Basic 4

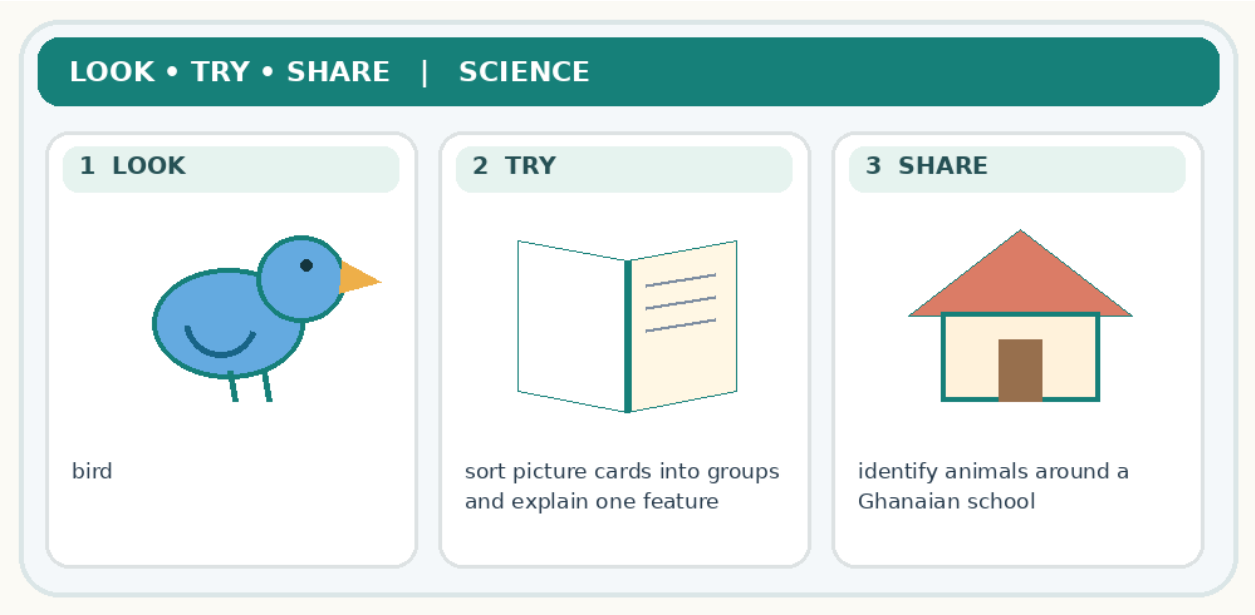

14 illustrated learning units • learner activities • 5 Play + 10 Challenge questions per lesson

Ghana-centred multimedia companion; independently authored and aligned at topic/theme level. Not an official NaCCA publication.

Open Offline_Interactive.html after extracting the package to play the matching narrated MP4s inside the lesson pages.

Lesson 1. Classifying animals

Diversity of Matter | Term 1

EXPLORE

We group animals using body coverings, movement and how they reproduce.

Look for: insect, bird, mammal, reptile

PLAY & APPLY

Activity: sort picture cards into groups and explain one feature

Materials: animal picture cards and notebook

Real life: identify animals around a Ghanaian school

Remember: Grouping animals only by colour can be misleading.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Classifying animals?

A. glass B. water C. roll D. insect

2. What is the best activity for practising Classifying animals?

A. leave all materials untouched B. copy without discussing anything C. ignore the instructions and rush D. sort picture cards into groups and explain one feature

3. Which other example helps us explore Classifying animals?

A. covering coughs B. egg C. bird D. cloud

4. Which materials should the group prepare to study Classifying animals?

A. unsafe tools without an adult B. nothing suitable for the task C. broken objects found at random D. animal picture cards and notebook

5. Where can you use what you learnt about Classifying animals?

A. ignore the safety guidance B. damage the classroom display C. avoid talking about the idea D. identify animals around a Ghanaian school

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Classifying animals?

A. Safety instructions can be ignored during an activity. B. An observation is exactly the same as a guess. C. One example proves that all cases are identical. D. We group animals using body coverings, movement and how they reproduce.

2. A classmate makes a mistake in Classifying animals. Which reminder helps?

A. Grouping animals only by colour can be misleading. B. One example proves that all cases are identical. C. An observation is exactly the same as a guess. D. Safety instructions can be ignored during an activity.

3. The class plans to explore Classifying animals. Which action fits?

A. guess without looking at evidence B. skip the task and claim it is complete C. mix unrelated ideas without planning D. sort picture cards into groups and explain one feature

4. Choose a pair of examples that fits Classifying animals.

A. water and roll B. insect and reptile C. plug and frog D. glass and sun

5. Which materials are most helpful for Classifying animals?

A. random objects that cannot help the task B. animal picture cards and notebook C. sharp tools without supervision D. unrelated broken electronics

6. How could a learner apply Classifying animals outside school?

A. ignore school or home safety rules B. leave a mess after the lesson C. identify animals around a Ghanaian school D. refuse to practise the lesson

7. Which key word should appear on a Classifying animals revision card?

A. mammal B. Sun C. grasshopper D. rain

8. While studying Classifying animals, which choice shows careful learning?

A. rush without listening B. copy answers without understanding C. observe, try, explain and check your result D. change the answer without reviewing

9. Which label belongs on a poster about Classifying animals?

A. heat B. large intestine C. reptile D. Earth

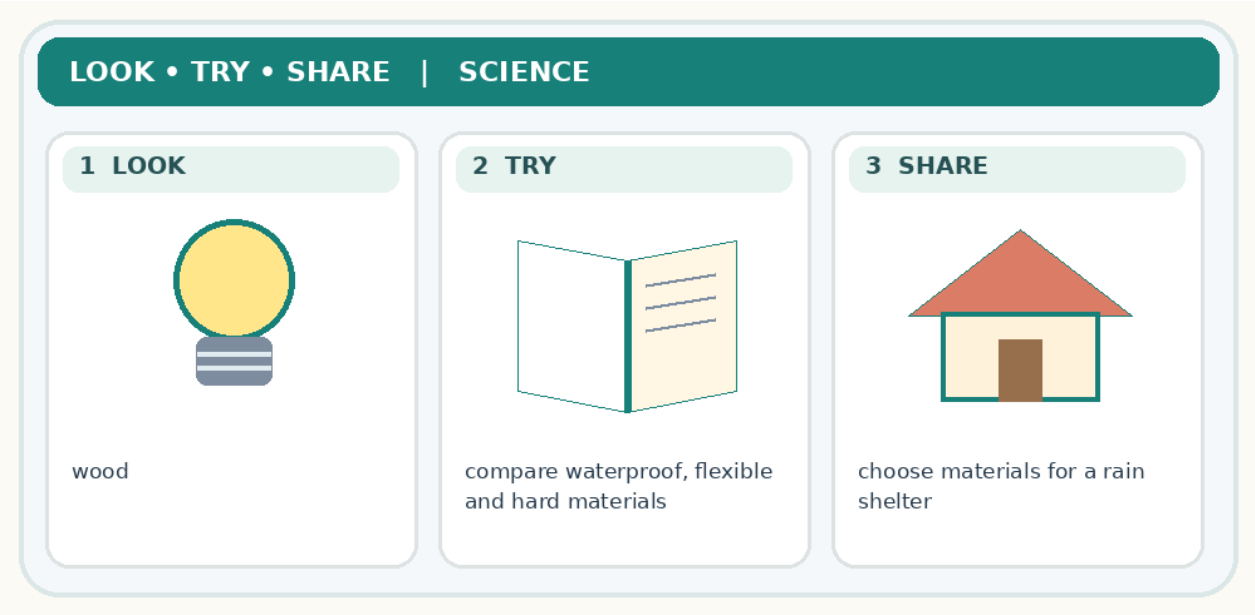

10. After practising Classifying animals, what is a useful next step?

A. claim that feedback is never helpful B. tear up other learners work C. leave the group without sharing D. share one observation and listen to feedback

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 2. Properties of materials

Diversity of Matter | Term 1

EXPLORE

Materials have different strengths, textures and uses.

Look for: wood, metal, plastic, glass

PLAY & APPLY

Activity: compare waterproof, flexible and hard materials

Materials: safe samples and a sorting mat

Real life: choose materials for a rain shelter

Remember: A shiny material is not always metal.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Properties of materials?

A. push B. light C. wood D. stomach

2. What is the best activity for practising Properties of materials?

A. copy without discussing anything B. compare waterproof, flexible and hard materials C. ignore the instructions and rush D. leave all materials untouched

3. Which other example helps us explore Properties of materials?

A. pull B. record C. question D. metal

4. Which materials should the group prepare to study Properties of materials?

A. unsafe tools without an adult B. broken objects found at random C. nothing suitable for the task D. safe samples and a sorting mat

5. Where can you use what you learnt about Properties of materials?

A. avoid talking about the idea B. ignore the safety guidance C. damage the classroom display D. choose materials for a rain shelter

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Properties of materials?

A. An observation is exactly the same as a guess. B. One example proves that all cases are identical. C. Materials have different strengths, textures and uses. D. Safety instructions can be ignored during an activity.

