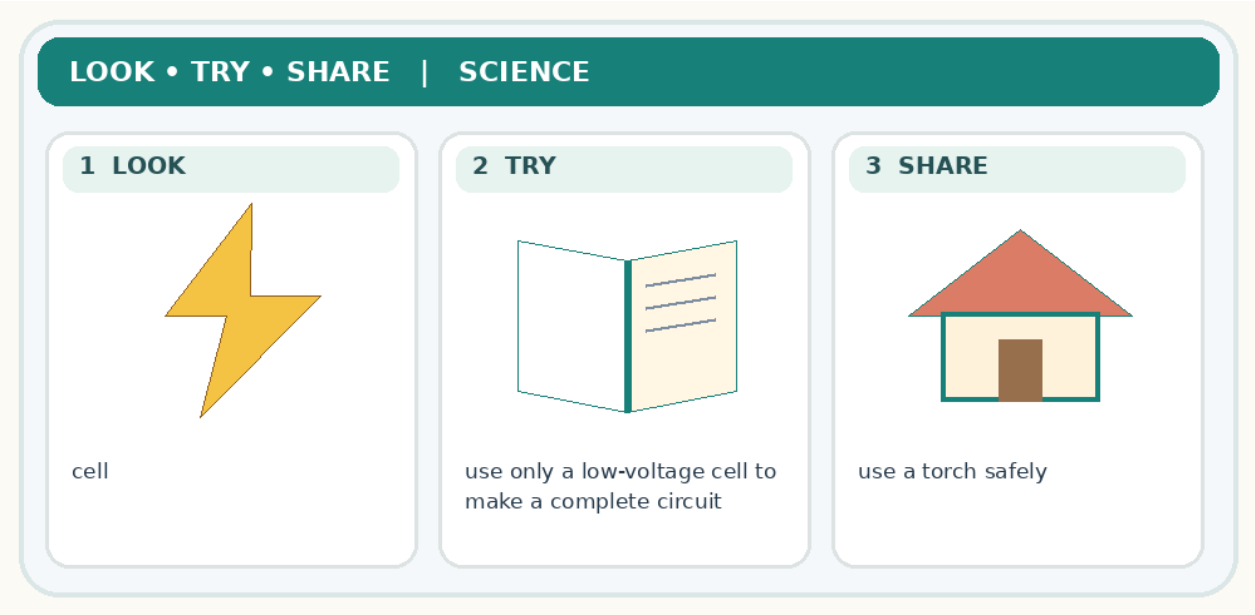

10. After practising Heat, light and sound, what is a useful next step?

A. claim that feedback is never helpful B. leave the group without sharing C. tear up other learners work D. share one observation and listen to feedback

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 9. Simple electric circuits

Forces and Energy | Term 2

EXPLORE

A simple circuit needs a complete path for current to flow.

Look for: cell, wire, bulb, switch

PLAY & APPLY

Activity: use only a low-voltage cell to make a complete circuit

Materials: low-voltage cell, wire, lamp; adult supervision

Real life: use a torch safely

Remember: A broken circuit will not light a bulb.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Simple electric circuits?

A. insect B. ventilation C. cell D. plant

2. What is the best activity for practising Simple electric circuits?

A. ignore the instructions and rush B. leave all materials untouched C. use only a low-voltage cell to make a complete circuit D. copy without discussing anything

3. Which other example helps us explore Simple electric circuits?

A. clean water B. wire C. falling ball D. long roots

4. Which materials should the group prepare to study Simple electric circuits?

A. unsafe tools without an adult B. broken objects found at random C. nothing suitable for the task D. low-voltage cell, wire, lamp; adult supervision

5. Where can you use what you learnt about Simple electric circuits?

A. avoid talking about the idea B. damage the classroom display C. use a torch safely D. ignore the safety guidance

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Simple electric circuits?

A. One example proves that all cases are identical. B. Safety instructions can be ignored during an activity. C. A simple circuit needs a complete path for current to flow. D. An observation is exactly the same as a guess.

2. A classmate makes a mistake in Simple electric circuits. Which reminder helps?

A. Safety instructions can be ignored during an activity. B. A broken circuit will not light a bulb. C. One example proves that all cases are identical. D. An observation is exactly the same as a guess.

