NUMERACY

Kindergarten 1

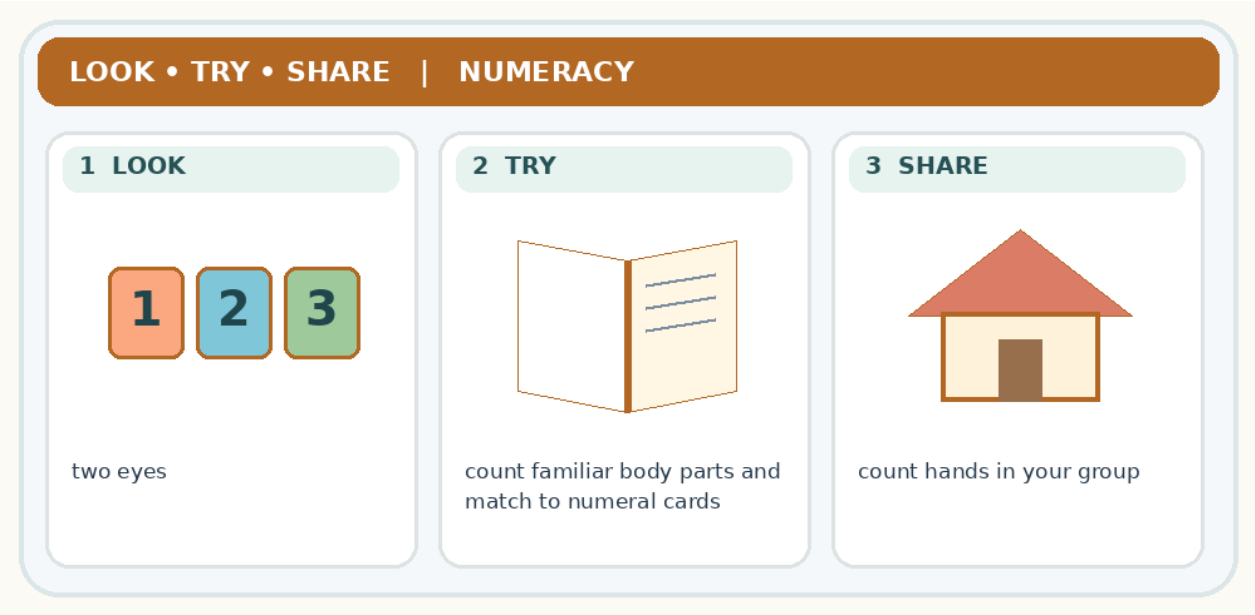

10 illustrated learning units • learner activities • 5 Play + 10 Challenge questions per lesson

Ghana-centred multimedia companion; independently authored and aligned at topic/theme level. Not an official NaCCA publication.

Open Offline_Interactive.html after extracting the package to play the matching narrated MP4s inside the lesson pages.

Lesson 1. Counting body parts

All About Me | Term 1

EXPLORE

Counting tells how many objects are in a group.

Look for: two eyes, ten fingers, one nose, two feet

PLAY & APPLY

Activity: count familiar body parts and match to numeral cards

Materials: number cards and a body outline

Real life: count hands in your group

Remember: Count each object only once.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Counting body parts?

A. price B. tall C. each D. two eyes

2. What is the best activity for practising Counting body parts?

A. ignore the instructions and rush B. count familiar body parts and match to numeral cards C. copy without discussing anything D. leave all materials untouched

3. Which other example helps us explore Counting body parts?

A. ten fingers B. red-blue C. plates D. heavy stone

4. Which materials should the group prepare to study Counting body parts?

A. number cards and a body outline B. nothing suitable for the task C. unsafe tools without an adult D. broken objects found at random

5. Where can you use what you learnt about Counting body parts?

A. avoid talking about the idea B. ignore the safety guidance C. count hands in your group D. damage the classroom display

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Counting body parts?

A. Objects can be counted more than once. B. More space always means more objects. C. Counting tells how many objects are in a group. D. All objects have exactly the same shape.

2. A classmate makes a mistake in Counting body parts. Which reminder helps?

A. All objects have exactly the same shape. B. Objects can be counted more than once. C. More space always means more objects. D. Count each object only once.

3. The class plans to explore Counting body parts. Which action fits?

A. count familiar body parts and match to numeral cards B. mix unrelated ideas without planning C. guess without looking at evidence D. skip the task and claim it is complete

4. Choose a pair of examples that fits Counting body parts.

A. circle and same B. tall and price C. each and house numbers D. two eyes and two feet

5. Which materials are most helpful for Counting body parts?

A. number cards and a body outline B. unrelated broken electronics C. sharp tools without supervision D. random objects that cannot help the task

6. How could a learner apply Counting body parts outside school?

A. leave a mess after the lesson B. ignore school or home safety rules C. refuse to practise the lesson D. count hands in your group

7. Which key word should appear on a Counting body parts revision card?

A. bus numbers B. large-small C. triangle D. one nose

8. While studying Counting body parts, which choice shows careful learning?

A. observe, try, explain and check your result B. rush without listening C. change the answer without reviewing D. copy answers without understanding

