Lesson 1. Counting and comparing body parts

All About Me | Term 1

EXPLORE

Counting tells how many objects are in a group. In KG2 we explain our choices and use longer descriptions.

Look for: two eyes, ten fingers, one nose, two feet

PLAY & APPLY

Activity: In pairs, count familiar body parts and match to numeral cards; describe one reason for your choice

Materials: number cards and a body outline

Real life: count hands in your group

Remember: Count each object only once.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Counting and comparing body parts?

A. two eyes B. spoons C. small D. bus numbers

2. What is the best activity for practising Counting and comparing body parts?

A. copy without discussing anything B. leave all materials untouched C. ignore the instructions and rush D. In pairs, count familiar body parts and match to numeral cards; describe one reason for your choice

3. Which other example helps us explore Counting and comparing body parts?

A. light leaf B. groups C. ten fingers D. short

4. Which materials should the group prepare to study Counting and comparing body parts?

A. number cards and a body outline B. nothing suitable for the task C. broken objects found at random D. unsafe tools without an adult

5. Where can you use what you learnt about Counting and comparing body parts?

A. avoid talking about the idea B. ignore the safety guidance C. damage the classroom display D. count hands in your group

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Counting and comparing body parts?

A. All objects have exactly the same shape. B. Objects can be counted more than once. C. More space always means more objects. D. Counting tells how many objects are in a group. In KG2 we explain our choices and use longer descriptions.

2. A classmate makes a mistake in Counting and comparing body parts. Which reminder helps?

A. Count each object only once. B. All objects have exactly the same shape. C. More space always means more objects. D. Objects can be counted more than once.

3. The class plans to explore Counting and comparing body parts. Which action fits?

A. skip the task and claim it is complete B. mix unrelated ideas without planning C. guess without looking at evidence D. In pairs, count familiar body parts and match to numeral cards; describe one reason for your choice

4. Choose a pair of examples that fits Counting and comparing body parts.

A. large-small and each B. two eyes and two feet C. bus numbers and same colour D. spoons and small

5. Which materials are most helpful for Counting and comparing body parts?

A. random objects that cannot help the task B. unrelated broken electronics C. sharp tools without supervision D. number cards and a body outline

6. How could a learner apply Counting and comparing body parts outside school?

A. refuse to practise the lesson B. leave a mess after the lesson C. count hands in your group D. ignore school or home safety rules

7. Which key word should appear on a Counting and comparing body parts revision card?

A. same size B. same shape C. one nose D. heavy stone

8. While studying Counting and comparing body parts, which choice shows careful learning?

A. rush without listening B. observe, try, explain and check your result C. change the answer without reviewing D. copy answers without understanding

9. Which label belongs on a poster about Counting and comparing body parts?

A. same B. two feet C. plates D. round-square

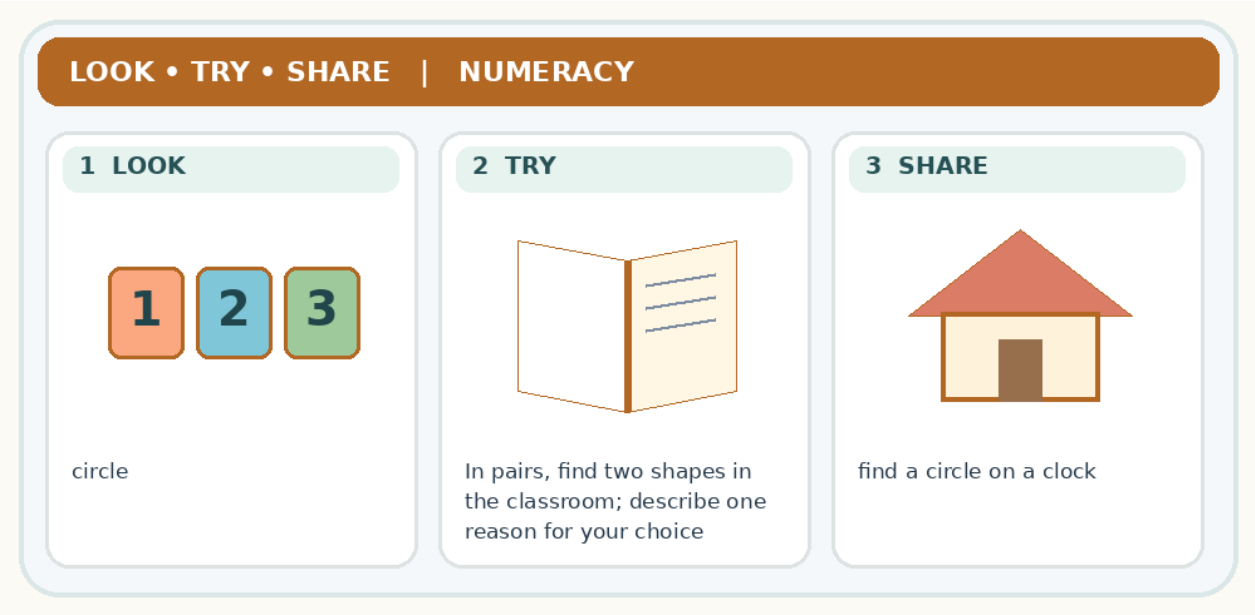

10. After practising Counting and comparing body parts, what is a useful next step?

A. tear up other learners work B. claim that feedback is never helpful C. share one observation and listen to feedback D. leave the group without sharing

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 2. Shapes around me

All About Me | Term 1

EXPLORE

Shapes can be recognised in everyday objects. In KG2 we explain our choices and use longer descriptions.

Look for: circle, square, triangle, rectangle

PLAY & APPLY

Activity: In pairs, find two shapes in the classroom; describe one reason for your choice

Materials: shape cutouts and classroom objects

Real life: find a circle on a clock

Remember: Shapes may be turned but remain the same shape.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Shapes around me?

A. circle B. prices C. two eyes D. tall

2. What is the best activity for practising Shapes around me?

A. ignore the instructions and rush B. leave all materials untouched C. In pairs, find two shapes in the classroom; describe one reason for your choice D. copy without discussing anything

3. Which other example helps us explore Shapes around me?

A. square B. ten fingers C. bus numbers D. large-small

4. Which materials should the group prepare to study Shapes around me?

A. unsafe tools without an adult B. nothing suitable for the task C. broken objects found at random D. shape cutouts and classroom objects

5. Where can you use what you learnt about Shapes around me?

A. ignore the safety guidance B. damage the classroom display C. find a circle on a clock D. avoid talking about the idea

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Shapes around me?