2. A classmate makes a mistake in Properties of materials. Which reminder helps?

A. One example proves that all cases are identical. B. An observation is exactly the same as a guess. C. Safety instructions can be ignored during an activity. D. A shiny material is not always metal.

3. The class plans to explore Properties of materials. Which action fits?

A. skip the task and claim it is complete B. mix unrelated ideas without planning C. compare waterproof, flexible and hard materials D. guess without looking at evidence

4. Choose a pair of examples that fits Properties of materials.

A. stomach and light B. wood and glass C. rain and cloud D. push and reuse

5. Which materials are most helpful for Properties of materials?

A. sharp tools without supervision B. random objects that cannot help the task C. safe samples and a sorting mat D. unrelated broken electronics

6. How could a learner apply Properties of materials outside school?

A. choose materials for a rain shelter B. refuse to practise the lesson C. leave a mess after the lesson D. ignore school or home safety rules

7. Which key word should appear on a Properties of materials revision card?

A. pupa B. plastic C. Sun D. frog

8. While studying Properties of materials, which choice shows careful learning?

A. copy answers without understanding B. observe, try, explain and check your result C. change the answer without reviewing D. rush without listening

9. Which label belongs on a poster about Properties of materials?

A. battery B. clean drain C. glass D. Moon

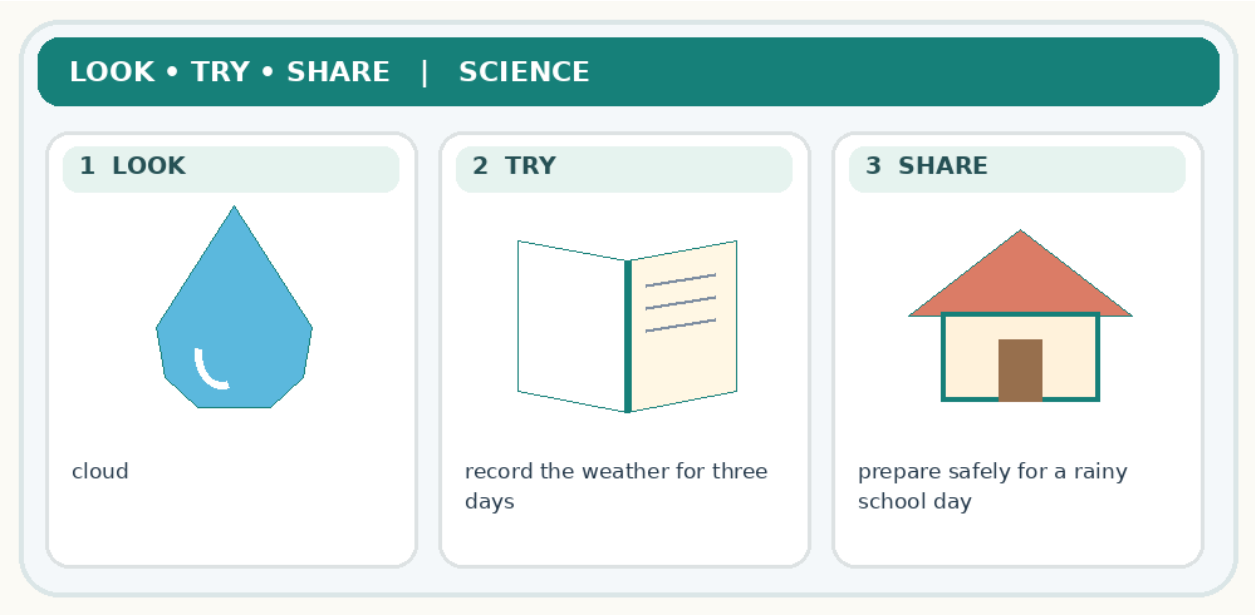

10. After practising Properties of materials, what is a useful next step?

A. share one observation and listen to feedback B. claim that feedback is never helpful C. leave the group without sharing D. tear up other learners work

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 3. Weather and the water around us

Cycles | Term 1

EXPLORE

Sunshine, wind and rain change the environment around us.

Look for: cloud, rain, wind, sun

PLAY & APPLY

Activity: record the weather for three days

Materials: weather chart and pencil

Real life: prepare safely for a rainy school day

Remember: Cloudy skies do not always bring rain.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Weather and the water around us?

A. cloud B. push C. frog D. pupa

2. What is the best activity for practising Weather and the water around us?

A. ignore the instructions and rush B. leave all materials untouched C. copy without discussing anything D. record the weather for three days

3. Which other example helps us explore Weather and the water around us?

A. rain B. rest C. battery D. wood

4. Which materials should the group prepare to study Weather and the water around us?

A. unsafe tools without an adult B. nothing suitable for the task C. broken objects found at random D. weather chart and pencil

5. Where can you use what you learnt about Weather and the water around us?

A. ignore the safety guidance B. avoid talking about the idea C. prepare safely for a rainy school day D. damage the classroom display

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Weather and the water around us?

A. Sunshine, wind and rain change the environment around us. B. Safety instructions can be ignored during an activity. C. An observation is exactly the same as a guess. D. One example proves that all cases are identical.

2. A classmate makes a mistake in Weather and the water around us. Which reminder helps?

A. Cloudy skies do not always bring rain. B. An observation is exactly the same as a guess. C. Safety instructions can be ignored during an activity. D. One example proves that all cases are identical.

3. The class plans to explore Weather and the water around us. Which action fits?

A. record the weather for three days B. guess without looking at evidence C. skip the task and claim it is complete D. mix unrelated ideas without planning

4. Choose a pair of examples that fits Weather and the water around us.

A. Earth and Moon B. cloud and sun C. push and small intestine D. pupa and frog

5. Which materials are most helpful for Weather and the water around us?

A. random objects that cannot help the task B. sharp tools without supervision C. unrelated broken electronics D. weather chart and pencil

6. How could a learner apply Weather and the water around us outside school?

A. prepare safely for a rainy school day B. leave a mess after the lesson C. refuse to practise the lesson D. ignore school or home safety rules

7. Which key word should appear on a Weather and the water around us revision card?

A. bulb B. tree shade C. wind D. caterpillar

8. While studying Weather and the water around us, which choice shows careful learning?

A. copy answers without understanding B. observe, try, explain and check your result C. rush without listening D. change the answer without reviewing

9. Which label belongs on a poster about Weather and the water around us?

A. observation B. sun C. insect D. soap

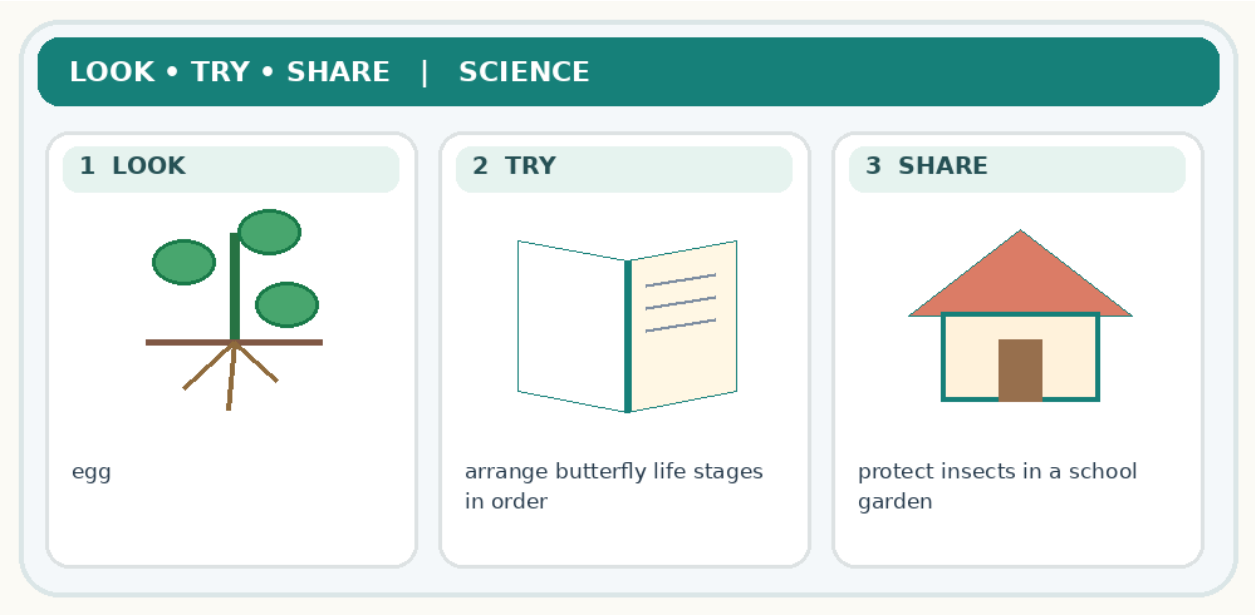

10. After practising Weather and the water around us, what is a useful next step?

A. share one observation and listen to feedback B. leave the group without sharing C. claim that feedback is never helpful D. tear up other learners work

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 4. Life cycle of a butterfly

Cycles | Term 1

EXPLORE

Many insects change through different stages of life.