9. Which label belongs on a poster about Counting body parts?

A. short plant B. pairs C. two feet D. clap-step

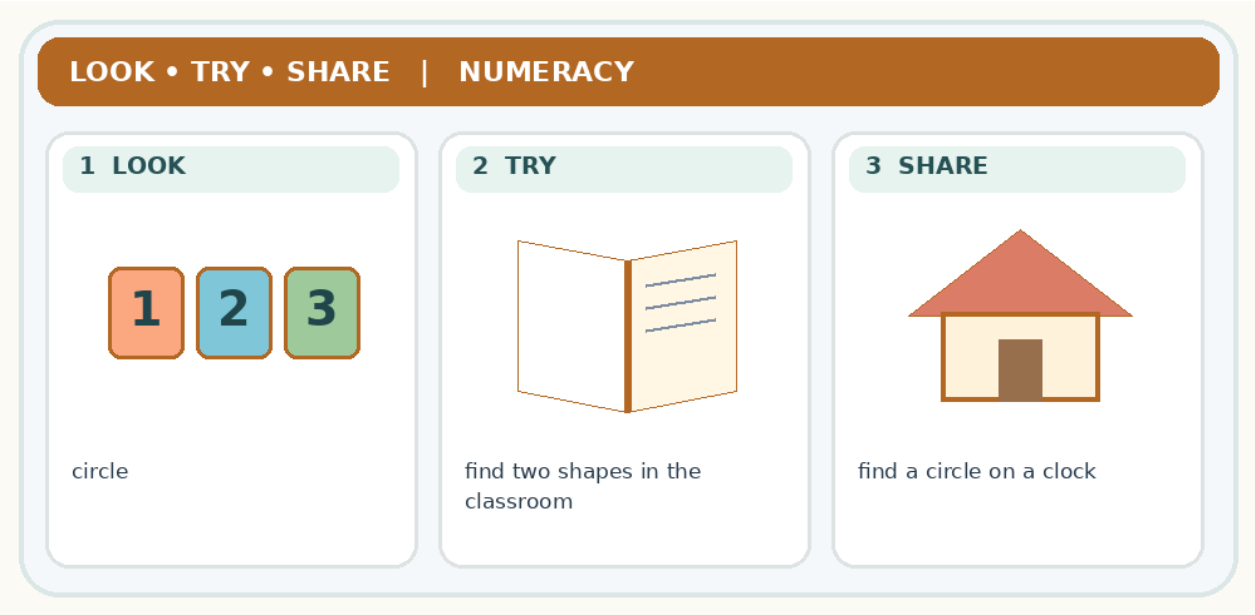

10. After practising Counting body parts, what is a useful next step?

A. leave the group without sharing B. tear up other learners work C. claim that feedback is never helpful D. share one observation and listen to feedback

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 2. Shapes around me

All About Me | Term 1

EXPLORE

Shapes can be recognised in everyday objects.

Look for: circle, square, triangle, rectangle

PLAY & APPLY

Activity: find two shapes in the classroom

Materials: shape cutouts and classroom objects

Real life: find a circle on a clock

Remember: Shapes may be turned but remain the same shape.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Shapes around me?

A. same B. short C. circle D. red-blue

2. What is the best activity for practising Shapes around me?

A. copy without discussing anything B. find two shapes in the classroom C. leave all materials untouched D. ignore the instructions and rush

3. Which other example helps us explore Shapes around me?

A. pairs B. prices C. square D. spoons

4. Which materials should the group prepare to study Shapes around me?

A. nothing suitable for the task B. unsafe tools without an adult C. shape cutouts and classroom objects D. broken objects found at random

5. Where can you use what you learnt about Shapes around me?

A. find a circle on a clock B. ignore the safety guidance C. avoid talking about the idea D. damage the classroom display

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Shapes around me?

A. All objects have exactly the same shape. B. Shapes can be recognised in everyday objects. C. Objects can be counted more than once. D. More space always means more objects.

2. A classmate makes a mistake in Shapes around me. Which reminder helps?

A. Shapes may be turned but remain the same shape. B. More space always means more objects. C. All objects have exactly the same shape. D. Objects can be counted more than once.

3. The class plans to explore Shapes around me. Which action fits?

A. skip the task and claim it is complete B. guess without looking at evidence C. mix unrelated ideas without planning D. find two shapes in the classroom

4. Choose a pair of examples that fits Shapes around me.

A. same and short B. circle and rectangle C. chairs and bus numbers D. red-blue and more

5. Which materials are most helpful for Shapes around me?

A. random objects that cannot help the task B. unrelated broken electronics C. sharp tools without supervision D. shape cutouts and classroom objects

6. How could a learner apply Shapes around me outside school?

A. find a circle on a clock B. leave a mess after the lesson C. ignore school or home safety rules D. refuse to practise the lesson

7. Which key word should appear on a Shapes around me revision card?

A. triangle B. house numbers C. cups D. coins

8. While studying Shapes around me, which choice shows careful learning?

A. rush without listening B. copy answers without understanding C. change the answer without reviewing D. observe, try, explain and check your result

9. Which label belongs on a poster about Shapes around me?

A. two eyes B. long C. rectangle D. same colour

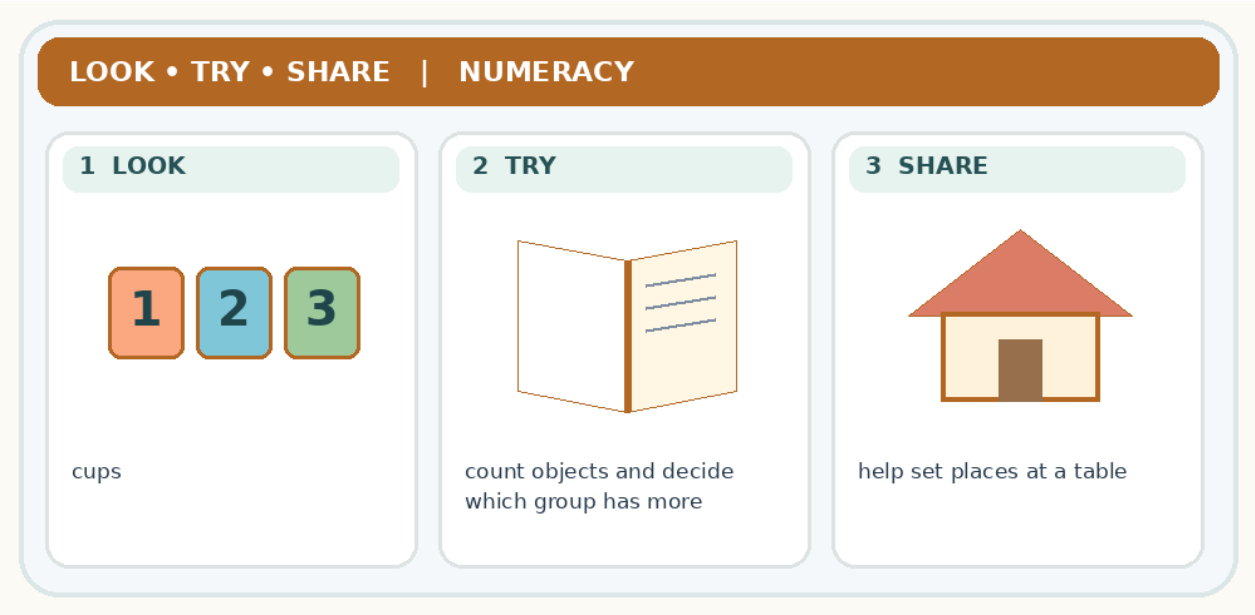

10. After practising Shapes around me, what is a useful next step?

A. leave the group without sharing B. share one observation and listen to feedback C. tear up other learners work D. claim that feedback is never helpful

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 3. Counting family objects

My Family | Term 1

EXPLORE

We use counting to compare groups of family objects.