A. More space always means more objects. B. Shapes can be recognised in everyday objects. In KG2 we explain our choices and use longer descriptions. C. Objects can be counted more than once. D. All objects have exactly the same shape.

2. A classmate makes a mistake in Shapes around me. Which reminder helps?

A. Shapes may be turned but remain the same shape. B. All objects have exactly the same shape. C. More space always means more objects. D. Objects can be counted more than once.

3. The class plans to explore Shapes around me. Which action fits?

A. In pairs, find two shapes in the classroom; describe one reason for your choice B. mix unrelated ideas without planning C. guess without looking at evidence D. skip the task and claim it is complete

4. Choose a pair of examples that fits Shapes around me.

A. cups and less B. prices and same colour C. circle and rectangle D. tall and two eyes

5. Which materials are most helpful for Shapes around me?

A. shape cutouts and classroom objects B. random objects that cannot help the task C. sharp tools without supervision D. unrelated broken electronics

6. How could a learner apply Shapes around me outside school?

A. find a circle on a clock B. leave a mess after the lesson C. ignore school or home safety rules D. refuse to practise the lesson

7. Which key word should appear on a Shapes around me revision card?

A. short plant B. price C. triangle D. tall plant

8. While studying Shapes around me, which choice shows careful learning?

A. copy answers without understanding B. rush without listening C. observe, try, explain and check your result D. change the answer without reviewing

9. Which label belongs on a poster about Shapes around me?

A. each B. rectangle C. more D. red-blue

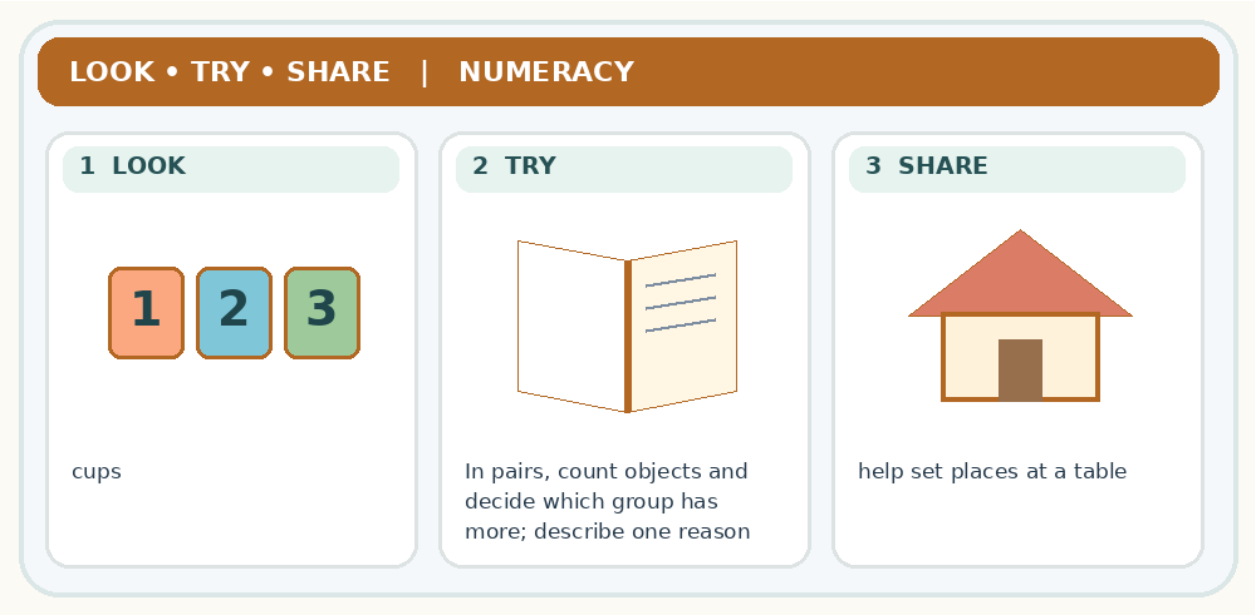

10. After practising Shapes around me, what is a useful next step?

A. claim that feedback is never helpful B. share one observation and listen to feedback C. leave the group without sharing D. tear up other learners work

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 3. Counting family objects

My Family | Term 1

EXPLORE

We use counting to compare groups of family objects. In KG2 we explain our choices and use longer descriptions.

Look for: cups, plates, spoons, chairs

PLAY & APPLY

Activity: In pairs, count objects and decide which group has more; describe one reason for your choice

Materials: counters and object drawings

Real life: help set places at a table

Remember: A longer row is not always a larger number.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Counting family objects?

A. price B. heavy stone C. less D. cups

2. What is the best activity for practising Counting family objects?

A. leave all materials untouched B. In pairs, count objects and decide which group has more; describe one reason for your choice C. ignore the instructions and rush D. copy without discussing anything

3. Which other example helps us explore Counting family objects?

A. same shape B. ten fingers C. clap-step D. plates

4. Which materials should the group prepare to study Counting family objects?

A. nothing suitable for the task B. unsafe tools without an adult C. broken objects found at random D. counters and object drawings

5. Where can you use what you learnt about Counting family objects?

A. avoid talking about the idea B. ignore the safety guidance C. damage the classroom display D. help set places at a table

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Counting family objects?

A. Objects can be counted more than once. B. We use counting to compare groups of family objects. In KG2 we explain our choices and use longer descriptions. C. More space always means more objects. D. All objects have exactly the same shape.

2. A classmate makes a mistake in Counting family objects. Which reminder helps?

A. All objects have exactly the same shape. B. Objects can be counted more than once. C. A longer row is not always a larger number. D. More space always means more objects.