Look for: egg, caterpillar, pupa, butterfly

PLAY & APPLY

Activity: arrange butterfly life stages in order

Materials: paper life-cycle cards

Real life: protect insects in a school garden

Remember: A caterpillar is a young butterfly, not a different animal.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Life cycle of a butterfly?

A. egg B. bird C. planting D. large intestine

2. What is the best activity for practising Life cycle of a butterfly?

A. ignore the instructions and rush B. leave all materials untouched C. copy without discussing anything D. arrange butterfly life stages in order

3. Which other example helps us explore Life cycle of a butterfly?

A. plastic B. question C. rest D. caterpillar

4. Which materials should the group prepare to study Life cycle of a butterfly?

A. unsafe tools without an adult B. nothing suitable for the task C. paper life-cycle cards D. broken objects found at random

5. Where can you use what you learnt about Life cycle of a butterfly?

A. avoid talking about the idea B. ignore the safety guidance C. protect insects in a school garden D. damage the classroom display

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Life cycle of a butterfly?

A. Many insects change through different stages of life. B. An observation is exactly the same as a guess. C. One example proves that all cases are identical. D. Safety instructions can be ignored during an activity.

2. A classmate makes a mistake in Life cycle of a butterfly. Which reminder helps?

A. Safety instructions can be ignored during an activity. B. An observation is exactly the same as a guess. C. One example proves that all cases are identical. D. A caterpillar is a young butterfly, not a different animal.

3. The class plans to explore Life cycle of a butterfly. Which action fits?

A. mix unrelated ideas without planning B. skip the task and claim it is complete C. arrange butterfly life stages in order D. guess without looking at evidence

4. Choose a pair of examples that fits Life cycle of a butterfly.

A. egg and butterfly B. planting and soap C. Earth and bulb D. bird and large intestine

5. Which materials are most helpful for Life cycle of a butterfly?

A. paper life-cycle cards B. unrelated broken electronics C. random objects that cannot help the task D. sharp tools without supervision

6. How could a learner apply Life cycle of a butterfly outside school?

A. protect insects in a school garden B. ignore school or home safety rules C. refuse to practise the lesson D. leave a mess after the lesson

7. Which key word should appear on a Life cycle of a butterfly revision card?

A. pupa B. push C. cloud D. switch

8. While studying Life cycle of a butterfly, which choice shows careful learning?

A. copy answers without understanding B. rush without listening C. observe, try, explain and check your result D. change the answer without reviewing

9. Which label belongs on a poster about Life cycle of a butterfly?

A. day and night B. water C. wind D. butterfly

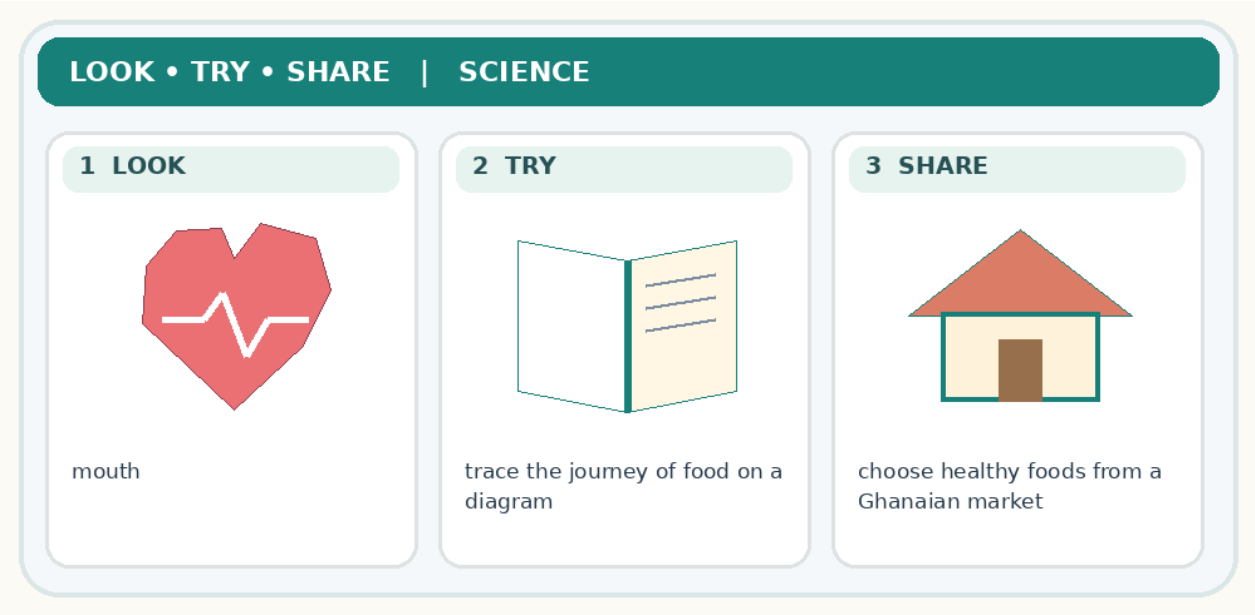

10. After practising Life cycle of a butterfly, what is a useful next step?

A. share one observation and listen to feedback B. leave the group without sharing C. claim that feedback is never helpful D. tear up other learners work

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 5. Our digestive system

Systems | Term 1

EXPLORE

Digestion breaks down food so the body can use nutrients.

Look for: mouth, stomach, small intestine, large intestine

PLAY & APPLY

Activity: trace the journey of food on a diagram

Materials: body outline and paper labels

Real life: choose healthy foods from a Ghanaian market

Remember: Food does not move straight from the mouth to the stomach only.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Our digestive system?

A. mouth B. planting C. plastic D. pupa

2. What is the best activity for practising Our digestive system?

A. copy without discussing anything B. leave all materials untouched C. ignore the instructions and rush D. trace the journey of food on a diagram

3. Which other example helps us explore Our digestive system?

A. rest B. insect C. pull D. stomach

4. Which materials should the group prepare to study Our digestive system?

A. nothing suitable for the task B. unsafe tools without an adult C. body outline and paper labels D. broken objects found at random

5. Where can you use what you learnt about Our digestive system?

A. damage the classroom display B. choose healthy foods from a Ghanaian market C. ignore the safety guidance D. avoid talking about the idea

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Our digestive system?

A. An observation is exactly the same as a guess. B. Digestion breaks down food so the body can use nutrients. C. One example proves that all cases are identical. D. Safety instructions can be ignored during an activity.

2. A classmate makes a mistake in Our digestive system. Which reminder helps?

A. Food does not move straight from the mouth to the stomach only. B. One example proves that all cases are identical. C. An observation is exactly the same as a guess. D. Safety instructions can be ignored during an activity.

3. The class plans to explore Our digestive system. Which action fits?

A. trace the journey of food on a diagram B. skip the task and claim it is complete C. guess without looking at evidence D. mix unrelated ideas without planning

4. Choose a pair of examples that fits Our digestive system.

A. pupa and plastic B. mouth and large intestine C. light and heat D. planting and record

5. Which materials are most helpful for Our digestive system?

A. body outline and paper labels B. sharp tools without supervision C. random objects that cannot help the task D. unrelated broken electronics

6. How could a learner apply Our digestive system outside school?

A. choose healthy foods from a Ghanaian market B. refuse to practise the lesson C. leave a mess after the lesson D. ignore school or home safety rules

7. Which key word should appear on a Our digestive system revision card?

A. mammal B. small intestine C. glass D. soap

8. While studying Our digestive system, which choice shows careful learning?

A. rush without listening B. change the answer without reviewing C. observe, try, explain and check your result D. copy answers without understanding

9. Which label belongs on a poster about Our digestive system?

A. large intestine B. Earth C. bulb D. question

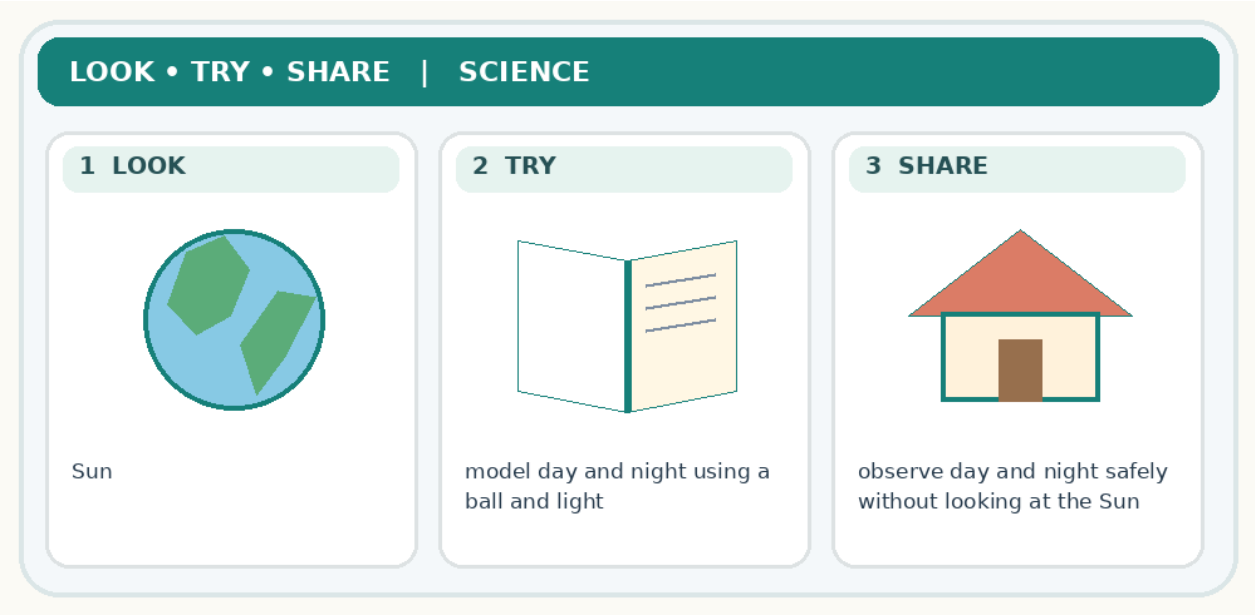

10. After practising Our digestive system, what is a useful next step?

A. share one observation and listen to feedback B. tear up other learners work C. claim that feedback is never helpful D. leave the group without sharing