3. The class plans to explore Simple electric circuits. Which action fits?

A. skip the task and claim it is complete B. use only a low-voltage cell to make a complete circuit C. guess without looking at evidence D. mix unrelated ideas without planning

4. Choose a pair of examples that fits Simple electric circuits.

A. shade and evaporation B. insect and sunlight C. ventilation and plant D. cell and switch

5. Which materials are most helpful for Simple electric circuits?

A. sharp tools without supervision B. unrelated broken electronics C. random objects that cannot help the task D. low-voltage cell, wire, lamp; adult supervision

6. How could a learner apply Simple electric circuits outside school?

A. leave a mess after the lesson B. refuse to practise the lesson C. ignore school or home safety rules D. use a torch safely

7. Which key word should appear on a Simple electric circuits revision card?

A. clean utensils B. bulb C. condensation D. thorns

8. While studying Simple electric circuits, which choice shows careful learning?

A. rush without listening B. change the answer without reviewing C. copy answers without understanding D. observe, try, explain and check your result

9. Which label belongs on a poster about Simple electric circuits?

A. switch B. orbit C. fur D. breathing

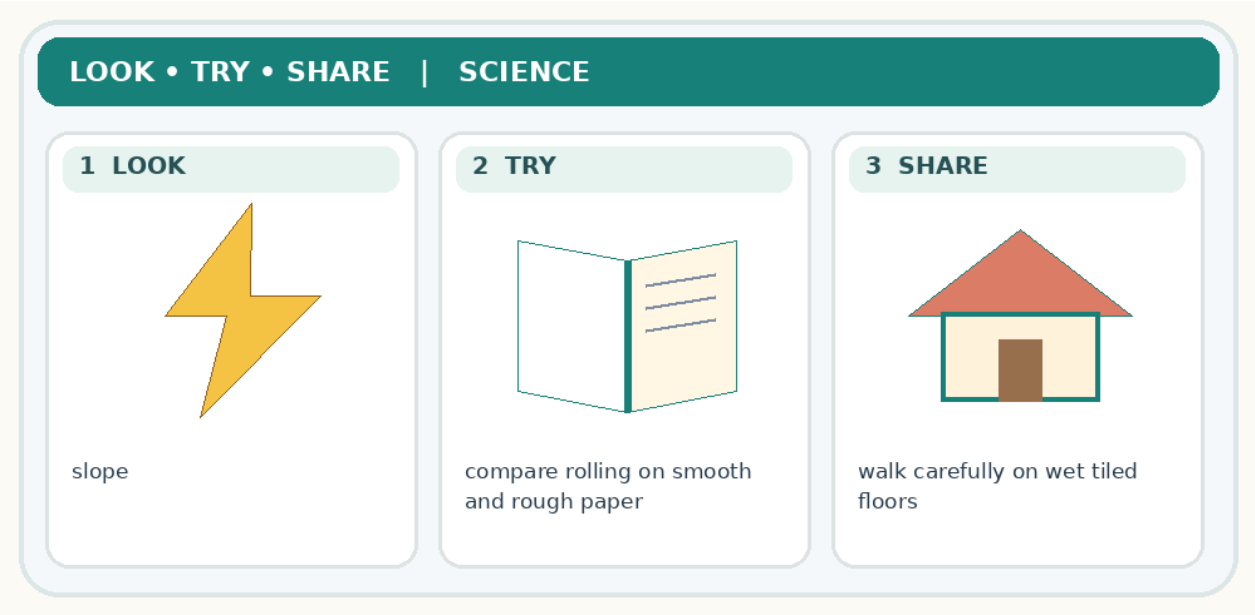

10. After practising Simple electric circuits, what is a useful next step?

A. leave the group without sharing B. share one observation and listen to feedback C. tear up other learners work D. claim that feedback is never helpful

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 10. Gravity and friction

Forces and Energy | Term 2

EXPLORE

Gravity pulls objects down and friction opposes sliding.

Look for: slope, shoe sole, rough road, falling ball

PLAY & APPLY

Activity: compare rolling on smooth and rough paper

Materials: toy car and different surfaces

Real life: walk carefully on wet tiled floors

Remember: Friction is not the same as gravity.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Gravity and friction?