3. The class plans to explore Counting family objects. Which action fits?

A. skip the task and claim it is complete B. guess without looking at evidence C. mix unrelated ideas without planning D. In pairs, count objects and decide which group has more; describe one reason for your choice

4. Choose a pair of examples that fits Counting family objects.

A. heavy stone and coins B. cups and chairs C. less and price D. more and bus numbers

5. Which materials are most helpful for Counting family objects?

A. random objects that cannot help the task B. counters and object drawings C. unrelated broken electronics D. sharp tools without supervision

6. How could a learner apply Counting family objects outside school?

A. leave a mess after the lesson B. refuse to practise the lesson C. help set places at a table D. ignore school or home safety rules

7. Which key word should appear on a Counting family objects revision card?

A. same colour B. house numbers C. spoons D. same use

8. While studying Counting family objects, which choice shows careful learning?

A. copy answers without understanding B. observe, try, explain and check your result C. change the answer without reviewing D. rush without listening

9. Which label belongs on a poster about Counting family objects?

A. triangle B. dates C. chairs D. tall

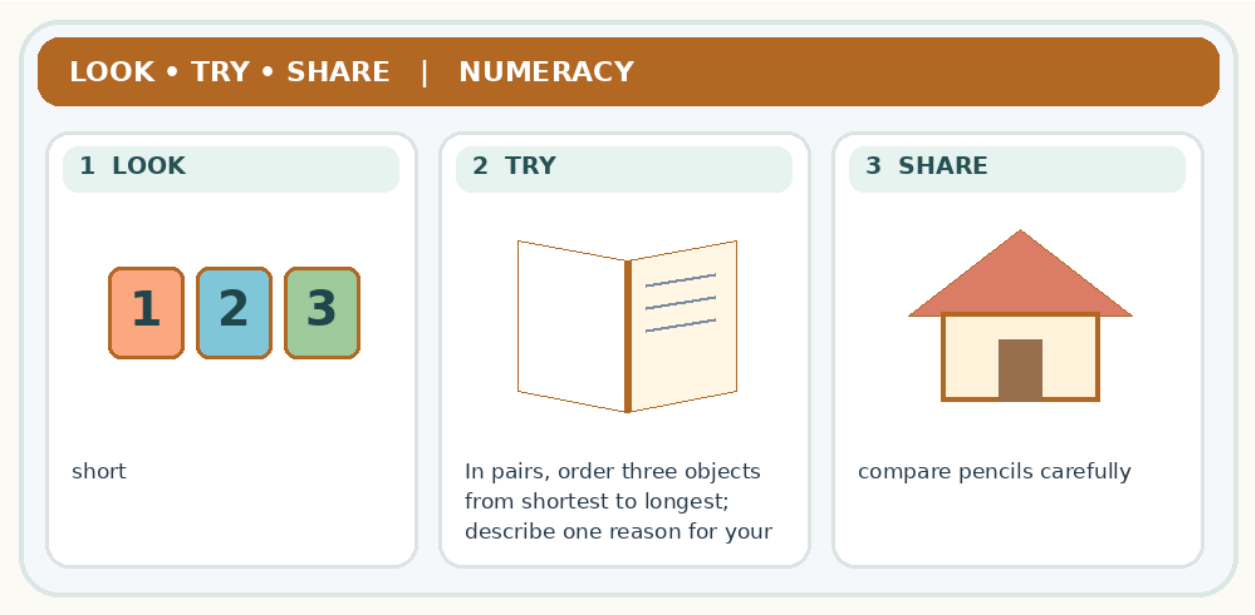

10. After practising Counting family objects, what is a useful next step?

A. tear up other learners work B. claim that feedback is never helpful C. share one observation and listen to feedback D. leave the group without sharing

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 4. Size and order

My Family | Term 1

EXPLORE

Objects can be compared by length, height and size. In KG2 we explain our choices and use longer descriptions.

Look for: short, long, tall, small

PLAY & APPLY

Activity: In pairs, order three objects from shortest to longest; describe one reason for your choice

Materials: safe blocks and paper strips

Real life: compare pencils carefully

Remember: Big and long do not always mean the same thing.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Size and order?

A. short B. chairs C. pairs D. prices

2. What is the best activity for practising Size and order?

A. ignore the instructions and rush B. copy without discussing anything C. leave all materials untouched D. In pairs, order three objects from shortest to longest; describe one reason for your choice

3. Which other example helps us explore Size and order?

A. bus numbers B. long C. short plant D. clap-step

4. Which materials should the group prepare to study Size and order?

A. nothing suitable for the task B. unsafe tools without an adult C. broken objects found at random D. safe blocks and paper strips

5. Where can you use what you learnt about Size and order?

A. compare pencils carefully B. damage the classroom display C. avoid talking about the idea D. ignore the safety guidance

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Size and order?

A. More space always means more objects. B. All objects have exactly the same shape. C. Objects can be compared by length, height and size. In KG2 we explain our choices and use longer descriptions. D. Objects can be counted more than once.

2. A classmate makes a mistake in Size and order. Which reminder helps?

A. All objects have exactly the same shape. B. Big and long do not always mean the same thing. C. Objects can be counted more than once. D. More space always means more objects.

3. The class plans to explore Size and order. Which action fits?

A. guess without looking at evidence B. In pairs, order three objects from shortest to longest; describe one reason for your choice C. skip the task and claim it is complete D. mix unrelated ideas without planning

4. Choose a pair of examples that fits Size and order.

A. short and small B. chairs and pairs C. prices and light leaf D. spoons and same colour

5. Which materials are most helpful for Size and order?

A. random objects that cannot help the task B. sharp tools without supervision C. unrelated broken electronics D. safe blocks and paper strips

6. How could a learner apply Size and order outside school?

A. ignore school or home safety rules B. compare pencils carefully C. refuse to practise the lesson D. leave a mess after the lesson

7. Which key word should appear on a Size and order revision card?

A. less B. tall C. tall plant D. one nose

8. While studying Size and order, which choice shows careful learning?

A. rush without listening B. change the answer without reviewing C. copy answers without understanding D. observe, try, explain and check your result