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 6. The Sun, Earth and Moon

Systems | Term 2

EXPLORE

The Sun provides light and heat while Earth rotates and the Moon moves around Earth.

Look for: Sun, Earth, Moon, day and night

PLAY & APPLY

Activity: model day and night using a ball and light

Materials: balls and a torch handled by an adult

Real life: observe day and night safely without looking at the Sun

Remember: The Sun does not travel around Earth each day.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about The Sun, Earth and Moon?

A. wood B. light C. large intestine D. Sun

2. What is the best activity for practising The Sun, Earth and Moon?

A. leave all materials untouched B. ignore the instructions and rush C. model day and night using a ball and light D. copy without discussing anything

3. Which other example helps us explore The Sun, Earth and Moon?

A. pull B. reptile C. Earth D. small intestine

4. Which materials should the group prepare to study The Sun, Earth and Moon?

A. nothing suitable for the task B. balls and a torch handled by an adult C. broken objects found at random D. unsafe tools without an adult

5. Where can you use what you learnt about The Sun, Earth and Moon?

A. avoid talking about the idea B. damage the classroom display C. ignore the safety guidance D. observe day and night safely without looking at the Sun

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in The Sun, Earth and Moon?

A. Safety instructions can be ignored during an activity. B. The Sun provides light and heat while Earth rotates and the Moon moves around Earth. C. One example proves that all cases are identical. D. An observation is exactly the same as a guess.

2. A classmate makes a mistake in The Sun, Earth and Moon. Which reminder helps?

A. One example proves that all cases are identical. B. An observation is exactly the same as a guess. C. Safety instructions can be ignored during an activity. D. The Sun does not travel around Earth each day.

3. The class plans to explore The Sun, Earth and Moon. Which action fits?

A. mix unrelated ideas without planning B. skip the task and claim it is complete C. model day and night using a ball and light D. guess without looking at evidence

4. Choose a pair of examples that fits The Sun, Earth and Moon.

A. wood and light B. large intestine and mammal C. Sun and day and night D. clean drain and stop

5. Which materials are most helpful for The Sun, Earth and Moon?

A. random objects that cannot help the task B. unrelated broken electronics C. sharp tools without supervision D. balls and a torch handled by an adult

6. How could a learner apply The Sun, Earth and Moon outside school?

A. observe day and night safely without looking at the Sun B. leave a mess after the lesson C. ignore school or home safety rules D. refuse to practise the lesson

7. Which key word should appear on a The Sun, Earth and Moon revision card?

A. sound B. egg C. Moon D. plug

8. While studying The Sun, Earth and Moon, which choice shows careful learning?

A. observe, try, explain and check your result B. rush without listening C. copy answers without understanding D. change the answer without reviewing

9. Which label belongs on a poster about The Sun, Earth and Moon?

A. caterpillar B. plastic C. soap D. day and night

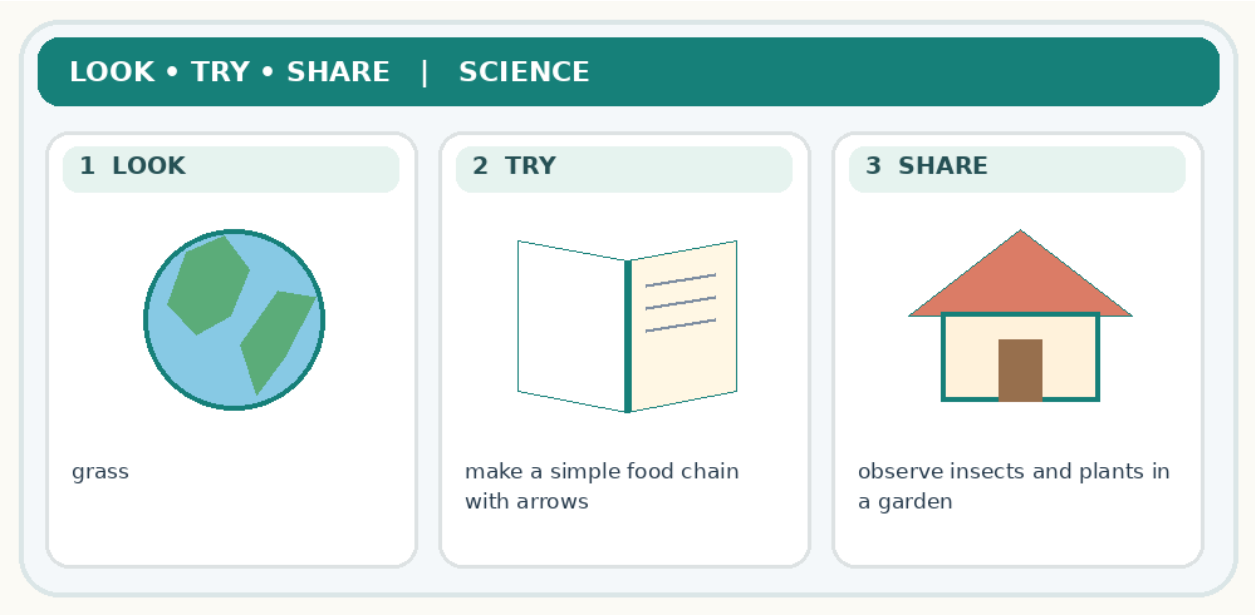

10. After practising The Sun, Earth and Moon, what is a useful next step?

A. tear up other learners work B. claim that feedback is never helpful C. share one observation and listen to feedback D. leave the group without sharing

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 7. Food chains

Systems | Term 2

EXPLORE

Plants and animals depend on one another for food.

Look for: grass, grasshopper, frog, hawk

PLAY & APPLY

Activity: make a simple food chain with arrows

Materials: picture cards and arrows

Real life: observe insects and plants in a garden

Remember: Arrows in food chains show energy moving to the eater.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Food chains?

A. stomach B. record C. grass D. Sun

2. What is the best activity for practising Food chains?

A. copy without discussing anything B. make a simple food chain with arrows C. leave all materials untouched D. ignore the instructions and rush

3. Which other example helps us explore Food chains?

A. grasshopper B. push C. plug D. small intestine

4. Which materials should the group prepare to study Food chains?

A. unsafe tools without an adult B. picture cards and arrows C. nothing suitable for the task D. broken objects found at random

5. Where can you use what you learnt about Food chains?

A. damage the classroom display B. avoid talking about the idea C. ignore the safety guidance D. observe insects and plants in a garden

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Food chains?

A. Plants and animals depend on one another for food. B. An observation is exactly the same as a guess. C. Safety instructions can be ignored during an activity. D. One example proves that all cases are identical.

2. A classmate makes a mistake in Food chains. Which reminder helps?

A. One example proves that all cases are identical. B. Safety instructions can be ignored during an activity. C. An observation is exactly the same as a guess. D. Arrows in food chains show energy moving to the eater.