A. solar dryer B. shade C. slope D. seed

2. What is the best activity for practising Gravity and friction?

A. copy without discussing anything B. ignore the instructions and rush C. compare rolling on smooth and rough paper D. leave all materials untouched

3. Which other example helps us explore Gravity and friction?

A. food processing B. shoe sole C. fur D. bulb

4. Which materials should the group prepare to study Gravity and friction?

A. toy car and different surfaces B. unsafe tools without an adult C. broken objects found at random D. nothing suitable for the task

5. Where can you use what you learnt about Gravity and friction?

A. avoid talking about the idea B. damage the classroom display C. walk carefully on wet tiled floors D. ignore the safety guidance

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Gravity and friction?

A. An observation is exactly the same as a guess. B. Gravity pulls objects down and friction opposes sliding. C. Safety instructions can be ignored during an activity. D. One example proves that all cases are identical.

2. A classmate makes a mistake in Gravity and friction. Which reminder helps?

A. One example proves that all cases are identical. B. Friction is not the same as gravity. C. An observation is exactly the same as a guess. D. Safety instructions can be ignored during an activity.

3. The class plans to explore Gravity and friction. Which action fits?

A. compare rolling on smooth and rough paper B. guess without looking at evidence C. mix unrelated ideas without planning D. skip the task and claim it is complete

4. Choose a pair of examples that fits Gravity and friction.

A. slope and falling ball B. shade and solar dryer C. ice and air D. seed and evaporation

5. Which materials are most helpful for Gravity and friction?

A. unrelated broken electronics B. random objects that cannot help the task C. toy car and different surfaces D. sharp tools without supervision

6. How could a learner apply Gravity and friction outside school?

A. walk carefully on wet tiled floors B. refuse to practise the lesson C. ignore school or home safety rules D. leave a mess after the lesson

7. Which key word should appear on a Gravity and friction revision card?

A. soil B. irrigation C. heart D. rough road

8. While studying Gravity and friction, which choice shows careful learning?

A. copy answers without understanding B. observe, try, explain and check your result C. rush without listening D. change the answer without reviewing