9. Which label belongs on a poster about Size and order?

A. heavy stone B. dates C. small D. rectangle

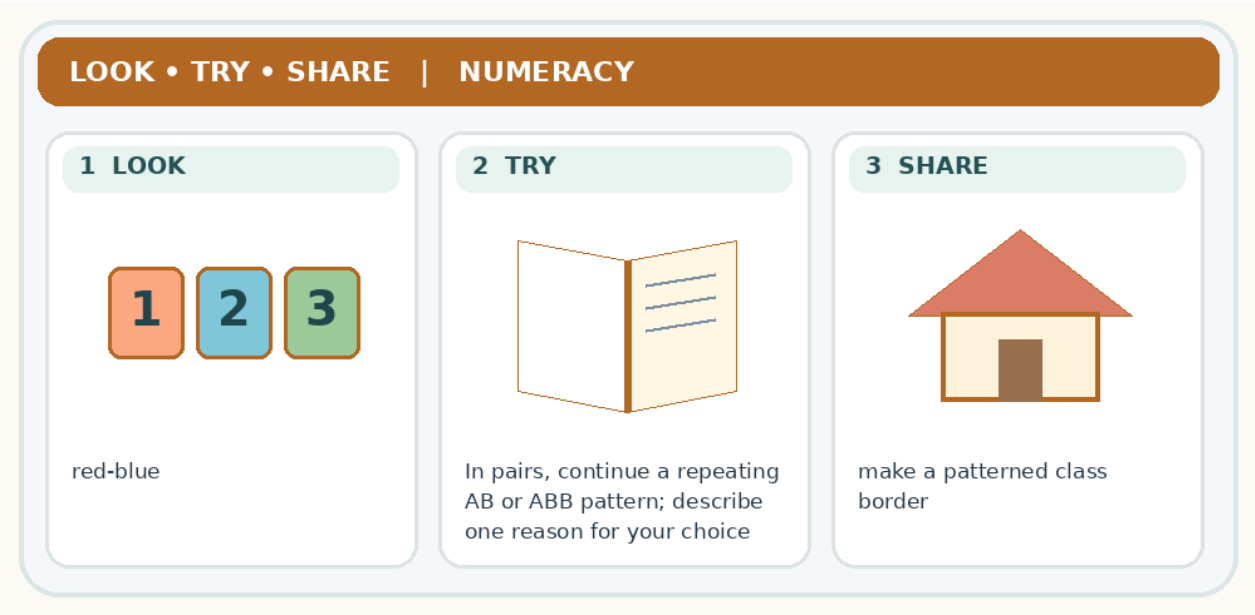

10. After practising Size and order, what is a useful next step?

A. leave the group without sharing B. tear up other learners work C. share one observation and listen to feedback D. claim that feedback is never helpful

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 5. Patterns of colours

Values and Beliefs | Term 2

EXPLORE

A pattern repeats a predictable sequence. In KG2 we explain our choices and use longer descriptions.

Look for: red-blue, clap-step, large-small, round-square

PLAY & APPLY

Activity: In pairs, continue a repeating AB or ABB pattern; describe one reason for your choice

Materials: coloured paper shapes

Real life: make a patterned class border

Remember: A random sequence is not a repeating pattern.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Patterns of colours?

A. red-blue B. plates C. tall plant D. groups

2. What is the best activity for practising Patterns of colours?

A. In pairs, continue a repeating AB or ABB pattern; describe one reason for your choice B. ignore the instructions and rush C. leave all materials untouched D. copy without discussing anything

3. Which other example helps us explore Patterns of colours?

A. less B. prices C. clap-step D. same shape

4. Which materials should the group prepare to study Patterns of colours?

A. nothing suitable for the task B. unsafe tools without an adult C. broken objects found at random D. coloured paper shapes

5. Where can you use what you learnt about Patterns of colours?

A. ignore the safety guidance B. damage the classroom display C. make a patterned class border D. avoid talking about the idea

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Patterns of colours?

A. Objects can be counted more than once. B. More space always means more objects. C. All objects have exactly the same shape. D. A pattern repeats a predictable sequence. In KG2 we explain our choices and use longer descriptions.

2. A classmate makes a mistake in Patterns of colours. Which reminder helps?

A. All objects have exactly the same shape. B. Objects can be counted more than once. C. A random sequence is not a repeating pattern. D. More space always means more objects.

3. The class plans to explore Patterns of colours. Which action fits?

A. mix unrelated ideas without planning B. skip the task and claim it is complete C. In pairs, continue a repeating AB or ABB pattern; describe one reason for your choice D. guess without looking at evidence

4. Choose a pair of examples that fits Patterns of colours.

A. red-blue and round-square B. tall plant and plates C. groups and house numbers D. short and small

5. Which materials are most helpful for Patterns of colours?

A. unrelated broken electronics B. random objects that cannot help the task C. sharp tools without supervision D. coloured paper shapes

6. How could a learner apply Patterns of colours outside school?

A. refuse to practise the lesson B. ignore school or home safety rules C. leave a mess after the lesson D. make a patterned class border

7. Which key word should appear on a Patterns of colours revision card?

A. heavy stone B. short plant C. large-small D. ten fingers

8. While studying Patterns of colours, which choice shows careful learning?

A. observe, try, explain and check your result B. rush without listening C. copy answers without understanding D. change the answer without reviewing