3. The class plans to explore Food chains. Which action fits?

A. skip the task and claim it is complete B. mix unrelated ideas without planning C. make a simple food chain with arrows D. guess without looking at evidence

4. Choose a pair of examples that fits Food chains.

A. roll and switch B. grass and hawk C. Sun and Earth D. stomach and record

5. Which materials are most helpful for Food chains?

A. unrelated broken electronics B. sharp tools without supervision C. picture cards and arrows D. random objects that cannot help the task

6. How could a learner apply Food chains outside school?

A. observe insects and plants in a garden B. ignore school or home safety rules C. leave a mess after the lesson D. refuse to practise the lesson

7. Which key word should appear on a Food chains revision card?

A. plastic B. rest C. frog D. Moon

8. While studying Food chains, which choice shows careful learning?

A. change the answer without reviewing B. rush without listening C. observe, try, explain and check your result D. copy answers without understanding

9. Which label belongs on a poster about Food chains?

A. metal B. rain C. bulb D. hawk

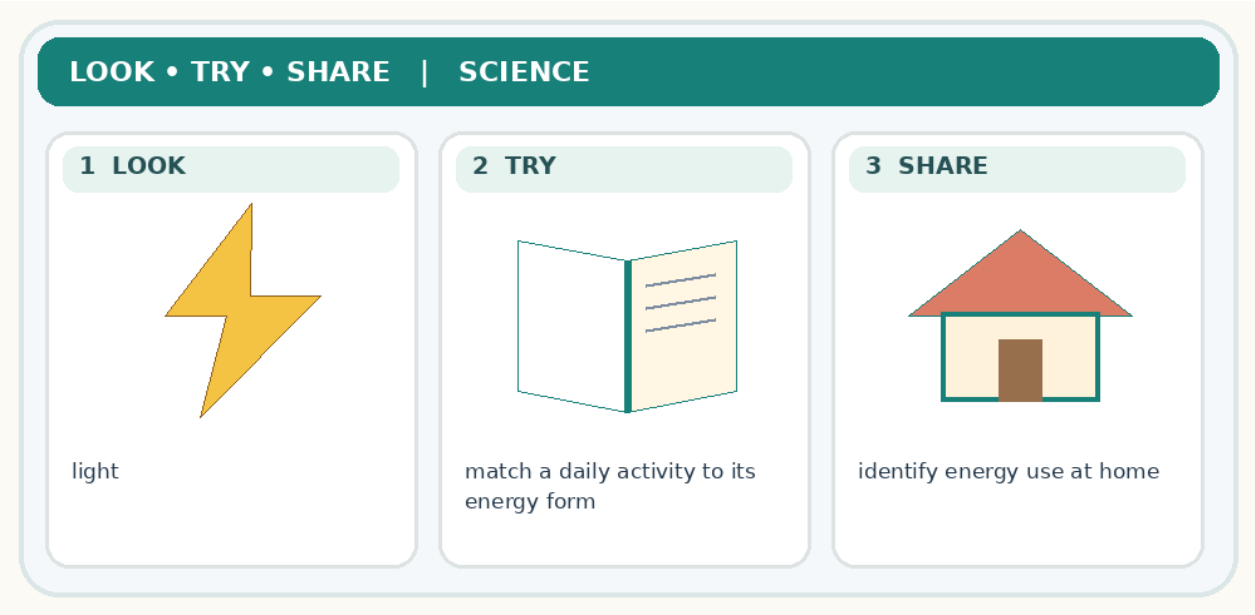

10. After practising Food chains, what is a useful next step?

A. share one observation and listen to feedback B. tear up other learners work C. claim that feedback is never helpful D. leave the group without sharing

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 8. Forms of energy

Forces and Energy | Term 2

EXPLORE

Energy can appear as light, heat, sound and movement.

Look for: light, heat, sound, movement

PLAY & APPLY

Activity: match a daily activity to its energy form

Materials: picture cards and safe instruments

Real life: identify energy use at home

Remember: Energy is not only electricity.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Forms of energy?

A. soap B. rain C. roll D. light

2. What is the best activity for practising Forms of energy?

A. match a daily activity to its energy form B. leave all materials untouched C. ignore the instructions and rush D. copy without discussing anything

3. Which other example helps us explore Forms of energy?

A. Earth B. plug C. small intestine D. heat

4. Which materials should the group prepare to study Forms of energy?

A. broken objects found at random B. unsafe tools without an adult C. picture cards and safe instruments D. nothing suitable for the task

5. Where can you use what you learnt about Forms of energy?

A. damage the classroom display B. identify energy use at home C. avoid talking about the idea D. ignore the safety guidance

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Forms of energy?

A. Energy can appear as light, heat, sound and movement. B. Safety instructions can be ignored during an activity. C. An observation is exactly the same as a guess. D. One example proves that all cases are identical.

2. A classmate makes a mistake in Forms of energy. Which reminder helps?

A. An observation is exactly the same as a guess. B. One example proves that all cases are identical. C. Safety instructions can be ignored during an activity. D. Energy is not only electricity.

3. The class plans to explore Forms of energy. Which action fits?

A. skip the task and claim it is complete B. guess without looking at evidence C. mix unrelated ideas without planning D. match a daily activity to its energy form

4. Choose a pair of examples that fits Forms of energy.

A. cloud and plastic B. roll and rain C. light and movement D. soap and pull

5. Which materials are most helpful for Forms of energy?

A. random objects that cannot help the task B. sharp tools without supervision C. picture cards and safe instruments D. unrelated broken electronics

6. How could a learner apply Forms of energy outside school?

A. identify energy use at home B. ignore school or home safety rules C. leave a mess after the lesson D. refuse to practise the lesson

7. Which key word should appear on a Forms of energy revision card?

A. stop B. sound C. bird D. sun

8. While studying Forms of energy, which choice shows careful learning?

A. observe, try, explain and check your result B. change the answer without reviewing C. copy answers without understanding D. rush without listening

9. Which label belongs on a poster about Forms of energy?

A. frog B. towel C. clean water D. movement

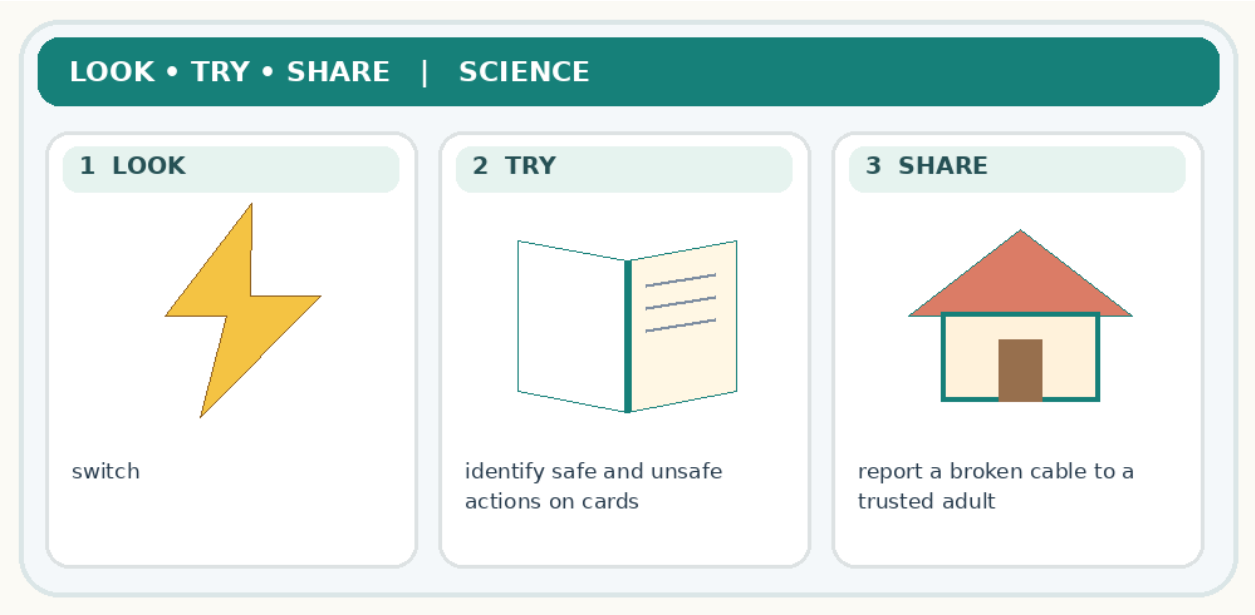

10. After practising Forms of energy, what is a useful next step?

A. tear up other learners work B. claim that feedback is never helpful C. leave the group without sharing D. share one observation and listen to feedback

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 9. Electrical safety

Forces and Energy | Term 2

EXPLORE

Electricity is useful but unsafe wires and sockets can harm us.

Look for: switch, plug, bulb, battery

PLAY & APPLY

Activity: identify safe and unsafe actions on cards

Materials: pictures of electrical objects

Real life: report a broken cable to a trusted adult

Remember: Never touch damaged wires or open wall sockets.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Electrical safety?

A. switch B. glass C. bird D. water

2. What is the best activity for practising Electrical safety?

A. ignore the instructions and rush B. copy without discussing anything C. leave all materials untouched D. identify safe and unsafe actions on cards

3. Which other example helps us explore Electrical safety?

A. insect B. small intestine C. soap D. plug

4. Which materials should the group prepare to study Electrical safety?

A. broken objects found at random B. pictures of electrical objects C. unsafe tools without an adult D. nothing suitable for the task

5. Where can you use what you learnt about Electrical safety?

A. ignore the safety guidance B. avoid talking about the idea C. damage the classroom display D. report a broken cable to a trusted adult

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Electrical safety?

A. Electricity is useful but unsafe wires and sockets can harm us. B. An observation is exactly the same as a guess. C. One example proves that all cases are identical. D. Safety instructions can be ignored during an activity.

2. A classmate makes a mistake in Electrical safety. Which reminder helps?

A. One example proves that all cases are identical. B. Safety instructions can be ignored during an activity. C. Never touch damaged wires or open wall sockets. D. An observation is exactly the same as a guess.