Look for: cups, plates, spoons, chairs

PLAY & APPLY

Activity: count objects and decide which group has more

Materials: counters and object drawings

Real life: help set places at a table

Remember: A longer row is not always a larger number.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Counting family objects?

A. groups B. rectangle C. price D. cups

2. What is the best activity for practising Counting family objects?

A. ignore the instructions and rush B. leave all materials untouched C. count objects and decide which group has more D. copy without discussing anything

3. Which other example helps us explore Counting family objects?

A. plates B. heavy stone C. same use D. same size

4. Which materials should the group prepare to study Counting family objects?

A. counters and object drawings B. nothing suitable for the task C. unsafe tools without an adult D. broken objects found at random

5. Where can you use what you learnt about Counting family objects?

A. damage the classroom display B. avoid talking about the idea C. help set places at a table D. ignore the safety guidance

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Counting family objects?

A. Objects can be counted more than once. B. More space always means more objects. C. We use counting to compare groups of family objects. D. All objects have exactly the same shape.

2. A classmate makes a mistake in Counting family objects. Which reminder helps?

A. Objects can be counted more than once. B. All objects have exactly the same shape. C. More space always means more objects. D. A longer row is not always a larger number.

3. The class plans to explore Counting family objects. Which action fits?

A. skip the task and claim it is complete B. guess without looking at evidence C. count objects and decide which group has more D. mix unrelated ideas without planning

4. Choose a pair of examples that fits Counting family objects.

A. rectangle and tall B. groups and price C. prices and red-blue D. cups and chairs

5. Which materials are most helpful for Counting family objects?

A. random objects that cannot help the task B. unrelated broken electronics C. sharp tools without supervision D. counters and object drawings

6. How could a learner apply Counting family objects outside school?

A. help set places at a table B. ignore school or home safety rules C. refuse to practise the lesson D. leave a mess after the lesson

7. Which key word should appear on a Counting family objects revision card?

A. spoons B. coins C. more D. short plant

8. While studying Counting family objects, which choice shows careful learning?

A. copy answers without understanding B. rush without listening C. change the answer without reviewing D. observe, try, explain and check your result

9. Which label belongs on a poster about Counting family objects?

A. large-small B. one nose C. chairs D. ten fingers

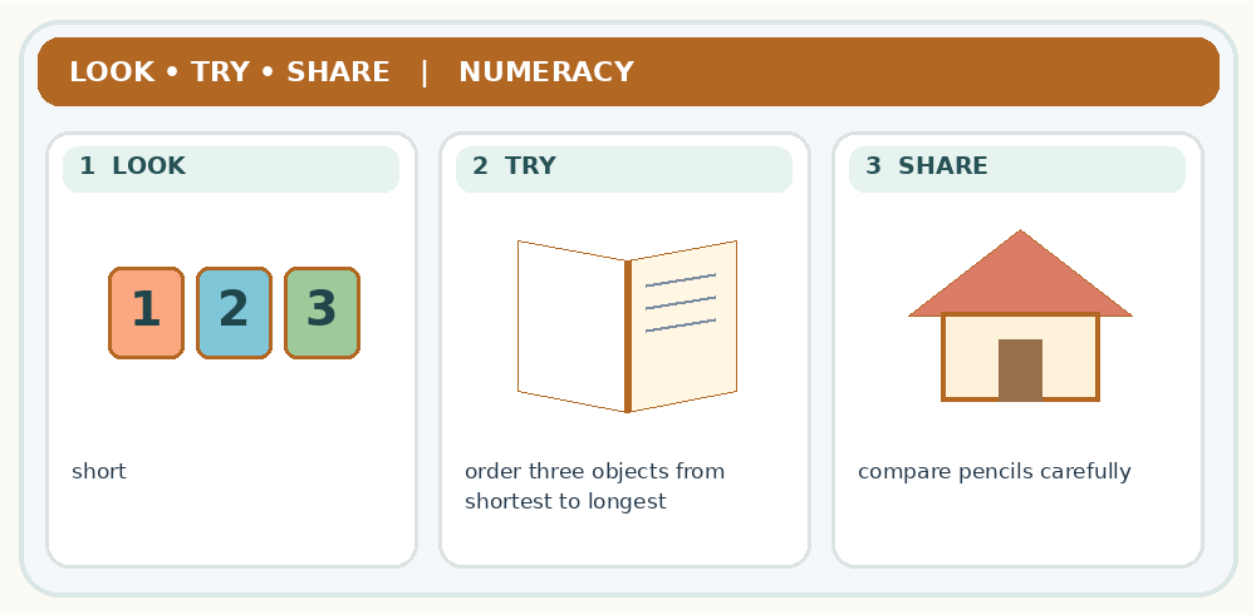

10. After practising Counting family objects, what is a useful next step?

A. leave the group without sharing B. claim that feedback is never helpful C. share one observation and listen to feedback D. tear up other learners work

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 4. Size and order

My Family | Term 1

EXPLORE

Objects can be compared by length, height and size.

Look for: short, long, tall, small

PLAY & APPLY

Activity: order three objects from shortest to longest

Materials: safe blocks and paper strips

Real life: compare pencils carefully

Remember: Big and long do not always mean the same thing.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Size and order?

A. groups B. chairs C. two eyes D. short

2. What is the best activity for practising Size and order?

A. ignore the instructions and rush B. copy without discussing anything C. order three objects from shortest to longest D. leave all materials untouched

3. Which other example helps us explore Size and order?

A. rectangle B. long C. heavy stone D. house numbers

4. Which materials should the group prepare to study Size and order?

A. broken objects found at random B. unsafe tools without an adult C. nothing suitable for the task D. safe blocks and paper strips

5. Where can you use what you learnt about Size and order?

A. ignore the safety guidance B. damage the classroom display C. avoid talking about the idea D. compare pencils carefully

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Size and order?