9. Which label belongs on a poster about Gravity and friction?

A. falling ball B. sunlight C. orbit D. covered water

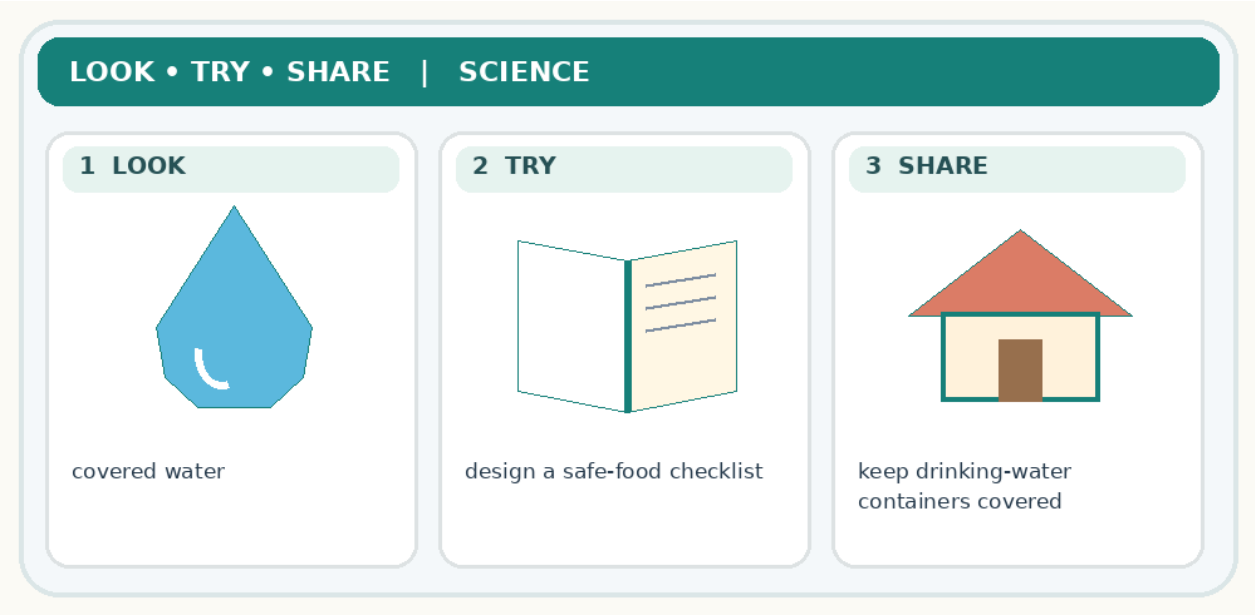

10. After practising Gravity and friction, what is a useful next step?

A. tear up other learners work B. share one observation and listen to feedback C. leave the group without sharing D. claim that feedback is never helpful

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 11. Clean water and food

Humans and the Environment | Term 3

EXPLORE

Safe drinking water and hygienic food handling protect health.

Look for: covered water, clean utensils, handwashing, cooked food

PLAY & APPLY

Activity: design a safe-food checklist

Materials: clean container and health cards

Real life: keep drinking-water containers covered

Remember: Clear-looking water is not always safe to drink.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Clean water and food?

A. thorns B. rain C. covered water D. evaporation

2. What is the best activity for practising Clean water and food?

A. design a safe-food checklist B. leave all materials untouched C. ignore the instructions and rush D. copy without discussing anything

3. Which other example helps us explore Clean water and food?

A. webbed feet B. clean utensils C. switch D. soap

4. Which materials should the group prepare to study Clean water and food?

A. broken objects found at random B. nothing suitable for the task C. clean container and health cards D. unsafe tools without an adult

5. Where can you use what you learnt about Clean water and food?

A. keep drinking-water containers covered B. avoid talking about the idea C. ignore the safety guidance D. damage the classroom display

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Clean water and food?

A. One example proves that all cases are identical. B. Safe drinking water and hygienic food handling protect health. C. Safety instructions can be ignored during an activity. D. An observation is exactly the same as a guess.

2. A classmate makes a mistake in Clean water and food. Which reminder helps?

A. One example proves that all cases are identical. B. Clear-looking water is not always safe to drink. C. An observation is exactly the same as a guess. D. Safety instructions can be ignored during an activity.

3. The class plans to explore Clean water and food. Which action fits?

A. skip the task and claim it is complete B. guess without looking at evidence C. design a safe-food checklist D. mix unrelated ideas without planning

4. Choose a pair of examples that fits Clean water and food.

A. covered water and cooked food B. flower and insect C. rain and evaporation D. thorns and food processing

5. Which materials are most helpful for Clean water and food?

A. unrelated broken electronics B. clean container and health cards C. sharp tools without supervision D. random objects that cannot help the task

6. How could a learner apply Clean water and food outside school?

A. refuse to practise the lesson B. keep drinking-water containers covered C. leave a mess after the lesson D. ignore school or home safety rules

7. Which key word should appear on a Clean water and food revision card?

A. drum sound B. wire C. air D. handwashing

8. While studying Clean water and food, which choice shows careful learning?

A. copy answers without understanding B. change the answer without reviewing C. observe, try, explain and check your result D. rush without listening