3. The class plans to explore Electrical safety. Which action fits?

A. guess without looking at evidence B. mix unrelated ideas without planning C. skip the task and claim it is complete D. identify safe and unsafe actions on cards

4. Choose a pair of examples that fits Electrical safety.

A. glass and bird B. day and night and sound C. switch and battery D. water and butterfly

5. Which materials are most helpful for Electrical safety?

A. pictures of electrical objects B. unrelated broken electronics C. sharp tools without supervision D. random objects that cannot help the task

6. How could a learner apply Electrical safety outside school?

A. refuse to practise the lesson B. leave a mess after the lesson C. report a broken cable to a trusted adult D. ignore school or home safety rules

7. Which key word should appear on a Electrical safety revision card?

A. bulb B. pull C. stop D. mouth

8. While studying Electrical safety, which choice shows careful learning?

A. rush without listening B. change the answer without reviewing C. copy answers without understanding D. observe, try, explain and check your result

9. Which label belongs on a poster about Electrical safety?

A. battery B. plastic C. movement D. clean drain

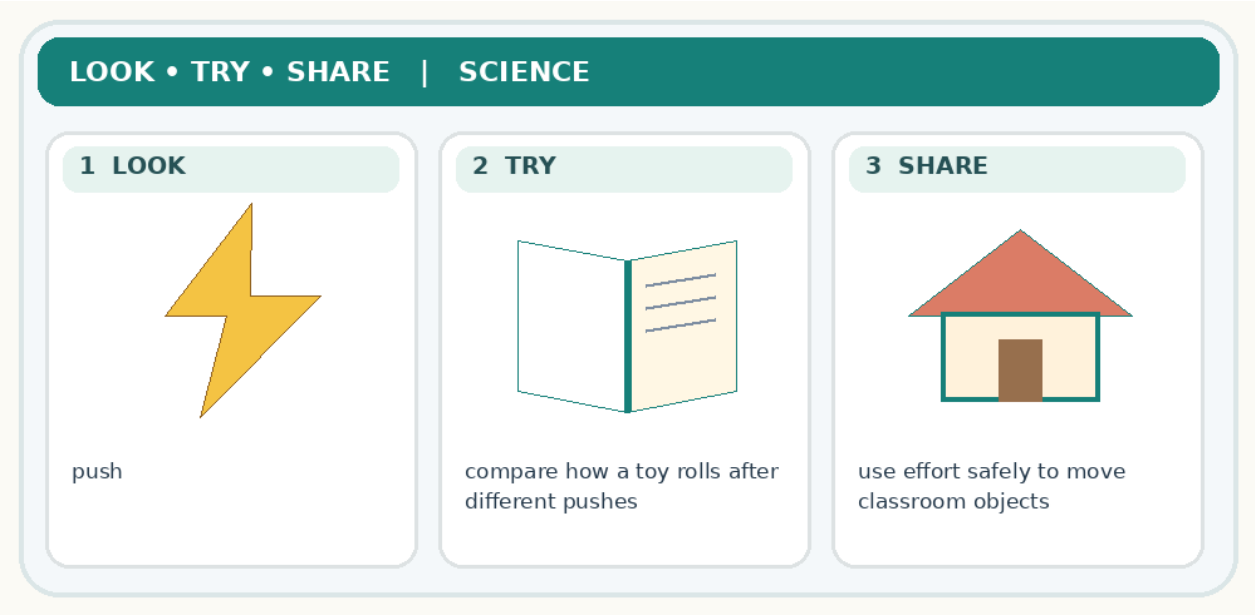

10. After practising Electrical safety, what is a useful next step?

A. leave the group without sharing B. tear up other learners work C. share one observation and listen to feedback D. claim that feedback is never helpful

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 10. Forces and movement

Forces and Energy | Term 2

EXPLORE

A push or pull can change how an object moves.

Look for: push, pull, roll, stop

PLAY & APPLY

Activity: compare how a toy rolls after different pushes

Materials: toy car and smooth board

Real life: use effort safely to move classroom objects

Remember: A force can change speed or direction.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Forces and movement?

A. sound B. insect C. frog D. push

2. What is the best activity for practising Forces and movement?

A. copy without discussing anything B. leave all materials untouched C. compare how a toy rolls after different pushes D. ignore the instructions and rush

3. Which other example helps us explore Forces and movement?

A. light B. egg C. pull D. reuse

4. Which materials should the group prepare to study Forces and movement?

A. toy car and smooth board B. unsafe tools without an adult C. nothing suitable for the task D. broken objects found at random

5. Where can you use what you learnt about Forces and movement?

A. ignore the safety guidance B. damage the classroom display C. avoid talking about the idea D. use effort safely to move classroom objects

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Forces and movement?

A. One example proves that all cases are identical. B. A push or pull can change how an object moves. C. Safety instructions can be ignored during an activity. D. An observation is exactly the same as a guess.

2. A classmate makes a mistake in Forces and movement. Which reminder helps?

A. A force can change speed or direction. B. Safety instructions can be ignored during an activity. C. One example proves that all cases are identical. D. An observation is exactly the same as a guess.

3. The class plans to explore Forces and movement. Which action fits?

A. compare how a toy rolls after different pushes B. skip the task and claim it is complete C. guess without looking at evidence D. mix unrelated ideas without planning

4. Choose a pair of examples that fits Forces and movement.

A. frog and record B. stomach and plastic C. insect and sound D. push and stop

5. Which materials are most helpful for Forces and movement?

A. toy car and smooth board B. random objects that cannot help the task C. unrelated broken electronics D. sharp tools without supervision

6. How could a learner apply Forces and movement outside school?

A. leave a mess after the lesson B. ignore school or home safety rules C. refuse to practise the lesson D. use effort safely to move classroom objects

7. Which key word should appear on a Forces and movement revision card?

A. caterpillar B. rest C. roll D. Moon

8. While studying Forces and movement, which choice shows careful learning?

A. copy answers without understanding B. rush without listening C. observe, try, explain and check your result D. change the answer without reviewing

9. Which label belongs on a poster about Forces and movement?

A. stop B. reptile C. small intestine D. heat

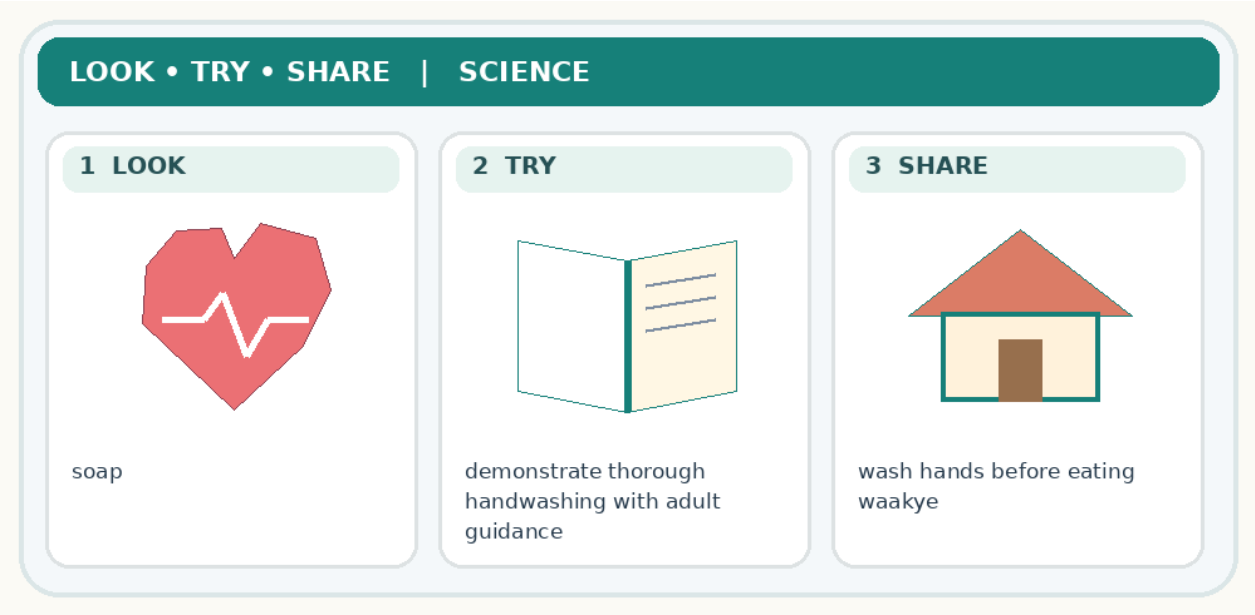

10. After practising Forces and movement, what is a useful next step?

A. claim that feedback is never helpful B. share one observation and listen to feedback C. leave the group without sharing D. tear up other learners work

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 11. Personal hygiene

Humans and the Environment | Term 3

EXPLORE

Handwashing and clean surroundings reduce the spread of germs.

Look for: soap, water, towel, clean desk

PLAY & APPLY

Activity: demonstrate thorough handwashing with adult guidance

Materials: soap and clean water

Real life: wash hands before eating waakye

Remember: Water alone may not remove all germs.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Personal hygiene?