A. More space always means more objects. B. All objects have exactly the same shape. C. Objects can be counted more than once. D. Objects can be compared by length, height and size.

2. A classmate makes a mistake in Size and order. Which reminder helps?

A. Objects can be counted more than once. B. Big and long do not always mean the same thing. C. All objects have exactly the same shape. D. More space always means more objects.

3. The class plans to explore Size and order. Which action fits?

A. guess without looking at evidence B. skip the task and claim it is complete C. order three objects from shortest to longest D. mix unrelated ideas without planning

4. Choose a pair of examples that fits Size and order.

A. chairs and triangle B. circle and less C. groups and two eyes D. short and small

5. Which materials are most helpful for Size and order?

A. random objects that cannot help the task B. unrelated broken electronics C. sharp tools without supervision D. safe blocks and paper strips

6. How could a learner apply Size and order outside school?

A. refuse to practise the lesson B. compare pencils carefully C. leave a mess after the lesson D. ignore school or home safety rules

7. Which key word should appear on a Size and order revision card?

A. tall plant B. same shape C. same colour D. tall

8. While studying Size and order, which choice shows careful learning?

A. observe, try, explain and check your result B. change the answer without reviewing C. copy answers without understanding D. rush without listening

9. Which label belongs on a poster about Size and order?

A. large-small B. coins C. one nose D. small

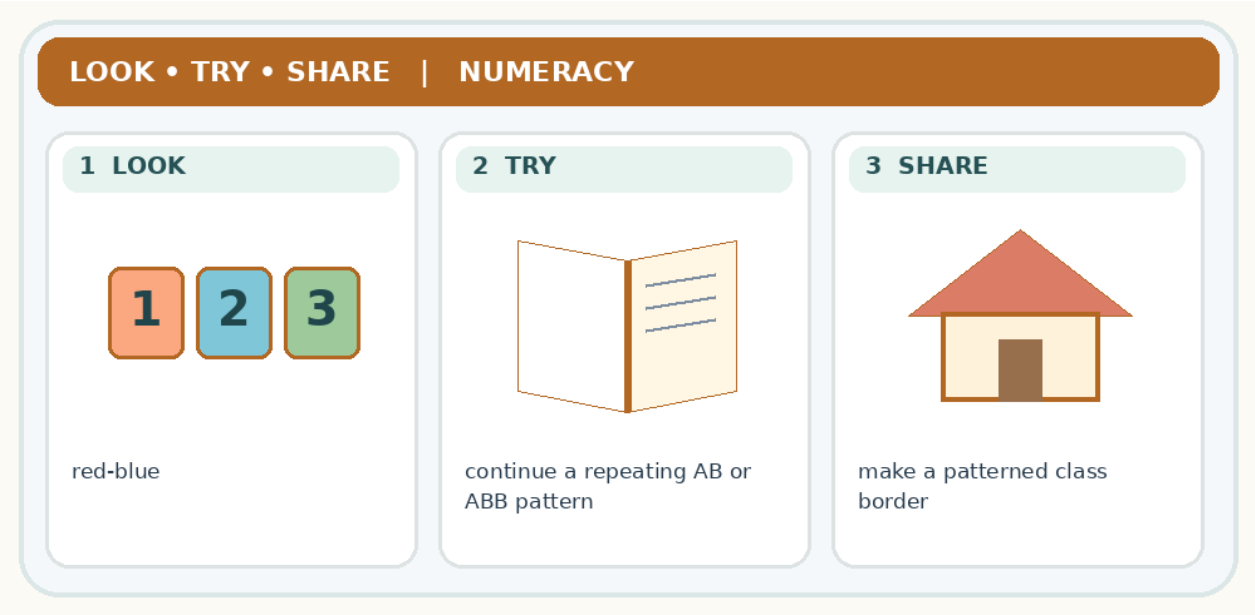

10. After practising Size and order, what is a useful next step?

A. leave the group without sharing B. tear up other learners work C. share one observation and listen to feedback D. claim that feedback is never helpful

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 5. Patterns of colours

Values and Beliefs | Term 2

EXPLORE

A pattern repeats a predictable sequence.

Look for: red-blue, clap-step, large-small, round-square

PLAY & APPLY

Activity: continue a repeating AB or ABB pattern

Materials: coloured paper shapes

Real life: make a patterned class border

Remember: A random sequence is not a repeating pattern.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Patterns of colours?

A. same use B. red-blue C. house numbers D. square

2. What is the best activity for practising Patterns of colours?

A. copy without discussing anything B. ignore the instructions and rush C. leave all materials untouched D. continue a repeating AB or ABB pattern

3. Which other example helps us explore Patterns of colours?

A. small B. clap-step C. heavy stone D. groups

4. Which materials should the group prepare to study Patterns of colours?

A. broken objects found at random B. coloured paper shapes C. nothing suitable for the task D. unsafe tools without an adult

5. Where can you use what you learnt about Patterns of colours?

A. avoid talking about the idea B. ignore the safety guidance C. make a patterned class border D. damage the classroom display

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Patterns of colours?

A. All objects have exactly the same shape. B. Objects can be counted more than once. C. A pattern repeats a predictable sequence. D. More space always means more objects.

2. A classmate makes a mistake in Patterns of colours. Which reminder helps?

A. A random sequence is not a repeating pattern. B. All objects have exactly the same shape. C. Objects can be counted more than once. D. More space always means more objects.

3. The class plans to explore Patterns of colours. Which action fits?

A. skip the task and claim it is complete B. mix unrelated ideas without planning C. continue a repeating AB or ABB pattern D. guess without looking at evidence

4. Choose a pair of examples that fits Patterns of colours.

A. red-blue and round-square B. square and same colour C. more and pairs D. house numbers and same use

5. Which materials are most helpful for Patterns of colours?

A. coloured paper shapes B. random objects that cannot help the task C. unrelated broken electronics D. sharp tools without supervision

6. How could a learner apply Patterns of colours outside school?

A. ignore school or home safety rules B. leave a mess after the lesson C. make a patterned class border D. refuse to practise the lesson

7. Which key word should appear on a Patterns of colours revision card?

A. ten fingers B. two feet C. large-small D. tall

8. While studying Patterns of colours, which choice shows careful learning?

A. observe, try, explain and check your result B. copy answers without understanding C. change the answer without reviewing D. rush without listening