9. Which label belongs on a poster about Patterns of colours?

A. cups B. more C. round-square D. two eyes

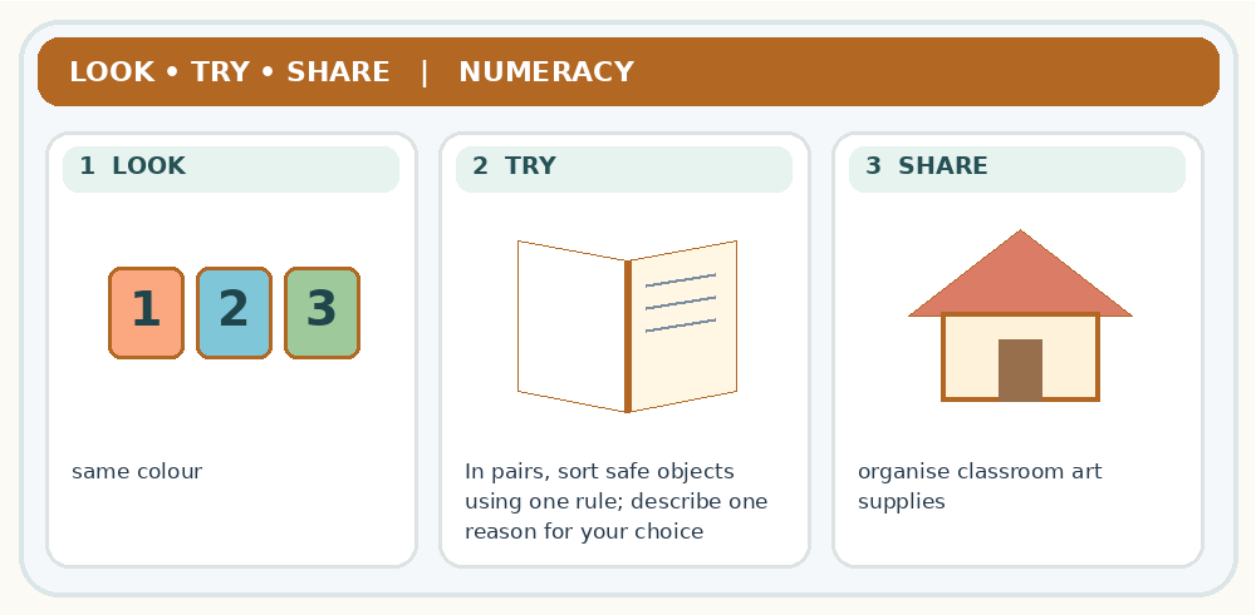

10. After practising Patterns of colours, what is a useful next step?

A. share one observation and listen to feedback B. leave the group without sharing C. claim that feedback is never helpful D. tear up other learners work

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 6. Sorting and sets

Values and Beliefs | Term 2

EXPLORE

Sorting puts objects with shared features together. In KG2 we explain our choices and use longer descriptions.

Look for: same colour, same shape, same size, same use

PLAY & APPLY

Activity: In pairs, sort safe objects using one rule; describe one reason for your choice

Materials: buttons or paper shapes

Real life: organise classroom art supplies

Remember: Sorting rules must stay consistent.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Sorting and sets?

A. same colour B. plates C. red-blue D. chairs

2. What is the best activity for practising Sorting and sets?

A. copy without discussing anything B. In pairs, sort safe objects using one rule; describe one reason for your choice C. ignore the instructions and rush D. leave all materials untouched

3. Which other example helps us explore Sorting and sets?

A. same shape B. bus numbers C. same D. each

4. Which materials should the group prepare to study Sorting and sets?

A. nothing suitable for the task B. broken objects found at random C. unsafe tools without an adult D. buttons or paper shapes

5. Where can you use what you learnt about Sorting and sets?

A. avoid talking about the idea B. damage the classroom display C. organise classroom art supplies D. ignore the safety guidance

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Sorting and sets?

A. Objects can be counted more than once. B. More space always means more objects. C. Sorting puts objects with shared features together. In KG2 we explain our choices and use longer descriptions. D. All objects have exactly the same shape.

2. A classmate makes a mistake in Sorting and sets. Which reminder helps?

A. Objects can be counted more than once. B. All objects have exactly the same shape. C. Sorting rules must stay consistent. D. More space always means more objects.

3. The class plans to explore Sorting and sets. Which action fits?

A. skip the task and claim it is complete B. mix unrelated ideas without planning C. guess without looking at evidence D. In pairs, sort safe objects using one rule; describe one reason for your choice

4. Choose a pair of examples that fits Sorting and sets.

A. chairs and plates B. red-blue and dates C. same colour and same use D. square and light leaf

5. Which materials are most helpful for Sorting and sets?

A. random objects that cannot help the task B. buttons or paper shapes C. sharp tools without supervision D. unrelated broken electronics

6. How could a learner apply Sorting and sets outside school?

A. leave a mess after the lesson B. organise classroom art supplies C. refuse to practise the lesson D. ignore school or home safety rules

7. Which key word should appear on a Sorting and sets revision card?

A. same size B. tall plant C. spoons D. tall

8. While studying Sorting and sets, which choice shows careful learning?

A. observe, try, explain and check your result B. rush without listening C. change the answer without reviewing D. copy answers without understanding

9. Which label belongs on a poster about Sorting and sets?

A. long B. ten fingers C. same use D. rectangle

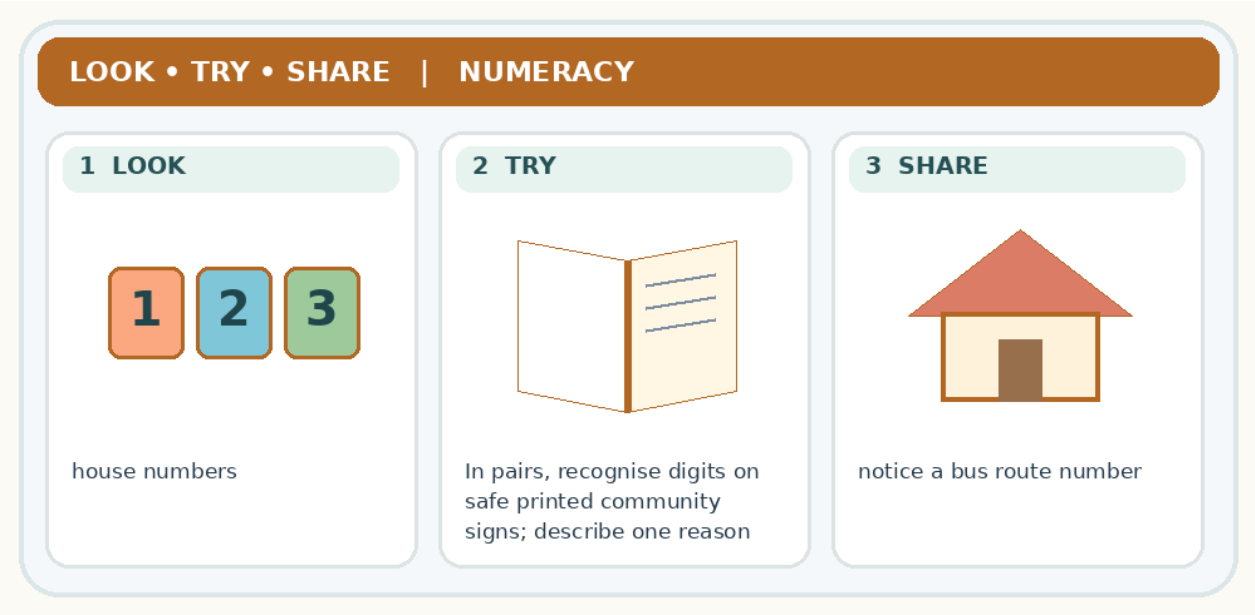

10. After practising Sorting and sets, what is a useful next step?

A. claim that feedback is never helpful B. share one observation and listen to feedback C. leave the group without sharing D. tear up other learners work

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 7. Community number signs

My Local Community | Term 2

EXPLORE

Numbers help us read positions, quantities and information. In KG2 we explain our choices and use longer descriptions.