A. heat B. reptile C. soap D. stop

2. What is the best activity for practising Personal hygiene?

A. ignore the instructions and rush B. leave all materials untouched C. copy without discussing anything D. demonstrate thorough handwashing with adult guidance

3. Which other example helps us explore Personal hygiene?

A. caterpillar B. light C. water D. butterfly

4. Which materials should the group prepare to study Personal hygiene?

A. broken objects found at random B. unsafe tools without an adult C. soap and clean water D. nothing suitable for the task

5. Where can you use what you learnt about Personal hygiene?

A. wash hands before eating waakye B. avoid talking about the idea C. damage the classroom display D. ignore the safety guidance

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Personal hygiene?

A. One example proves that all cases are identical. B. Safety instructions can be ignored during an activity. C. An observation is exactly the same as a guess. D. Handwashing and clean surroundings reduce the spread of germs.

2. A classmate makes a mistake in Personal hygiene. Which reminder helps?

A. An observation is exactly the same as a guess. B. Water alone may not remove all germs. C. Safety instructions can be ignored during an activity. D. One example proves that all cases are identical.

3. The class plans to explore Personal hygiene. Which action fits?

A. guess without looking at evidence B. demonstrate thorough handwashing with adult guidance C. skip the task and claim it is complete D. mix unrelated ideas without planning

4. Choose a pair of examples that fits Personal hygiene.

A. soap and clean desk B. pull and pupa C. heat and reptile D. stop and clean drain

5. Which materials are most helpful for Personal hygiene?

A. unrelated broken electronics B. soap and clean water C. random objects that cannot help the task D. sharp tools without supervision

6. How could a learner apply Personal hygiene outside school?

A. wash hands before eating waakye B. leave a mess after the lesson C. ignore school or home safety rules D. refuse to practise the lesson

7. Which key word should appear on a Personal hygiene revision card?

A. question B. towel C. Sun D. insect

8. While studying Personal hygiene, which choice shows careful learning?

A. copy answers without understanding B. change the answer without reviewing C. rush without listening D. observe, try, explain and check your result

9. Which label belongs on a poster about Personal hygiene?

A. movement B. tree shade C. plug D. clean desk

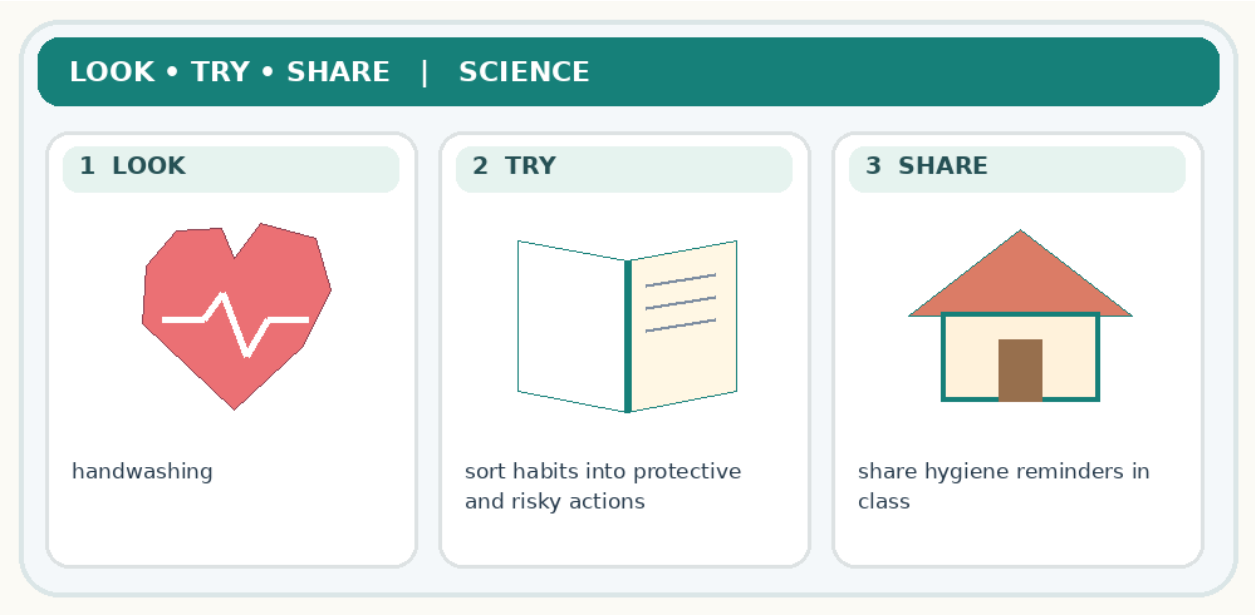

10. After practising Personal hygiene, what is a useful next step?

A. leave the group without sharing B. tear up other learners work C. claim that feedback is never helpful D. share one observation and listen to feedback

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 12. Preventing diseases

Humans and the Environment | Term 3

EXPLORE

Healthy habits help reduce infections and protect a community.

Look for: handwashing, covering coughs, clean water, rest

PLAY & APPLY

Activity: sort habits into protective and risky actions

Materials: health habit cards

Real life: share hygiene reminders in class

Remember: Not every illness spreads from person to person.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Preventing diseases?

A. handwashing B. roll C. small intestine D. heat

2. What is the best activity for practising Preventing diseases?

A. copy without discussing anything B. ignore the instructions and rush C. leave all materials untouched D. sort habits into protective and risky actions

3. Which other example helps us explore Preventing diseases?

A. bulb B. large intestine C. covering coughs D. Earth

4. Which materials should the group prepare to study Preventing diseases?

A. unsafe tools without an adult B. nothing suitable for the task C. broken objects found at random D. health habit cards

5. Where can you use what you learnt about Preventing diseases?

A. avoid talking about the idea B. damage the classroom display C. share hygiene reminders in class D. ignore the safety guidance

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Preventing diseases?

A. One example proves that all cases are identical. B. An observation is exactly the same as a guess. C. Healthy habits help reduce infections and protect a community. D. Safety instructions can be ignored during an activity.

2. A classmate makes a mistake in Preventing diseases. Which reminder helps?

A. One example proves that all cases are identical. B. Safety instructions can be ignored during an activity. C. An observation is exactly the same as a guess. D. Not every illness spreads from person to person.

3. The class plans to explore Preventing diseases. Which action fits?

A. skip the task and claim it is complete B. sort habits into protective and risky actions C. mix unrelated ideas without planning D. guess without looking at evidence

4. Choose a pair of examples that fits Preventing diseases.

A. heat and planting B. water and clean drain C. roll and small intestine D. handwashing and rest

5. Which materials are most helpful for Preventing diseases?

A. random objects that cannot help the task B. unrelated broken electronics C. health habit cards D. sharp tools without supervision

6. How could a learner apply Preventing diseases outside school?

A. leave a mess after the lesson B. refuse to practise the lesson C. ignore school or home safety rules D. share hygiene reminders in class

7. Which key word should appear on a Preventing diseases revision card?

A. reptile B. plastic C. Sun D. clean water

8. While studying Preventing diseases, which choice shows careful learning?

A. copy answers without understanding B. rush without listening C. observe, try, explain and check your result D. change the answer without reviewing

9. Which label belongs on a poster about Preventing diseases?

A. rest B. frog C. Moon D. record

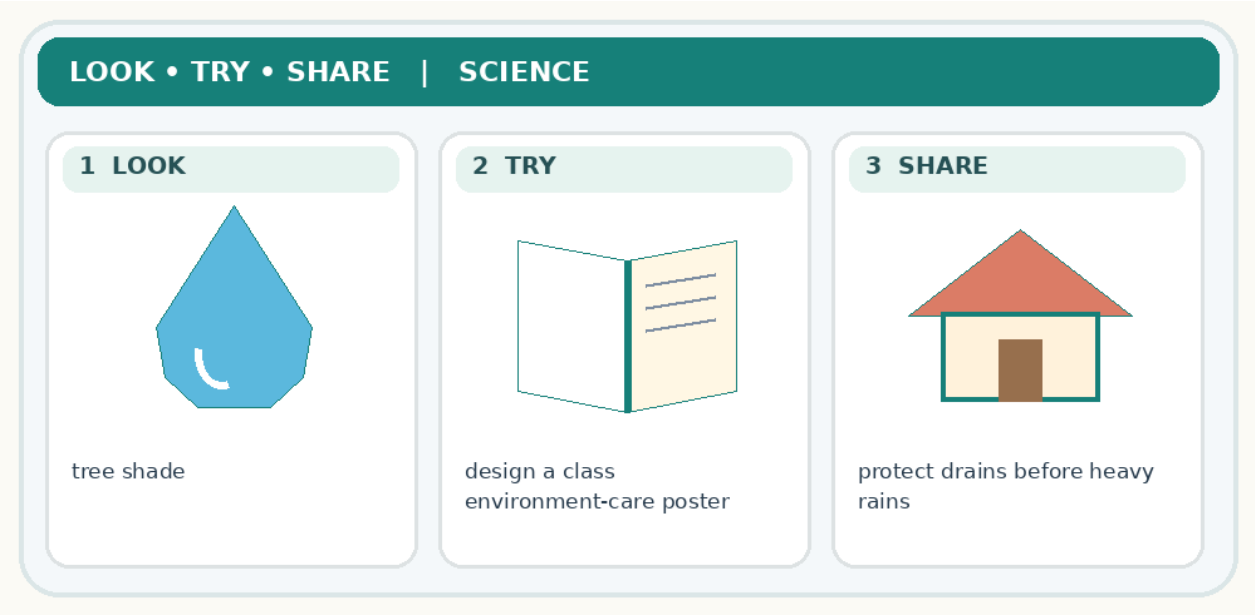

10. After practising Preventing diseases, what is a useful next step?

A. share one observation and listen to feedback B. leave the group without sharing C. tear up other learners work D. claim that feedback is never helpful

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 13. Climate change and care

Humans and the Environment | Term 3

EXPLORE

Trees and thoughtful choices help us care for the environment.