9. Which label belongs on a poster about Patterns of colours?

A. each B. bus numbers C. round-square D. spoons

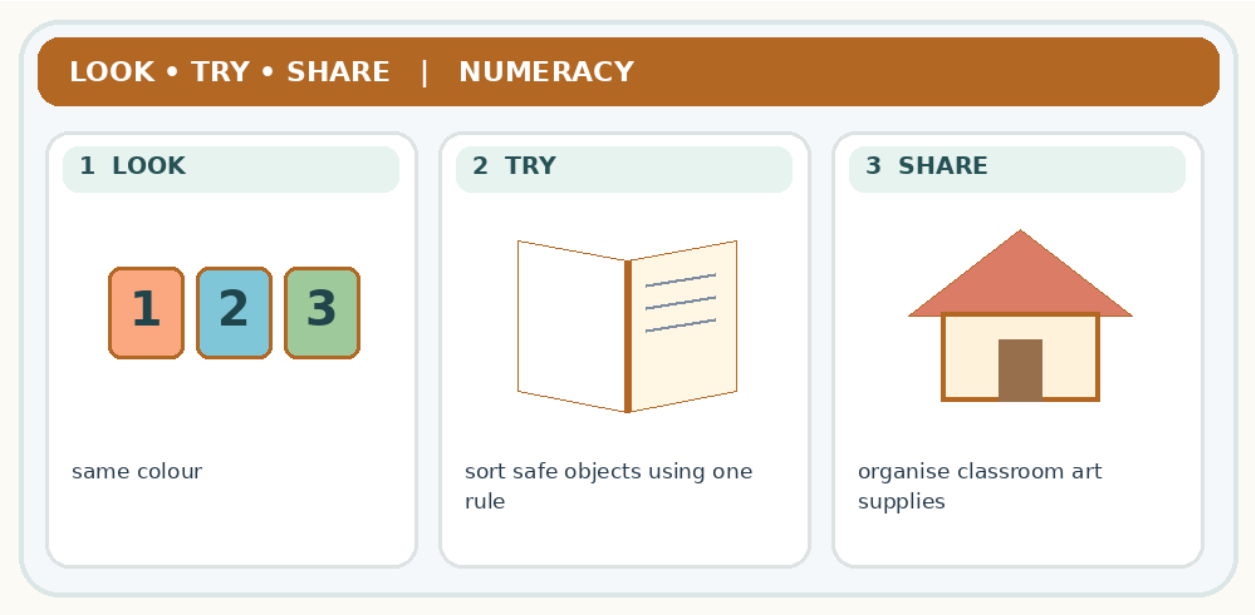

10. After practising Patterns of colours, what is a useful next step?

A. leave the group without sharing B. claim that feedback is never helpful C. share one observation and listen to feedback D. tear up other learners work

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 6. Sorting and sets

Values and Beliefs | Term 2

EXPLORE

Sorting puts objects with shared features together.

Look for: same colour, same shape, same size, same use

PLAY & APPLY

Activity: sort safe objects using one rule

Materials: buttons or paper shapes

Real life: organise classroom art supplies

Remember: Sorting rules must stay consistent.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Sorting and sets?

A. same colour B. large-small C. same D. square

2. What is the best activity for practising Sorting and sets?

A. ignore the instructions and rush B. copy without discussing anything C. leave all materials untouched D. sort safe objects using one rule

3. Which other example helps us explore Sorting and sets?

A. dates B. round-square C. cups D. same shape

4. Which materials should the group prepare to study Sorting and sets?

A. nothing suitable for the task B. broken objects found at random C. unsafe tools without an adult D. buttons or paper shapes

5. Where can you use what you learnt about Sorting and sets?

A. ignore the safety guidance B. organise classroom art supplies C. avoid talking about the idea D. damage the classroom display

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Sorting and sets?

A. Objects can be counted more than once. B. More space always means more objects. C. Sorting puts objects with shared features together. D. All objects have exactly the same shape.

2. A classmate makes a mistake in Sorting and sets. Which reminder helps?

A. More space always means more objects. B. Sorting rules must stay consistent. C. All objects have exactly the same shape. D. Objects can be counted more than once.

3. The class plans to explore Sorting and sets. Which action fits?

A. mix unrelated ideas without planning B. guess without looking at evidence C. sort safe objects using one rule D. skip the task and claim it is complete

4. Choose a pair of examples that fits Sorting and sets.

A. same colour and same use B. same and large-small C. square and heavy stone D. two feet and clap-step

5. Which materials are most helpful for Sorting and sets?

A. random objects that cannot help the task B. buttons or paper shapes C. sharp tools without supervision D. unrelated broken electronics

6. How could a learner apply Sorting and sets outside school?

A. refuse to practise the lesson B. organise classroom art supplies C. leave a mess after the lesson D. ignore school or home safety rules

7. Which key word should appear on a Sorting and sets revision card?

A. two eyes B. circle C. same size D. ten fingers

8. While studying Sorting and sets, which choice shows careful learning?

A. rush without listening B. change the answer without reviewing C. copy answers without understanding D. observe, try, explain and check your result