Look for: house numbers, bus numbers, prices, dates

PLAY & APPLY

Activity: In pairs, recognise digits on safe printed community signs; describe one reason for your choice

Materials: photo number cards

Real life: notice a bus route number

Remember: A numeral can name a number or label an object.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Community number signs?

A. house numbers B. one nose C. two eyes D. rectangle

2. What is the best activity for practising Community number signs?

A. copy without discussing anything B. leave all materials untouched C. In pairs, recognise digits on safe printed community signs; describe one reason for your choice D. ignore the instructions and rush

3. Which other example helps us explore Community number signs?

A. bus numbers B. spoons C. square D. same size

4. Which materials should the group prepare to study Community number signs?

A. nothing suitable for the task B. photo number cards C. unsafe tools without an adult D. broken objects found at random

5. Where can you use what you learnt about Community number signs?

A. damage the classroom display B. avoid talking about the idea C. notice a bus route number D. ignore the safety guidance

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Community number signs?

A. All objects have exactly the same shape. B. Objects can be counted more than once. C. More space always means more objects. D. Numbers help us read positions, quantities and information. In KG2 we explain our choices and use longer descriptions.

2. A classmate makes a mistake in Community number signs. Which reminder helps?

A. Objects can be counted more than once. B. More space always means more objects. C. A numeral can name a number or label an object. D. All objects have exactly the same shape.

3. The class plans to explore Community number signs. Which action fits?

A. guess without looking at evidence B. In pairs, recognise digits on safe printed community signs; describe one reason for your choice C. mix unrelated ideas without planning D. skip the task and claim it is complete

4. Choose a pair of examples that fits Community number signs.

A. house numbers and dates B. short and same shape C. one nose and two eyes D. rectangle and tall plant

5. Which materials are most helpful for Community number signs?

A. photo number cards B. sharp tools without supervision C. unrelated broken electronics D. random objects that cannot help the task

6. How could a learner apply Community number signs outside school?

A. notice a bus route number B. leave a mess after the lesson C. refuse to practise the lesson D. ignore school or home safety rules

7. Which key word should appear on a Community number signs revision card?

A. pairs B. prices C. long D. price

8. While studying Community number signs, which choice shows careful learning?

A. copy answers without understanding B. change the answer without reviewing C. rush without listening D. observe, try, explain and check your result

9. Which label belongs on a poster about Community number signs?

A. dates B. each C. tall D. chairs

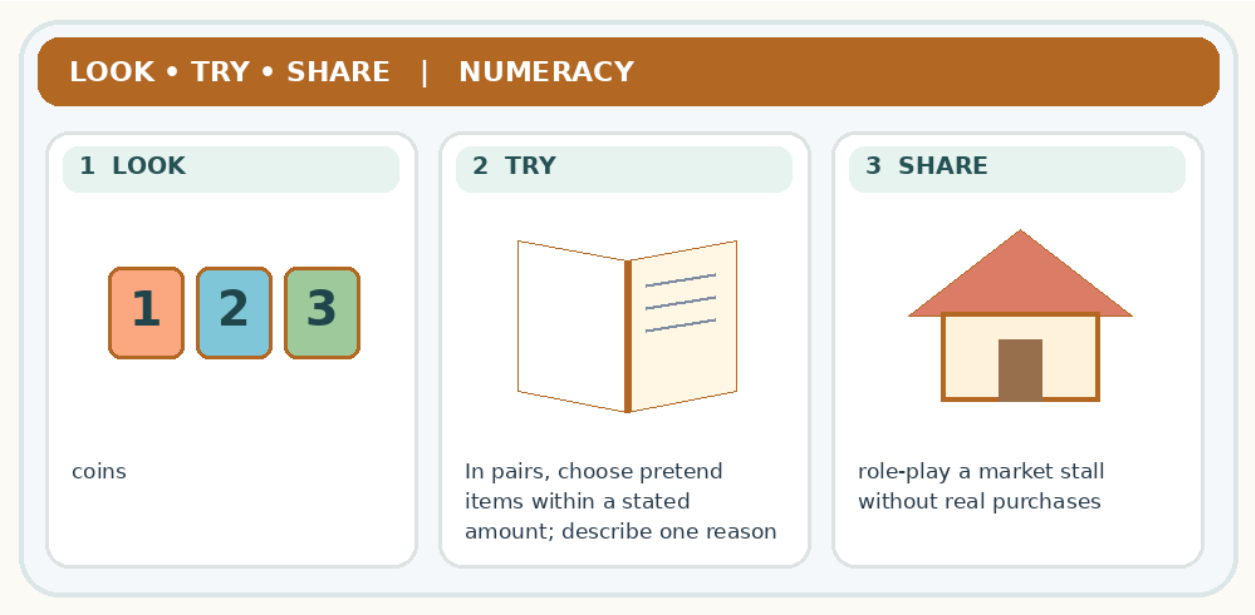

10. After practising Community number signs, what is a useful next step?

A. claim that feedback is never helpful B. leave the group without sharing C. share one observation and listen to feedback D. tear up other learners work

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 8. Money and fair choices

My Nation Ghana | Term 2

EXPLORE

We can count coins and compare simple pretend prices. In KG2 we explain our choices and use longer descriptions.

Look for: coins, price, more, less

PLAY & APPLY

Activity: In pairs, choose pretend items within a stated amount; describe one reason for your choice

Materials: paper pretend Ghana cedi coins

Real life: role-play a market stall without real purchases

Remember: Price and number of items are not the same thing.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Money and fair choices?