Look for: tree shade, reuse, planting, clean drain

PLAY & APPLY

Activity: design a class environment-care poster

Materials: reused paper and plant photos

Real life: protect drains before heavy rains

Remember: One cold day does not prove climate change has stopped.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Climate change and care?

A. grass B. tree shade C. clean desk D. heat

2. What is the best activity for practising Climate change and care?

A. ignore the instructions and rush B. copy without discussing anything C. leave all materials untouched D. design a class environment-care poster

3. Which other example helps us explore Climate change and care?

A. wood B. Sun C. roll D. reuse

4. Which materials should the group prepare to study Climate change and care?

A. reused paper and plant photos B. broken objects found at random C. nothing suitable for the task D. unsafe tools without an adult

5. Where can you use what you learnt about Climate change and care?

A. damage the classroom display B. protect drains before heavy rains C. ignore the safety guidance D. avoid talking about the idea

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Climate change and care?

A. Safety instructions can be ignored during an activity. B. An observation is exactly the same as a guess. C. One example proves that all cases are identical. D. Trees and thoughtful choices help us care for the environment.

2. A classmate makes a mistake in Climate change and care. Which reminder helps?

A. One cold day does not prove climate change has stopped. B. Safety instructions can be ignored during an activity. C. One example proves that all cases are identical. D. An observation is exactly the same as a guess.

3. The class plans to explore Climate change and care. Which action fits?

A. mix unrelated ideas without planning B. design a class environment-care poster C. guess without looking at evidence D. skip the task and claim it is complete

4. Choose a pair of examples that fits Climate change and care.

A. heat and clean desk B. tree shade and clean drain C. light and switch D. grass and plug

5. Which materials are most helpful for Climate change and care?

A. sharp tools without supervision B. reused paper and plant photos C. random objects that cannot help the task D. unrelated broken electronics

6. How could a learner apply Climate change and care outside school?

A. leave a mess after the lesson B. protect drains before heavy rains C. ignore school or home safety rules D. refuse to practise the lesson

7. Which key word should appear on a Climate change and care revision card?

A. plastic B. planting C. observation D. movement

8. While studying Climate change and care, which choice shows careful learning?

A. copy answers without understanding B. rush without listening C. change the answer without reviewing D. observe, try, explain and check your result

9. Which label belongs on a poster about Climate change and care?

A. insect B. bird C. clean drain D. pupa

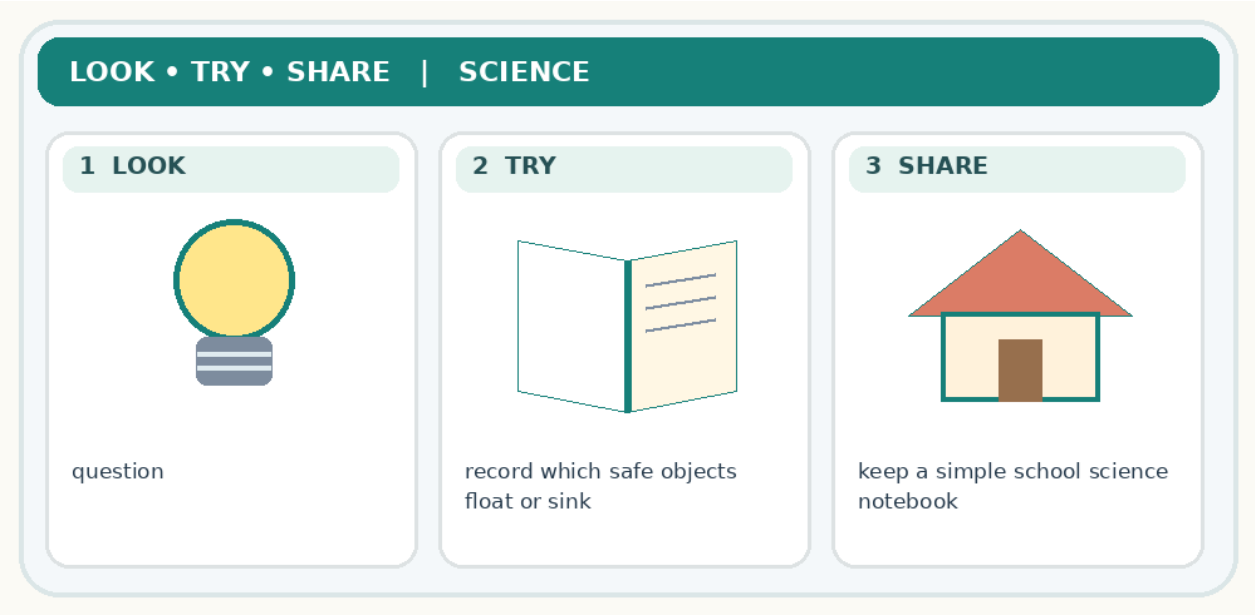

10. After practising Climate change and care, what is a useful next step?

A. claim that feedback is never helpful B. leave the group without sharing C. tear up other learners work D. share one observation and listen to feedback

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

Lesson 14. Working like a scientist

Humans and the Environment | Term 3

EXPLORE

Scientists observe, ask questions, test fairly and record results.

Look for: question, prediction, observation, record

PLAY & APPLY

Activity: record which safe objects float or sink

Materials: cup of water and paper

Real life: keep a simple school science notebook

Remember: A guess is not the same as a careful observation.

Partner talk: What did you notice? Can you give a reason for your answer?

PLAY QUESTIONS

1. Which example is connected with this lesson about Working like a scientist?

A. stop B. rest C. question D. Sun

2. What is the best activity for practising Working like a scientist?

A. leave all materials untouched B. copy without discussing anything C. record which safe objects float or sink D. ignore the instructions and rush

3. Which other example helps us explore Working like a scientist?

A. large intestine B. insect C. covering coughs D. prediction

4. Which materials should the group prepare to study Working like a scientist?

A. unsafe tools without an adult B. cup of water and paper C. broken objects found at random D. nothing suitable for the task

5. Where can you use what you learnt about Working like a scientist?

A. keep a simple school science notebook B. damage the classroom display C. ignore the safety guidance D. avoid talking about the idea

CHALLENGE QUESTIONS

1. Which explanation best describes our main idea in Working like a scientist?

A. Scientists observe, ask questions, test fairly and record results. B. An observation is exactly the same as a guess. C. One example proves that all cases are identical. D. Safety instructions can be ignored during an activity.

2. A classmate makes a mistake in Working like a scientist. Which reminder helps?

A. A guess is not the same as a careful observation. B. An observation is exactly the same as a guess. C. Safety instructions can be ignored during an activity. D. One example proves that all cases are identical.

3. The class plans to explore Working like a scientist. Which action fits?

A. skip the task and claim it is complete B. guess without looking at evidence C. mix unrelated ideas without planning D. record which safe objects float or sink

4. Choose a pair of examples that fits Working like a scientist.

A. reuse and hawk B. question and record C. Sun and butterfly D. rest and stop

5. Which materials are most helpful for Working like a scientist?

A. unrelated broken electronics B. cup of water and paper C. sharp tools without supervision D. random objects that cannot help the task

6. How could a learner apply Working like a scientist outside school?

A. leave a mess after the lesson B. keep a simple school science notebook C. refuse to practise the lesson D. ignore school or home safety rules

7. Which key word should appear on a Working like a scientist revision card?

A. observation B. cloud C. mouth D. stomach

8. While studying Working like a scientist, which choice shows careful learning?

A. change the answer without reviewing B. rush without listening C. observe, try, explain and check your result D. copy answers without understanding

9. Which label belongs on a poster about Working like a scientist?

A. wind B. sun C. movement D. record

10. After practising Working like a scientist, what is a useful next step?

A. share one observation and listen to feedback B. leave the group without sharing C. tear up other learners work D. claim that feedback is never helpful

Discuss the reasons for your choices with a partner. Practical performance and teacher observation matter as well as quiz answers.

TEACHER ANSWER KEY

Lesson 1 — Classifying animals: 1:D 2:D 3:C 4:D 5:D 6:D 7:A 8:D 9:B 10:B 11:C 12:A 13:C 14:C 15:D

Lesson 2 — Properties of materials: 1:C 2:B 3:D 4:D 5:D 6:C 7:D 8:C 9:B 10:C 11:A 12:B 13:B 14:C 15:A