9. Which label belongs on a poster about Clean water and food?

A. reducing waste B. cooked food C. long roots D. seed

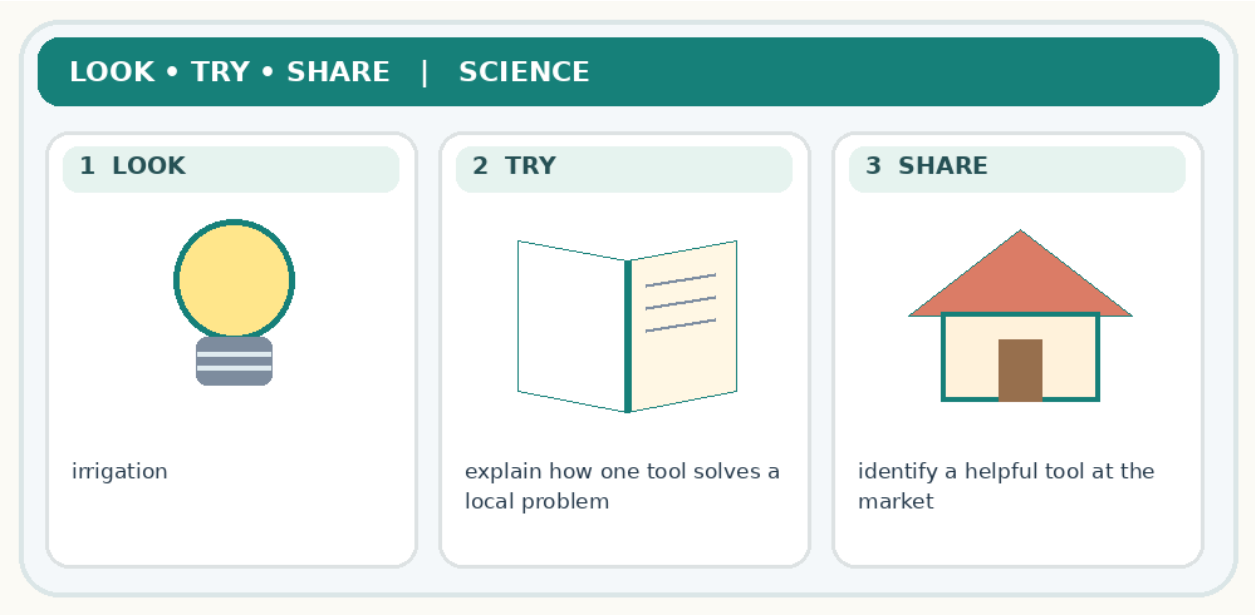

10. After practising Clean water and food, what is a useful next step?

A. tear up other learners work B. leave the group without sharing C. share one observation and listen to feedback D. claim that feedback is never helpful

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 12. Science in Ghanaian industry

Humans and the Environment | Term 3

EXPLORE

Scientific knowledge helps farming, health care and manufacturing.

Look for: irrigation, medicine, food processing, solar dryer

PLAY & APPLY

Activity: explain how one tool solves a local problem

Materials: photos of farms and workshops

Real life: identify a helpful tool at the market

Remember: Technology can be simple, not only digital.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Science in Ghanaian industry?

A. irrigation B. handwashing C. slope D. rain

2. What is the best activity for practising Science in Ghanaian industry?

A. copy without discussing anything B. leave all materials untouched C. ignore the instructions and rush D. explain how one tool solves a local problem

3. Which other example helps us explore Science in Ghanaian industry?

A. medicine B. shade C. rotation D. falling ball

4. Which materials should the group prepare to study Science in Ghanaian industry?

A. broken objects found at random B. nothing suitable for the task C. unsafe tools without an adult D. photos of farms and workshops

5. Where can you use what you learnt about Science in Ghanaian industry?

A. damage the classroom display B. identify a helpful tool at the market C. avoid talking about the idea D. ignore the safety guidance

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Science in Ghanaian industry?

A. Scientific knowledge helps farming, health care and manufacturing. B. One example proves that all cases are identical. C. Safety instructions can be ignored during an activity. D. An observation is exactly the same as a guess.

2. A classmate makes a mistake in Science in Ghanaian industry. Which reminder helps?

A. An observation is exactly the same as a guess. B. Technology can be simple, not only digital. C. Safety instructions can be ignored during an activity. D. One example proves that all cases are identical.

3. The class plans to explore Science in Ghanaian industry. Which action fits?

A. mix unrelated ideas without planning B. skip the task and claim it is complete C. explain how one tool solves a local problem D. guess without looking at evidence

4. Choose a pair of examples that fits Science in Ghanaian industry.

A. irrigation and solar dryer B. rain and handwashing C. clean water and reducing waste D. slope and stone

5. Which materials are most helpful for Science in Ghanaian industry?

A. random objects that cannot help the task B. sharp tools without supervision C. unrelated broken electronics D. photos of farms and workshops

6. How could a learner apply Science in Ghanaian industry outside school?

A. ignore school or home safety rules B. refuse to practise the lesson C. identify a helpful tool at the market D. leave a mess after the lesson

7. Which key word should appear on a Science in Ghanaian industry revision card?

A. food processing B. drum sound C. water D. cloud

8. While studying Science in Ghanaian industry, which choice shows careful learning?

A. copy answers without understanding B. change the answer without reviewing C. rush without listening D. observe, try, explain and check your result