A. cups B. coins C. same D. long

2. What is the best activity for practising Money and fair choices?

A. copy without discussing anything B. In pairs, choose pretend items within a stated amount; describe one reason for your choice C. ignore the instructions and rush D. leave all materials untouched

3. Which other example helps us explore Money and fair choices?

A. two feet B. same size C. price D. each

4. Which materials should the group prepare to study Money and fair choices?

A. nothing suitable for the task B. paper pretend Ghana cedi coins C. unsafe tools without an adult D. broken objects found at random

5. Where can you use what you learnt about Money and fair choices?

A. ignore the safety guidance B. damage the classroom display C. avoid talking about the idea D. role-play a market stall without real purchases

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Money and fair choices?

A. All objects have exactly the same shape. B. Objects can be counted more than once. C. More space always means more objects. D. We can count coins and compare simple pretend prices. In KG2 we explain our choices and use longer descriptions.

2. A classmate makes a mistake in Money and fair choices. Which reminder helps?

A. Objects can be counted more than once. B. Price and number of items are not the same thing. C. More space always means more objects. D. All objects have exactly the same shape.

3. The class plans to explore Money and fair choices. Which action fits?

A. skip the task and claim it is complete B. mix unrelated ideas without planning C. guess without looking at evidence D. In pairs, choose pretend items within a stated amount; describe one reason for your choice

4. Choose a pair of examples that fits Money and fair choices.

A. cups and house numbers B. coins and less C. heavy stone and spoons D. same and long

5. Which materials are most helpful for Money and fair choices?

A. random objects that cannot help the task B. paper pretend Ghana cedi coins C. sharp tools without supervision D. unrelated broken electronics

6. How could a learner apply Money and fair choices outside school?

A. leave a mess after the lesson B. role-play a market stall without real purchases C. ignore school or home safety rules D. refuse to practise the lesson

7. Which key word should appear on a Money and fair choices revision card?

A. large-small B. more C. prices D. square

8. While studying Money and fair choices, which choice shows careful learning?

A. copy answers without understanding B. rush without listening C. change the answer without reviewing D. observe, try, explain and check your result

9. Which label belongs on a poster about Money and fair choices?

A. pairs B. less C. bus numbers D. small

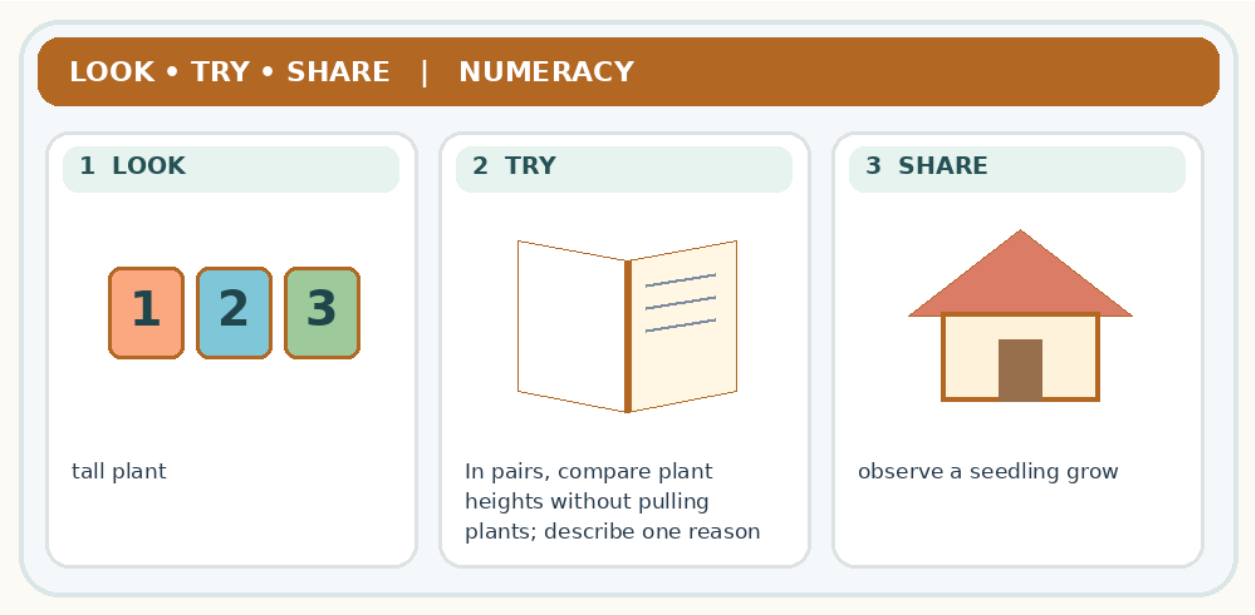

10. After practising Money and fair choices, what is a useful next step?

A. share one observation and listen to feedback B. leave the group without sharing C. tear up other learners work D. claim that feedback is never helpful

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 9. Nature measurements

All Around Us | Term 3

EXPLORE

We can compare how things change by careful measurement. In KG2 we explain our choices and use longer descriptions.

Look for: tall plant, short plant, heavy stone, light leaf

PLAY & APPLY

Activity: In pairs, compare plant heights without pulling plants; describe one reason for your choice

Materials: string and paper ruler

Real life: observe a seedling grow

Remember: Guessing length is not the same as measuring.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Nature measurements?

A. same B. tall plant C. cups D. same colour

2. What is the best activity for practising Nature measurements?

A. leave all materials untouched B. copy without discussing anything C. ignore the instructions and rush D. In pairs, compare plant heights without pulling plants; describe one reason for your choice

3. Which other example helps us explore Nature measurements?

A. short plant B. triangle C. spoons D. chairs

4. Which materials should the group prepare to study Nature measurements?

A. unsafe tools without an adult B. broken objects found at random C. string and paper ruler D. nothing suitable for the task

5. Where can you use what you learnt about Nature measurements?

A. ignore the safety guidance B. avoid talking about the idea C. damage the classroom display D. observe a seedling grow

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Nature measurements?

A. Objects can be counted more than once. B. All objects have exactly the same shape. C. We can compare how things change by careful measurement. In KG2 we explain our choices and use longer descriptions. D. More space always means more objects.

2. A classmate makes a mistake in Nature measurements. Which reminder helps?

A. Guessing length is not the same as measuring. B. All objects have exactly the same shape. C. More space always means more objects. D. Objects can be counted more than once.