9. Which label belongs on a poster about Sorting and sets?

A. same use B. triangle C. less D. plates

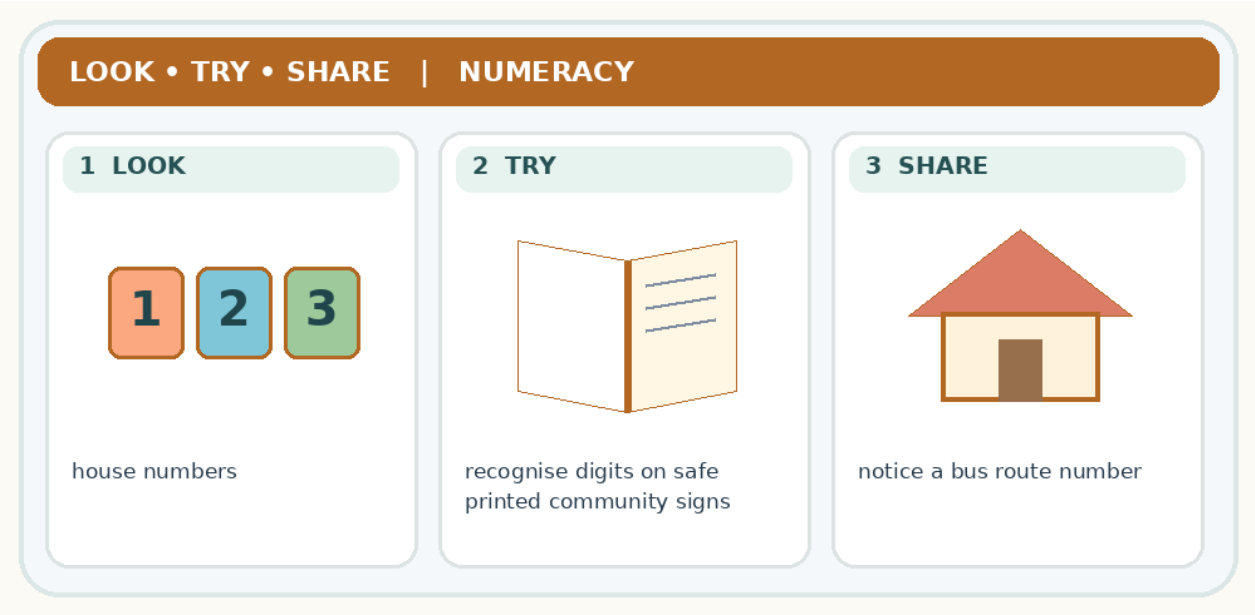

10. After practising Sorting and sets, what is a useful next step?

A. leave the group without sharing B. tear up other learners work C. claim that feedback is never helpful D. share one observation and listen to feedback

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 7. Community number signs

My Local Community | Term 2

EXPLORE

Numbers help us read positions, quantities and information.

Look for: house numbers, bus numbers, prices, dates

PLAY & APPLY

Activity: recognise digits on safe printed community signs

Materials: photo number cards

Real life: notice a bus route number

Remember: A numeral can name a number or label an object.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Community number signs?

A. price B. coins C. each D. house numbers

2. What is the best activity for practising Community number signs?

A. recognise digits on safe printed community signs B. ignore the instructions and rush C. leave all materials untouched D. copy without discussing anything

3. Which other example helps us explore Community number signs?

A. bus numbers B. more C. short D. heavy stone

4. Which materials should the group prepare to study Community number signs?

A. nothing suitable for the task B. photo number cards C. broken objects found at random D. unsafe tools without an adult

5. Where can you use what you learnt about Community number signs?

A. ignore the safety guidance B. damage the classroom display C. notice a bus route number D. avoid talking about the idea

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Community number signs?

A. Numbers help us read positions, quantities and information. B. All objects have exactly the same shape. C. Objects can be counted more than once. D. More space always means more objects.

2. A classmate makes a mistake in Community number signs. Which reminder helps?

A. Objects can be counted more than once. B. More space always means more objects. C. All objects have exactly the same shape. D. A numeral can name a number or label an object.

3. The class plans to explore Community number signs. Which action fits?

A. guess without looking at evidence B. recognise digits on safe printed community signs C. skip the task and claim it is complete D. mix unrelated ideas without planning

4. Choose a pair of examples that fits Community number signs.

A. light leaf and same shape B. coins and each C. price and cups D. house numbers and dates

5. Which materials are most helpful for Community number signs?

A. random objects that cannot help the task B. unrelated broken electronics C. sharp tools without supervision D. photo number cards

6. How could a learner apply Community number signs outside school?

A. notice a bus route number B. ignore school or home safety rules C. leave a mess after the lesson D. refuse to practise the lesson

7. Which key word should appear on a Community number signs revision card?

A. two eyes B. plates C. prices D. small

8. While studying Community number signs, which choice shows careful learning?

A. observe, try, explain and check your result B. change the answer without reviewing C. rush without listening D. copy answers without understanding

9. Which label belongs on a poster about Community number signs?

A. two feet B. long C. square D. dates

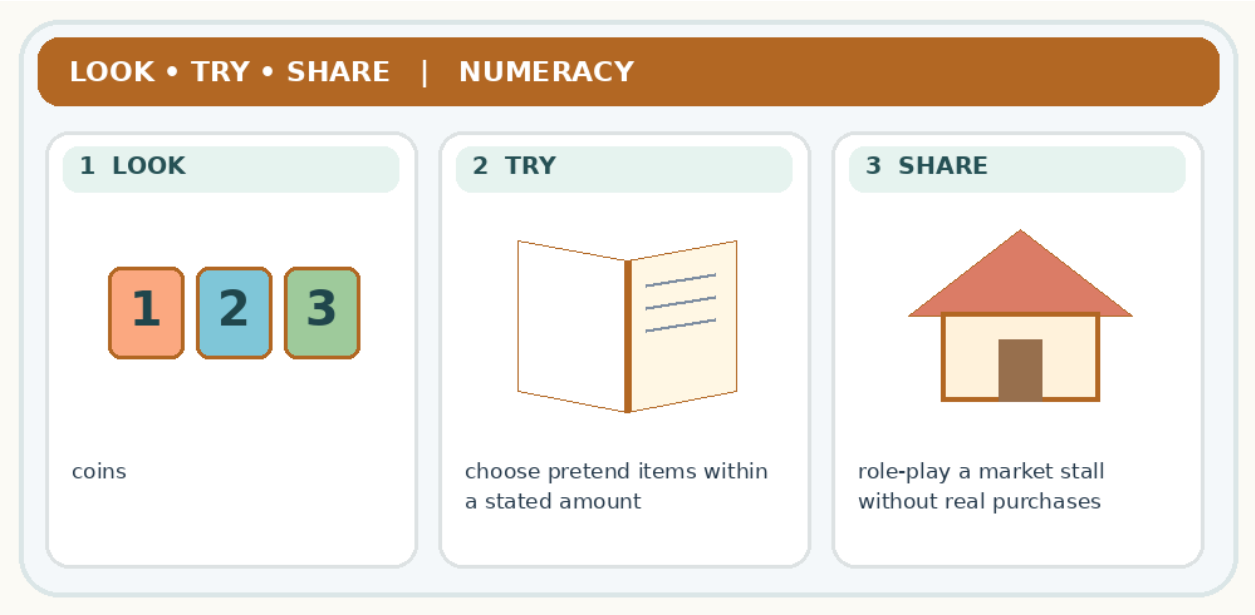

10. After practising Community number signs, what is a useful next step?

A. claim that feedback is never helpful B. share one observation and listen to feedback C. tear up other learners work D. leave the group without sharing

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 8. Money and fair choices

My Nation Ghana | Term 2

EXPLORE

We can count coins and compare simple pretend prices.