9. Which label belongs on a poster about Science in Ghanaian industry?

A. planting B. shoe sole C. solar dryer D. insect

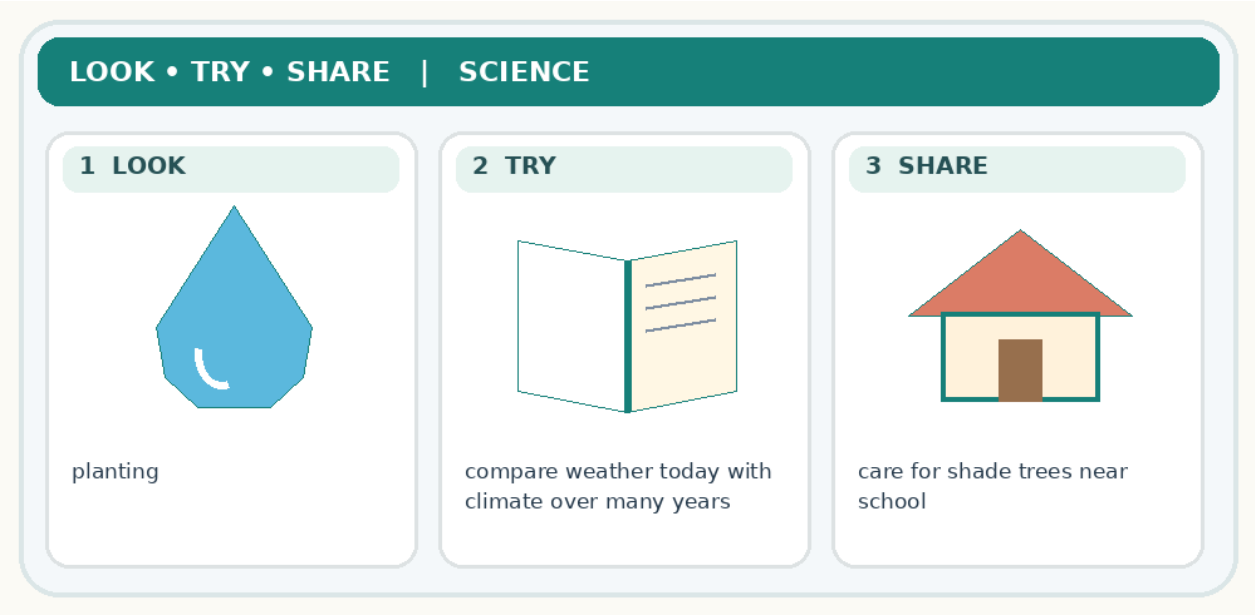

10. After practising Science in Ghanaian industry, what is a useful next step?

A. tear up other learners work B. claim that feedback is never helpful C. share one observation and listen to feedback D. leave the group without sharing

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 13. Climate patterns and action

Humans and the Environment | Term 3

EXPLORE

Long-term climate patterns can change due to many factors.

Look for: planting, reducing waste, shade, energy saving

PLAY & APPLY

Activity: compare weather today with climate over many years

Materials: local environment pictures

Real life: care for shade trees near school

Remember: Weather and climate are related but not identical.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Climate patterns and action?

A. cooked food B. heart C. food processing D. planting

2. What is the best activity for practising Climate patterns and action?

A. compare weather today with climate over many years B. copy without discussing anything C. ignore the instructions and rush D. leave all materials untouched

3. Which other example helps us explore Climate patterns and action?

A. wire B. shadow C. sunlight D. reducing waste

4. Which materials should the group prepare to study Climate patterns and action?

A. nothing suitable for the task B. unsafe tools without an adult C. local environment pictures D. broken objects found at random

5. Where can you use what you learnt about Climate patterns and action?

A. avoid talking about the idea B. ignore the safety guidance C. care for shade trees near school D. damage the classroom display

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Climate patterns and action?

A. Safety instructions can be ignored during an activity. B. Long-term climate patterns can change due to many factors. C. An observation is exactly the same as a guess. D. One example proves that all cases are identical.