3. The class plans to explore Nature measurements. Which action fits?

A. skip the task and claim it is complete B. In pairs, compare plant heights without pulling plants; describe one reason for your choice C. guess without looking at evidence D. mix unrelated ideas without planning

4. Choose a pair of examples that fits Nature measurements.

A. same and cups B. clap-step and large-small C. tall plant and light leaf D. same colour and ten fingers

5. Which materials are most helpful for Nature measurements?

A. unrelated broken electronics B. string and paper ruler C. random objects that cannot help the task D. sharp tools without supervision

6. How could a learner apply Nature measurements outside school?

A. leave a mess after the lesson B. refuse to practise the lesson C. observe a seedling grow D. ignore school or home safety rules

7. Which key word should appear on a Nature measurements revision card?

A. same shape B. heavy stone C. one nose D. two eyes

8. While studying Nature measurements, which choice shows careful learning?

A. change the answer without reviewing B. copy answers without understanding C. rush without listening D. observe, try, explain and check your result

9. Which label belongs on a poster about Nature measurements?

A. price B. square C. rectangle D. light leaf

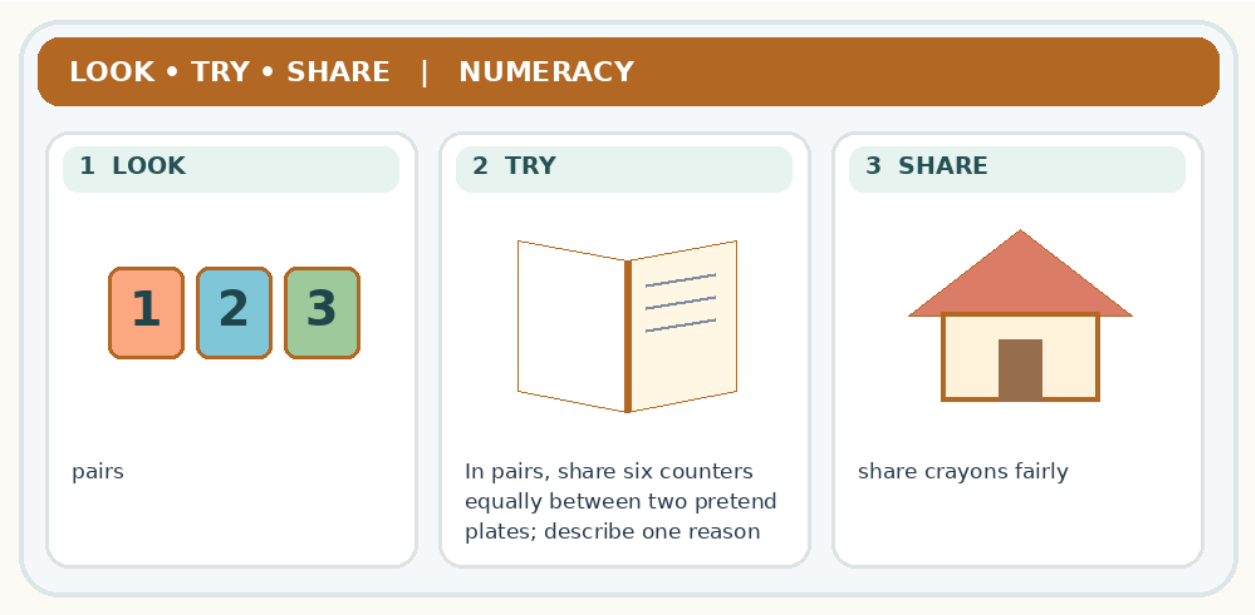

10. After practising Nature measurements, what is a useful next step?

A. tear up other learners work B. claim that feedback is never helpful C. leave the group without sharing D. share one observation and listen to feedback

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 10. Sharing fairly

My Global Community | Term 3

EXPLORE

Equal groups contain the same number of items. In KG2 we explain our choices and use longer descriptions.

Look for: pairs, groups, each, same

PLAY & APPLY

Activity: In pairs, share six counters equally between two pretend plates; describe one reason for your choice

Materials: counters and plate drawings

Real life: share crayons fairly

Remember: Fair sharing does not always mean one object each.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Sharing fairly?

A. same use B. pairs C. dates D. round-square

2. What is the best activity for practising Sharing fairly?

A. copy without discussing anything B. ignore the instructions and rush C. leave all materials untouched D. In pairs, share six counters equally between two pretend plates; describe one reason for your choice

3. Which other example helps us explore Sharing fairly?

A. triangle B. more C. groups D. small

4. Which materials should the group prepare to study Sharing fairly?

A. broken objects found at random B. counters and plate drawings C. unsafe tools without an adult D. nothing suitable for the task

5. Where can you use what you learnt about Sharing fairly?

A. avoid talking about the idea B. ignore the safety guidance C. damage the classroom display D. share crayons fairly

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Sharing fairly?

A. More space always means more objects. B. Objects can be counted more than once. C. Equal groups contain the same number of items. In KG2 we explain our choices and use longer descriptions. D. All objects have exactly the same shape.

2. A classmate makes a mistake in Sharing fairly. Which reminder helps?

A. Fair sharing does not always mean one object each. B. All objects have exactly the same shape. C. More space always means more objects. D. Objects can be counted more than once.

3. The class plans to explore Sharing fairly. Which action fits?

A. skip the task and claim it is complete B. guess without looking at evidence C. mix unrelated ideas without planning D. In pairs, share six counters equally between two pretend plates; describe one reason for your choice

4. Choose a pair of examples that fits Sharing fairly.

A. rectangle and same colour B. round-square and red-blue C. pairs and same D. dates and same use

5. Which materials are most helpful for Sharing fairly?

A. counters and plate drawings B. random objects that cannot help the task C. unrelated broken electronics D. sharp tools without supervision

6. How could a learner apply Sharing fairly outside school?

A. ignore school or home safety rules B. leave a mess after the lesson C. share crayons fairly D. refuse to practise the lesson

7. Which key word should appear on a Sharing fairly revision card?

A. circle B. each C. long D. price

8. While studying Sharing fairly, which choice shows careful learning?

A. change the answer without reviewing B. rush without listening C. observe, try, explain and check your result D. copy answers without understanding

9. Which label belongs on a poster about Sharing fairly?

A. same size B. same C. same shape D. clap-step

10. After practising Sharing fairly, what is a useful next step?

A. tear up other learners work B. claim that feedback is never helpful C. share one observation and listen to feedback D. leave the group without sharing

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.