Look for: coins, price, more, less

PLAY & APPLY

Activity: choose pretend items within a stated amount

Materials: paper pretend Ghana cedi coins

Real life: role-play a market stall without real purchases

Remember: Price and number of items are not the same thing.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Money and fair choices?

A. dates B. long C. coins D. cups

2. What is the best activity for practising Money and fair choices?

A. leave all materials untouched B. ignore the instructions and rush C. choose pretend items within a stated amount D. copy without discussing anything

3. Which other example helps us explore Money and fair choices?

A. red-blue B. triangle C. price D. same use

4. Which materials should the group prepare to study Money and fair choices?

A. nothing suitable for the task B. paper pretend Ghana cedi coins C. unsafe tools without an adult D. broken objects found at random

5. Where can you use what you learnt about Money and fair choices?

A. avoid talking about the idea B. role-play a market stall without real purchases C. damage the classroom display D. ignore the safety guidance

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Money and fair choices?

A. Objects can be counted more than once. B. We can count coins and compare simple pretend prices. C. More space always means more objects. D. All objects have exactly the same shape.

2. A classmate makes a mistake in Money and fair choices. Which reminder helps?

A. All objects have exactly the same shape. B. More space always means more objects. C. Objects can be counted more than once. D. Price and number of items are not the same thing.

3. The class plans to explore Money and fair choices. Which action fits?

A. choose pretend items within a stated amount B. mix unrelated ideas without planning C. guess without looking at evidence D. skip the task and claim it is complete

4. Choose a pair of examples that fits Money and fair choices.

A. cups and long B. dates and each C. same shape and two eyes D. coins and less

5. Which materials are most helpful for Money and fair choices?

A. paper pretend Ghana cedi coins B. random objects that cannot help the task C. sharp tools without supervision D. unrelated broken electronics

6. How could a learner apply Money and fair choices outside school?

A. ignore school or home safety rules B. role-play a market stall without real purchases C. leave a mess after the lesson D. refuse to practise the lesson

7. Which key word should appear on a Money and fair choices revision card?

A. circle B. light leaf C. more D. tall

8. While studying Money and fair choices, which choice shows careful learning?

A. rush without listening B. change the answer without reviewing C. copy answers without understanding D. observe, try, explain and check your result

9. Which label belongs on a poster about Money and fair choices?

A. less B. same colour C. pairs D. large-small

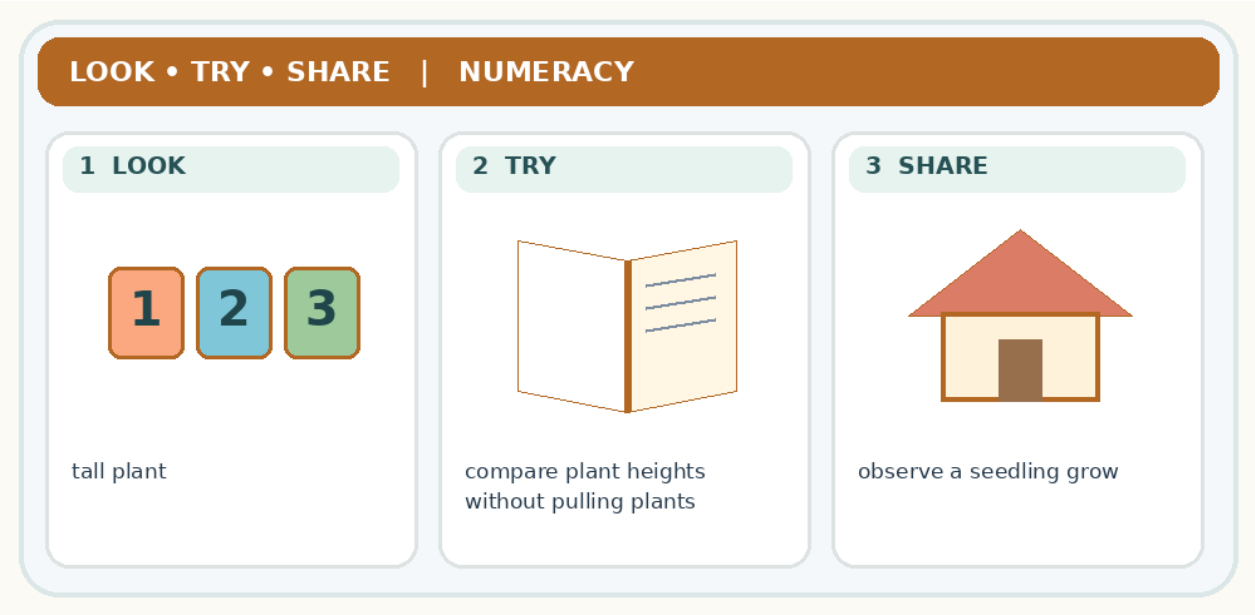

10. After practising Money and fair choices, what is a useful next step?

A. leave the group without sharing B. claim that feedback is never helpful C. share one observation and listen to feedback D. tear up other learners work

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 9. Nature measurements

All Around Us | Term 3

EXPLORE

We can compare how things change by careful measurement.

Look for: tall plant, short plant, heavy stone, light leaf

PLAY & APPLY

Activity: compare plant heights without pulling plants

Materials: string and paper ruler

Real life: observe a seedling grow

Remember: Guessing length is not the same as measuring.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Nature measurements?

A. price B. tall plant C. triangle D. spoons

2. What is the best activity for practising Nature measurements?

A. ignore the instructions and rush B. leave all materials untouched C. compare plant heights without pulling plants D. copy without discussing anything

3. Which other example helps us explore Nature measurements?

A. plates B. small C. short plant D. each

4. Which materials should the group prepare to study Nature measurements?

A. unsafe tools without an adult B. string and paper ruler C. nothing suitable for the task D. broken objects found at random

5. Where can you use what you learnt about Nature measurements?

A. ignore the safety guidance B. damage the classroom display C. observe a seedling grow D. avoid talking about the idea

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Nature measurements?