2. A classmate makes a mistake in Climate patterns and action. Which reminder helps?

A. One example proves that all cases are identical. B. Weather and climate are related but not identical. C. Safety instructions can be ignored during an activity. D. An observation is exactly the same as a guess.

3. The class plans to explore Climate patterns and action. Which action fits?

A. skip the task and claim it is complete B. compare weather today with climate over many years C. mix unrelated ideas without planning D. guess without looking at evidence

4. Choose a pair of examples that fits Climate patterns and action.

A. cooked food and food processing B. planting and energy saving C. orbit and seed D. heart and covered water

5. Which materials are most helpful for Climate patterns and action?

A. sharp tools without supervision B. unrelated broken electronics C. local environment pictures D. random objects that cannot help the task

6. How could a learner apply Climate patterns and action outside school?

A. ignore school or home safety rules B. care for shade trees near school C. refuse to practise the lesson D. leave a mess after the lesson

7. Which key word should appear on a Climate patterns and action revision card?

A. drum sound B. cloud C. shade D. long roots

8. While studying Climate patterns and action, which choice shows careful learning?

A. change the answer without reviewing B. copy answers without understanding C. rush without listening D. observe, try, explain and check your result

9. Which label belongs on a poster about Climate patterns and action?

A. clean water B. plant C. water D. energy saving

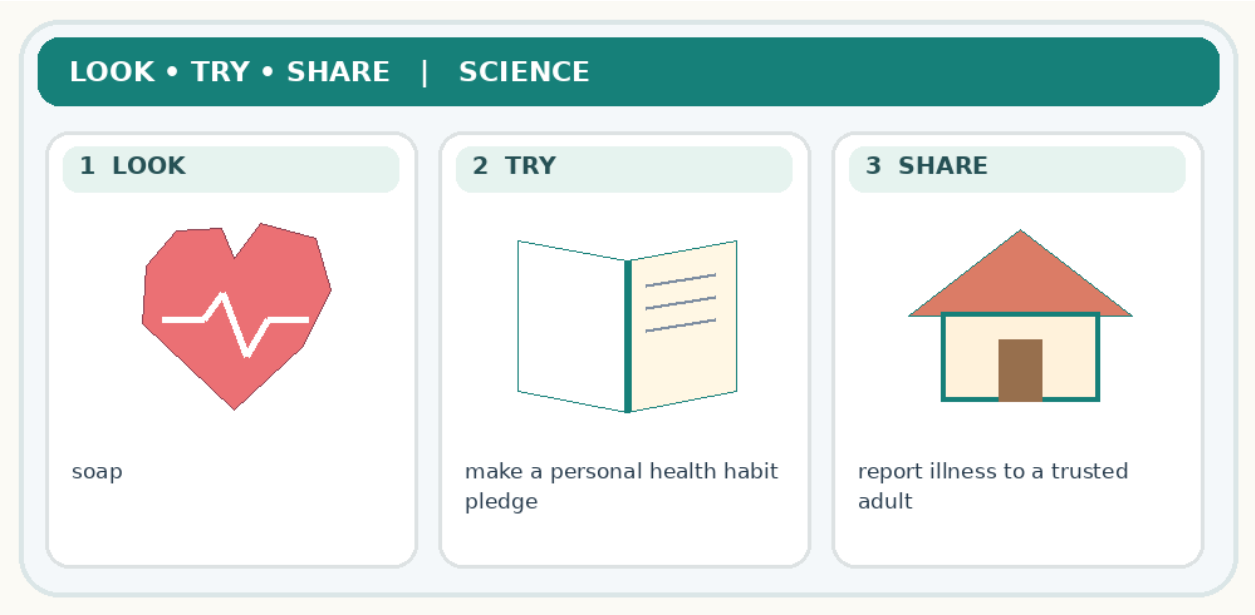

10. After practising Climate patterns and action, what is a useful next step?

A. tear up other learners work B. claim that feedback is never helpful C. share one observation and listen to feedback D. leave the group without sharing

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 14. Preventing communicable diseases

Humans and the Environment | Term 3

EXPLORE

Covering coughs, hygiene and medical advice help reduce infections.