A. More space always means more objects. B. Objects can be counted more than once. C. All objects have exactly the same shape. D. We can compare how things change by careful measurement.

2. A classmate makes a mistake in Nature measurements. Which reminder helps?

A. Objects can be counted more than once. B. All objects have exactly the same shape. C. Guessing length is not the same as measuring. D. More space always means more objects.

3. The class plans to explore Nature measurements. Which action fits?

A. guess without looking at evidence B. compare plant heights without pulling plants C. mix unrelated ideas without planning D. skip the task and claim it is complete

4. Choose a pair of examples that fits Nature measurements.

A. tall plant and light leaf B. spoons and price C. triangle and clap-step D. house numbers and short

5. Which materials are most helpful for Nature measurements?

A. string and paper ruler B. random objects that cannot help the task C. unrelated broken electronics D. sharp tools without supervision

6. How could a learner apply Nature measurements outside school?

A. leave a mess after the lesson B. observe a seedling grow C. ignore school or home safety rules D. refuse to practise the lesson

7. Which key word should appear on a Nature measurements revision card?

A. heavy stone B. two eyes C. ten fingers D. cups

8. While studying Nature measurements, which choice shows careful learning?

A. change the answer without reviewing B. rush without listening C. copy answers without understanding D. observe, try, explain and check your result

9. Which label belongs on a poster about Nature measurements?

A. one nose B. same use C. two feet D. light leaf

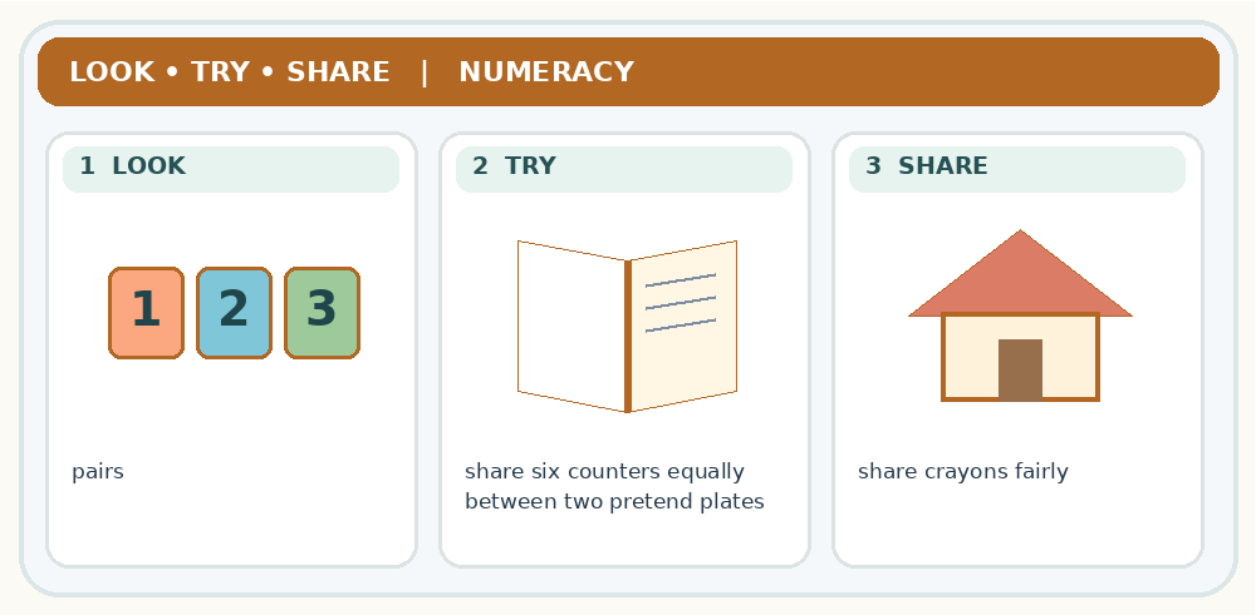

10. After practising Nature measurements, what is a useful next step?

A. leave the group without sharing B. tear up other learners work C. claim that feedback is never helpful D. share one observation and listen to feedback

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 10. Sharing fairly

My Global Community | Term 3

EXPLORE

Equal groups contain the same number of items.

Look for: pairs, groups, each, same

PLAY & APPLY

Activity: share six counters equally between two pretend plates

Materials: counters and plate drawings

Real life: share crayons fairly

Remember: Fair sharing does not always mean one object each.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Sharing fairly?

A. light leaf B. same colour C. more D. pairs

2. What is the best activity for practising Sharing fairly?

A. leave all materials untouched B. copy without discussing anything C. ignore the instructions and rush D. share six counters equally between two pretend plates

3. Which other example helps us explore Sharing fairly?

A. less B. price C. red-blue D. groups

4. Which materials should the group prepare to study Sharing fairly?

A. broken objects found at random B. counters and plate drawings C. nothing suitable for the task D. unsafe tools without an adult

5. Where can you use what you learnt about Sharing fairly?

A. damage the classroom display B. share crayons fairly C. ignore the safety guidance D. avoid talking about the idea

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Sharing fairly?

A. Equal groups contain the same number of items. B. Objects can be counted more than once. C. All objects have exactly the same shape. D. More space always means more objects.

2. A classmate makes a mistake in Sharing fairly. Which reminder helps?

A. More space always means more objects. B. All objects have exactly the same shape. C. Objects can be counted more than once. D. Fair sharing does not always mean one object each.

3. The class plans to explore Sharing fairly. Which action fits?

A. share six counters equally between two pretend plates B. skip the task and claim it is complete C. mix unrelated ideas without planning D. guess without looking at evidence

4. Choose a pair of examples that fits Sharing fairly.

A. light leaf and same colour B. plates and short plant C. pairs and same D. more and one nose

5. Which materials are most helpful for Sharing fairly?

A. unrelated broken electronics B. random objects that cannot help the task C. counters and plate drawings D. sharp tools without supervision

6. How could a learner apply Sharing fairly outside school?

A. ignore school or home safety rules B. share crayons fairly C. refuse to practise the lesson D. leave a mess after the lesson

7. Which key word should appear on a Sharing fairly revision card?

A. chairs B. large-small C. each D. long

8. While studying Sharing fairly, which choice shows careful learning?

A. change the answer without reviewing B. copy answers without understanding C. observe, try, explain and check your result D. rush without listening