Look for: soap, clean water, ventilation, health worker

PLAY & APPLY

Activity: make a personal health habit pledge

Materials: health action cards

Real life: report illness to a trusted adult

Remember: Do not share medicine without guidance from a health worker.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Preventing communicable diseases?

A. planting B. new moon C. soap D. orbit

2. What is the best activity for practising Preventing communicable diseases?

A. leave all materials untouched B. ignore the instructions and rush C. make a personal health habit pledge D. copy without discussing anything

3. Which other example helps us explore Preventing communicable diseases?

A. fur B. ice C. clean water D. seedling

4. Which materials should the group prepare to study Preventing communicable diseases?

A. unsafe tools without an adult B. health action cards C. broken objects found at random D. nothing suitable for the task

5. Where can you use what you learnt about Preventing communicable diseases?

A. ignore the safety guidance B. report illness to a trusted adult C. damage the classroom display D. avoid talking about the idea

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Preventing communicable diseases?

A. Safety instructions can be ignored during an activity. B. An observation is exactly the same as a guess. C. Covering coughs, hygiene and medical advice help reduce infections. D. One example proves that all cases are identical.

2. A classmate makes a mistake in Preventing communicable diseases. Which reminder helps?

A. An observation is exactly the same as a guess. B. Safety instructions can be ignored during an activity. C. Do not share medicine without guidance from a health worker. D. One example proves that all cases are identical.

3. The class plans to explore Preventing communicable diseases. Which action fits?

A. skip the task and claim it is complete B. make a personal health habit pledge C. mix unrelated ideas without planning D. guess without looking at evidence

4. Choose a pair of examples that fits Preventing communicable diseases.

A. new moon and planting B. orbit and clean utensils C. soap and health worker D. breathing and insect

5. Which materials are most helpful for Preventing communicable diseases?

A. health action cards B. random objects that cannot help the task C. sharp tools without supervision D. unrelated broken electronics

6. How could a learner apply Preventing communicable diseases outside school?

A. leave a mess after the lesson B. report illness to a trusted adult C. ignore school or home safety rules D. refuse to practise the lesson

7. Which key word should appear on a Preventing communicable diseases revision card?

A. switch B. bird C. ventilation D. plant

8. While studying Preventing communicable diseases, which choice shows careful learning?

A. observe, try, explain and check your result B. change the answer without reviewing C. rush without listening D. copy answers without understanding

9. Which label belongs on a poster about Preventing communicable diseases?

A. rotation B. blood C. health worker D. thorns

10. After practising Preventing communicable diseases, what is a useful next step?

A. claim that feedback is never helpful B. share one observation and listen to feedback C. tear up other learners work D. leave the group without sharing

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

TEACHER ANSWER KEY

Lesson 1 — How living things adapt: 1:D 2:A 3:D 4:C 5:D 6:D 7:D 8:B 9:B 10:A 11:B 12:C 13:B 14:A 15:B

Lesson 2 — Solids, liquids and gases: 1:D 2:A 3:A 4:B 5:C 6:A 7:D 8:B 9:A 10:B 11:A 12:B 13:C 14:C 15:D

Lesson 3 — The water cycle: 1:C 2:D 3:B 4:C 5:B 6:B 7:B 8:B 9:A 10:D 11:C 12:B 13:C 14:C 15:D

Lesson 4 — Plant growth stages: 1:D 2:D 3:B 4:A 5:B 6:B 7:C 8:A 9:B 10:B 11:D 12:A 13:D 14:A 15:C

Lesson 5 — Breathing and circulation: 1:C 2:C 3:D 4:D 5:A 6:A 7:D 8:C 9:B 10:D 11:A 12:C 13:D 14:C 15:B

Lesson 6 — Day, night and the Moon: 1:D 2:D 3:C 4:B 5:B 6:B 7:B 8:C 9:A 10:D 11:C 12:B 13:C 14:C 15:B

Lesson 7 — Balanced ecosystems: 1:D 2:C 3:B 4:B 5:D 6:D 7:C 8:C 9:C 10:A 11:A 12:C 13:D 14:D 15:D

Lesson 8 — Heat, light and sound: 1:D 2:C 3:B 4:B 5:D 6:D 7:A 8:B 9:D 10:A 11:B 12:D 13:A 14:C 15:D
